CITY OF ONTARIO
DEVELOPMENT ADVISORY BOARD

AGENDA

March 6, 2023

▶ **All documents for public review are on file in the Planning Department located in City Hall at 303 East "B" St., Ontario, CA 91764 and on the city's website at ontarioca.gov/Agendas/DAB**

MEETING WILL BE HELD AT 1:30 PM IN ONTARIO CITY COUNCIL CHAMBERS LOCATED AT 303 East "B" St.

Scott Ochoa, City Manager
Scott Murphy, Executive Director, Community Development Agency
Jennifer McLain Hiramoto, Executive Director, Economic Development
James Caro, Building Official
Rudy Zeledon, Planning Director
Khoi Do, City Engineer
Chief Michael Lorenz, Police Department
Fire Marshal Paul Ehrman, Fire Department
Scott Burton, Utilities General Manager
Angela Magana, Community Improvement Manager

PUBLIC COMMENTS

Citizens wishing to address the Development Advisory Board on any matter that is not on the agenda may do so at this time. Please state your name and address clearly for the record and limit your remarks to five minutes.

Please note that while the Development Advisory Board values your comments, the members cannot respond nor take action until such time as the matter may appear on the forthcoming agenda.

AGENDA ITEMS

For each of the items listed below the public will be provided an opportunity to speak. After a staff report is provided, the chairperson will open the public hearing. At that time the applicant will be allowed five (5) minutes to make a presentation on the case. Members of the public will then be allowed five (5) minutes each to speak. The Development Advisory Board may ask the speakers questions relative to the case and the testimony provided. The question period will not count against your time limit. After all persons have spoken, the applicant will be allowed three minutes to summarize or rebut any public testimony. The chairperson will then close the public hearing portion of the hearing and deliberate the matter.

CONSENT CALENDAR ITEMS

A. MINUTES APPROVAL

Development Advisory Board Minutes of February 22, 2023, approved as written.

PUBLIC HEARING ITEMS

B. ENVIRONMENTAL ASSESSMENT AND TENTATIVE PARCEL MAP AND DEVELOPMENT PLAN REVIEW FOR FILE NOS. PMTT20-011 AND PDEV20-028: A public hearing to consider Tentative Parcel Map No. 20161 (File No. PMTT20-011), subdividing 159.95 acres of land into 10 parcels, and a Development Plan (File No. PDEV20-028) to construct 10 industrial buildings totaling 3,021,375 square feet on land bordered by Eucalyptus Avenue to the north, Bon View Avenue to the west, Merrill Avenue to the south, and Grove Avenue to the east, within the Industrial and Business Park land use districts of the South Ontario Logistics Center Specific Plan. The environmental impacts of this project were previously reviewed in conjunction with the South Ontario Logistics Center Specific Plan, (File No. PSP19-001) Environmental Impact Report (State Clearinghouse No. 2021010318) was certified by the City Council on March 1, 2022. This application introduces no new significant environmental impacts. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan. The project site is also located within the Airport Influence area of Chino Airport and was evaluated and found to be consistent with the policies and criteria of the Chino Airport Land Use Compatibility Plan.; (APNs: 1054-071-01, 1054-071-02, 1054-081-03, 1054-091-01, 1054-091-02, 1054-101-01, 1054-101-02, 1054-231-01, 1054-231-02, 1054-241-01, 1054-241-02, 1054-311-01, 1054-311-02, 1054-321-01, and 1054-321-02) **submitted by Grove Land Ventures LLC. Planning Commission action is required for PMTT20-011.**

1. Continued - File Nos. PDEV20-028 & PMTT20-011 (TPM 20161)

City staff is asking that this item be continued to the March 20, 2023 meeting.

C. ENVIRONMENTAL ASSESSMENT, TENTATIVE PARCEL MAP AND DEVELOPMENT PLAN REVIEW FOR FILE NOS. PMTT22-017 AND PDEV22-025: A hearing to consider Tentative Parcel Map No. 20582 (File No. PMTT22-017), subdividing 10.05 acres of land into two parcels in conjunction with a Development Plan (File No. PDEV22-025) to raze six existing industrial buildings totaling 77,696 square feet and construct two industrial buildings totaling 237,236 square feet on property located at 605, 621, and 627 South Bon View Avenue, 954 East Ontario Boulevard, and 1031 East California Street, within the IG (General Industrial) zoning district. An Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364), certified by the City Council on August 16, 2022, was prepared. This application introduces no new significant environmental impacts. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan; (APN: 1049-181-14) **submitted by WPT Capital Advisors, LLC. Planning Commission action is required.**

1. **CEQA Determination**

   Motion to recommend Approval/Denial of an Addendum to a previous EIR

2. **File Nos. PMTT22-017 & PDEV22-025** (Conditional Use Permit & Development Plan)

   Motion to recommend Approval/Denial

D. **ENVIRONMENTAL ASSESSMENT AND TENTATIVE PARCEL MAP REVIEW FOR FILE NO. PMTT22-028:** A hearing to consider Tentative Parcel Map No. 20683, subdividing 9.11 acres of land into 4 parcels generally bordered by D Street to the north, Sultana Avenue to the east, B Street to the south, and Plum Avenue to the west, on properties addressed as 320 East D Street, 425 East B Street, and 200 North Cherry Avenue, within the OL (Low Office Intensity) and CIV zoning districts. The project is categorically exempt from the requirements of the California Environmental Quality Act (CEQA) pursuant to Section 15315 (Class 15, Minor Land Divisions) of the CEQA Guidelines. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan; (APNs: 1048-541-15; 1048-545-16). **City Initiated. Planning Commission action is required.**

1. **CEQA Determination**

   No action necessary – Exempt: CEQA Guidelines Section § 15315

2. **File No. PMTT22-028 (TPM 20683)** (Tentative Parcel Map)

   Motion to recommend Approval/Denial

If you wish to appeal a decision of the **Development Advisory Board**, you must do so within ten (10) days of the **Development Advisory Board** action. Please contact the **Planning Department** for information regarding the appeal process.

If you challenge any action of the **Development Advisory Board** in court, you may be limited to raising only those issues you or someone else raised at the public hearing described in this notice, or in written correspondence delivered to the **Development Advisory Board** at, or prior to, the public hearing.

The next **Development Advisory Board** meets on **March 20, 2023**.

I, Gwen Berendsen, Administrative Assistant of the City of Ontario, or my designee, hereby certify that a true, accurate copy of the foregoing agenda was posted on or before **March 2, 2023**, at least 72 hours prior to the meeting per Government Code Section 54954.2 at 303 East "B" Street, Ontario.

Gwen Berendsen
Administrative Assistant

PUBLIC COMMENTS

No person from the public wished to speak.

CONSENT CALENDAR ITEMS

A. **APPROVAL OF MINUTES:** Motion to approve the minutes of the January 18, 2023 meeting of the Development Advisory Board was made by Ms. Hernandez; seconded by Mr. Ehrman; and approved unanimously by those present (6-0).

PUBLIC HEARING ITEMS

B. **ENVIRONMENTAL ASSESSMENT AND DEVELOPMENT PLAN REVIEW FOR FILE NO. PDEV22-046:** A Development Plan to construct a wireless telecommunications facility consisting of a stealth, 67-foot-tall monopine antenna and ancillary ground-mounted equipment, on approximately 530 square feet of leased space on 2.05-acre of land located at 3500 East Francis Street, within the Rail Industrial land use district of the California Commerce Center Specific Plan. The project is categorically exempt from the requirements of the California Environmental Quality Act (CEQA) pursuant to Section 15303 (Class 3, New Construction or Conversion of Small

Structures) of the CEQA Guidelines. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan (ALUCP); (APN: 0211-281-56) **submitted by AT&T Mobility.**

Mr. Zeledon opened the public hearing.

Stella Shih with Reliable Services was present.

Mr. Zeledon asked if she had reviewed and agreed with all the Conditions of Approval.

Ms. Shih stated she had and agreed with the Conditions of Approval and asked regarding the timeline for the approval letter.

Mr. Zeledon stated there is a 10 day appeal process, upon which the decision is final.

As there was no one else wishing to speak on this item, Mr. Zeledon closed the public hearing.

Motion to approve **File No. PDEV22-046** subject to conditions, was made by Mr. Caro; seconded by Ms. Zavala; and approved unanimously by those present (6-0).

C. **ENVIRONMENTAL ASSESSMENT, TENTATIVE PARCEL MAP, AND DEVELOPMENT PLAN REVIEW FOR FILE NOS. PMTT22-015 AND PDEV22-024:** A hearing to consider Tentative Parcel Map No. 20554 (File No. PMTT22-015), subdividing 0.11-acre of land into one lot for condominium purposes, and a Development Plan (File No. PDEV22-024) for the construction of three townhomes units located at 213 North Fern Avenue, within the MU-1/LUA-3 (Downtown Mixed Use/Holt Boulevard) zoning district. The project is categorically exempt from the requirements of the California Environmental Quality Act (CEQA) pursuant to Section 15332 (Class 32, In-fill Development Projects) of the CEQA Guidelines. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan; (APN: 1048-572-06) **submitted by HDC Construction. Planning Commission action is required.**

Mr. Zeledon opened the public hearing.

Tamara Soussan representing HDC Construction was present.

Mr. Zeledon asked if she had reviewed all the Conditions of Approval.

Ms. Soussan stated she had no questions and agreed with the Conditions of Approval.

As there was no one else wishing to speak on this item, Mr. Zeledon closed the public hearing.

Motion to recommend approval of **File Nos. PMTT22-015 (TPM 20554) and PDEV22-024** subject to conditions, to the Planning Commission was made by Ms. Hernandez; seconded by Mr. Caro; and recommended unanimously by those present (6-0).

D. **ENVIRONMENTAL ASSESSMENT AND DEVELOPMENT PLAN REVIEW FOR FILE NO. PDEV22-030:** A hearing to consider a Development Plan to construct a wireless telecommunication facility (Dish Wireless, LLC) consisting of a non-stealth antenna array installed

on an existing SCE transmission tower and a 150-square-foot ground-mounted equipment enclosure on 15.4 acres of land located on the east side of Deer Creek Loop, approximately 200 feet south of Elsinore Way, within the Non-Recreational Open Space land use district of the Creekside Specific Plan. The project is categorically exempt from the requirements of the California Environmental Quality Act (CEQA) pursuant to Section 15303 (Class 3, New Construction or Conversion of Small Structures) of the CEQA Guidelines. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan; (APNs: 1083-281-01) **submitted by Dish Wireless, LLC. Planning Commission action is required.**

Mr. Zeledon opened the public hearing.

Mitchell Yahata was present.

Mr. Zeledon asked if he had reviewed all the Conditions of Approval.

Mr. Yahata stated he had and agreed with the Conditions of Approval.

As there was no one else wishing to speak on this item, Mr. Zeledon closed the public hearing.

Motion to recommend approval of **File No. PDEV22-030** subject to conditions, to the Planning Commission was made by Ms. Stevens; seconded by Mr. Ehrman; and recommended unanimously by those present (6-0).

There being no further business, the meeting was adjourned to the next meeting on March 6, 2023.

Respectfully submitted,

Gwen Berendsen

Gwen Berendsen
Recording Secretary

CITY OF ONTARIO
MEMORANDUM

TO: **Development Advisory Board**

FROM: **Rudy Zeledon, Planning Director**

DATE: **March 6, 2023**

SUBJECT: **ENVIRONMENTAL ASSESSMENT AND TENTATIVE PARCEL MAP AND DEVELOPMENT PLAN REVIEW FOR FILE NOS. PMTT20-011 AND PDEV20-028:** A public hearing to consider Tentative Parcel Map No. 20161 (File No. PMTT20-011), subdividing 159.95 acres of land into 10 parcels, and a Development Plan (File No. PDEV20-028) to construct 10 industrial buildings totaling 3,021,375 square feet on land bordered by Eucalyptus Avenue to the north, Bon View Avenue to the west, Merrill Avenue to the south, and Grove Avenue to the east, within the Industrial and Business Park land use districts of the South Ontario Logistics Center Specific Plan. The environmental impacts of this project were previously reviewed in conjunction with the South Ontario Logistics Center Specific Plan, (File No. PSP19-001) Environmental Impact Report (State Clearinghouse No. 2021010318) was certified by the City Council on March 1, 2022. This application introduces no new significant environmental impacts. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan. The project site is also located within the Airport Influence area of Chino Airport and was evaluated and found to be consistent with the policies and criteria of the Chino Airport Land Use Compatibility Plan.; (APNs: 1054-071-01, 1054-071-02, 1054-081-03, 1054-091-01, 1054-091-02, 1054-101-01, 1054-101-02, 1054-231-01, 1054-231-02, 1054-241-01, 1054-241-02, 1054-311-01, 1054-311-02, 1054-321-01, and 1054-321-02) **submitted by Grove Land Ventures LLC. Planning Commission action is required for PMTT20-011.**

City staff is requesting that this item be continued to the March 20, 2023 Development Advisory Board meeting, to give staff time to finalize the Conditions of Approval.

CITY OF ONTARIO PLANNING DEPARTMENT

DEVELOPMENT ADVISORY BOARD DECISION

March 6, 2023

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

DECISION NO.: [insert #]

FILE NOS.: PMTT22-017 and PDEV22-025 – SEIR Addendum

DESCRIPTION: A Public Hearing to consider the use of an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report ("Certified SEIR") for Tentative Parcel Map No. 20582 (File No. PMTT22-017), subdividing 10.05 acres of land into two parcels, in conjunction with a Development Plan (File No. PDEV22-025) to raze six existing industrial buildings totaling 77,696 square feet and construct two new industrial buildings totaling 237,236 square feet on property located at 605, 621, and 627 South Bon View Avenue, 954 East Ontario Boulevard, and 1031 East California Street; (APN: 1049-181-14); **submitted by WPT Capital Advisors, LLC. Planning Commission action is required.**

PART 1: BACKGROUND & ANALYSIS

WPT CAPTIAL ADVISORS, LLC, ((herein after referred to as "Applicant") has filed an application requesting approval of an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report ("Certified SEIR") for a Tentative Parcel Map No. 20582, File No. PMTT22-017, and a Development Plan, File No. PDEV22-025, as described in the subject of this Decision (herein after referred to as "Application" or "Project").

PROJECT SETTING: The project site is comprised of 10.05 acres of land located at 605, 621, and 627 South Bon View Avenue, 954 East Ontario Boulevard, and 1031 East California Street, and is depicted in Exhibit A: Project Location Map, attached. Existing land uses, Policy Plan (general plan) and zoning designations, and specific plan land uses on and surrounding the project site are as follows:

	Existing Land Use	***Policy Plan Land Use Designation***	***Zoning Designation***	***Specific Plan Land Use Designation***
Site:	Industrial	Industrial (0.55 FAR)	IG (General Industrial)	N/A
North:	Industrial, Union Pacific Railroad	Industrial (0.55 FAR) & Rail	IG (General Industrial) & RC (Rail Corridor)	N/A
South:	Industrial, Single-Family Residential, Vacant	Business Park (BP, 0.6 FAR)	IG (General Industrial), IL (Light Industrial)	N/A
East:	Industrial	Industrial (0.55 FAR)	IG (General Industrial)	N/A
West:	Industrial	Industrial (0.55 FAR)	IG (General Industrial)	N/A

PROJECT DESCRIPTION:

The Project analyzed under the Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report ("Certified SEIR") consists of Tentative Parcel Map No. 20582 (File No. PMTT22-017), subdividing the 10.05-acre project site into two parcels to accommodate a Development Plan (File No. PDEV22-025), to construct two industrial buildings totaling 237,236 square feet. The Project includes associated on-site improvements such as parking lots, truck yard and trailer storage, landscaping, pedestrian paths, and outdoor employee break areas. The Project's off-site improvements include, but are not limited to, new and rehabilitated landscaping within the parkways, repairing and replacing deteriorated and/or damage pavement, new driveway approaches, and new sidewalks.

The Application is a project pursuant to the California Environmental Quality Act (Public Resources Code Section 21000 et seq.) ("CEQA") and an Initial Study/Addendum has been prepared to determine possible environmental impacts. Although the proposed project could have a significant effect on the environment, because all potentially significant effects have been analyzed adequately in an earlier Certified SEIR, and have been avoided or mitigated pursuant to that earlier Certified SEIR, including revisions or mitigation measures that are imposed on the proposed project, nothing further is required. The Project will introduce no new significant environmental impacts beyond those previously analyzed in the Certified SEIR, and all mitigation measures previously adopted by the Environmental Impact Report, are a condition of project approval and are incorporated in the Initial Study/Addendum (see Attachment A—Initial Study/Addendum, attached).

ENVIRONMENTAL REVIEW: An Addendum was prepared for the Project, which included an array of studies and assessments (see Attachment A to the Addendum report: Addendum and Studies). A summary of each study is as follows:

a) Air Quality, Health Risk Assessment ("HRA"), Greenhouse Gas ("GHG") and Energy Impact Report — The report analyzed existing air quality, air quality and GHG emissions generated from Project-related sources, regional air pollution, and global climate change, as well as energy use resulting from implementation of the proposed Project and whether the Project would result in wasteful, inefficient, or unnecessary consumption of energy resources or confliction with any applicable plans for renewable energy and energy efficiency. The report also reviewed all TOP 2050 SEIR mitigation measures applicable to the proposed Project.

Overall, the report found that the Project, as proposed, is consistent with the findings and mitigation measures listed in TOP 2050 SEIR, as well as CALGreen Codes, and that the proposed Project would not conflict with or obstruct implementation of SCAQMD air quality plans. Further, construction and operation of the proposed Project would not result in the generation of criteria air pollutants that would exceed SCAQMD thresholds of significance. Additionally, the Project would be required to implement all applicable TOP 2050 Mitigation Measures, which further reduce construction and operational

emissions. Lastly, the report suggested one additional condition of approval that would serve to further reduce the Project's impacts, which has been included in the Project conditions of approval: "During construction of the proposed project, the Project contractor shall ensure all off-road diesel-powered construction equipment of 50 horsepower or more used for construction at a minimum meets the California Air Resources Board Tier 2 emissions standards equipped with Level 3 diesel particulate filters or the equivalent."

b) General Biological Assessment — The biological assessment analyzed data base and literature resources regarding the Project site and its five-mile radius and conducted a field survey of the Project site. While a total of 54 sensitive species of plants and 66 sensitive species of animals have the potential to occur on or within the vicinity of the Project area, none of the listed species were found on the Project site, and the site was not found to be a suitable or viable habitat. The assessment determined the following:

- The Project site does not contain any drainage, riparian, or riverine features and there are no California Department of Fish and Wildlife ("CDFW"), United States Army Corps of Engineers, or Regional Water Quality Control Board jurisdictional waters within the Project site boundaries.
- No sensitive species have the potential to occur on the Project site; no impacts to sensitive species are expected.
- Potential impacts to nesting birds may occur if ground-disturbing activities or vegetation removal occur during the bird nesting season of February 1 through September 15. Implementation of the report recommendations will ensure that potential impacts to nesting birds are less than significant; as such, the project has been conditioned to limit or eliminate vegetation removal during the nesting season; if unavoidable, nesting bird surveys shall be provided.
- The Project site is not located within or adjacent to designated federal critical habitat; no impact to critical habitat would occur.
- No wildlife movement corridors were found to be present on the Project site; no impacts are expected.
- Any removal of trees shall be required to comply with the "Parkway Tree Regulations" of the City of Ontario Municipal Code. As such, the Project will not conflict with local policies or ordinances protecting biological resources.
- The Project would not be anticipated to conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.
- The Project site does not contain any state or federal drainages, therefore no impacts to any jurisdictional drainages are expected.

c) Cultural Resources Assessment – The cultural resources assessment analyzed the Prehistoric and Historic Periods of the Project site and performed an archaeological records search. None of the databases/indexes searched identified any potential resources within the Project site; however, historic aerial photographs revealed an assortment of buildings and structures were built and removed between 1946 and

present. Further, it was found that the property was originally associated with the Bestile Manufacturing Co., a company that specialized in various products for the manufacture and maintenance of plastic coated panels with two trademarked, nationally-recognized brands described as "a pioneer in developing the plastic panels or wall tiles" (San Bernardino Sun 1949). A field survey was also conducted in conjunction with the assessment, during which no archaeological resources were identified. Further, the field survey identified multiple historic period structures which appeared to originally be associated with the Bestile Manufacturing Company and, collectively, the structures compromise one historic-era resource associated with this business operation. The assessment did not conclude whether or not the structures individually or collectively represent significant historic structures or resources eligible for the California Register of Historical Resources (CRHR) and recommended a historical assessment report be conducted for the property. This historical assessment report was undertaken by the Applicant and is explained below.

d) Historical Resources Assessment — The historical resources assessment documented and evaluated the property on Department of Parks and Recreation (DPR) 523 series forms, and ultimately concluded that the property is not eligible for inclusion on the Local Register and the CRHR, as the property does not meet the definition of an historical resource under the CRHR or pursuant to CEQA Guidelines Section 15064.5. The property does not qualify for designation under Local Register and CRHR criteria, as the buildings and/or site:

- Do not exemplify or represent a special element of Ontario or California's history under CRHR / Local Register Criterion A.
- Are not identified with persons or events significant in local, state, or national history under CRHR / Local Register Criterion B.
- Do not embody the distinctive characteristics of a type, period, or method of construction, nor do they represent the work of an important creative individual under CRHR / Local Register Criterion 3 / C, D, E, F.
- Do not have a unique location nor represent an established and familiar visual feature of a neighborhood, community, or the City, nor are they one of the few remaining examples in the City, region, state, or nation possessing distinguishing characteristics of an architectural or historical type or specimen under Local Register Criteria G and H.

Further research and analysis of the subject property is unlikely to yield information important in prehistory or history under CRHR Criterion 4. Additionally, while the property retains the integrity of location, the property no longer retains integrity of feeling and setting, and, over the years as the Bestile Manufacturing Company flourished, new additions and modifications were made to the property. While the additions reflect the historical evolution of the property, the buildings have been heavily altered and no longer retain sufficient integrity of materials, design, workmanship, or association.

e) Geotechnical Investigation — The geotechnical investigation conducted database research, field work and lab sampling for the project site, to determine whether

construction was feasible on the Project site from a geotechnical standpoint. While geotechnical conditions exist that should be addressed prior to construction, including mitigations found in the California Building Code, remedial grading work, stormwater infiltration installation, and other recommendations based on empirical and analytical methods typical of the standard-of-practice in southern California, the Project site was found to be feasible for the proposed Project's scope of work.

f) Paleontological Resources Assessment — The paleontological resource assessment was completed to evaluate the Project site's potential to yield paleontological resources and included a review of paleontological literature and fossil locality records for previous projects in the area, a review of the underlying geology, and recommendations to mitigate potential impacts to paleontological resources. The assessment found that there were no known fossil localities within the Project boundaries or near the Project; however, other discoveries had been made in locals five miles or greater from the Project site. A field visit was also conducted, and concluded that no paleontological resources, or evidence of paleontological resources, were observed during the survey.

TOP EIR indicates the City is underlain by deposits of Quaternary and Upper-Pleistocene sediments deposited during the Pliocene and early Pleistocene time, Quaternary Older Alluvial sediments may contain significant, nonrenewable, paleontological resources and are, therefore, considered to have high sensitivity at depths of 10 feet or more below ground surface. In addition, TOP EIR (Section 5.5) indicates that only one paleontological resource has been discovered in the City. The project site has surficial sediments composed of younger Quaternary Alluvium, derived as alluvial fan deposits from the San Gabriel Mountains to the north or as dune sands. These deposits typically do not contain significant vertebrate fossils, at least in the uppermost layers, but they may be underlain by older sedimentary materials at estimated depths greater than 10 feet which could contain paleontological resources.

Project grading may exceed 10 feet in depth in some areas so the project will implement TOP EIR Mitigation Measure 5-2, as outlined in Section 5, Cultural Resources, as this measure addresses paleontological resources. The measure requires that, in the event unanticipated paleontological resources are identified during excavation, construction activities will not continue or will be moved to other parts of the project site and a qualified paleontologist shall be contacted to determine the significance of these resources. If the find is determined to be significant, avoidance or other appropriate resource protection actions will be taken.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

g) Phase I Environmental Site Assessment ("ESA") — The ESA was completed in accordance with the American Society for Testing and Materials (ASTM) standards for the purposes of meeting certain landowner liability protections and identifying the

potential presence of hazards on or near the Project site, including recognized environmental conditions ("RECs"), controlled recognized environmental conditions ("CRECs"), or historical recognized environmental conditions ("HRECs"). Identification of RECs, CRECs, and HRECs is important, as it aids in preventing exposure and guiding proper handling of, any hazardous substances or petroleum products in, on or near a property. The study identified a few RECs, including: the fact that the historical use of the site is an industrial facility and as such likely has used hazardous materials at a time when such materials were not regulated; the unknown status of two solvent and one fuel oil underground storage tanks ("USTs"); and the off-site Alger Manufacturing Co. located at 724 South Bon View Avenue is also considered a REC based on the identified tetrachloroethylene ("PCE") and trichloroethylene ("TCE") plume in both soil vapor and groundwater. The study did not find any evidence of CRECs or HRECs in connection with the Project site but suggested further screening to rule out RECs on-site.

h) Limited Subsurface Soil Vapor Screening — The limited subsurface soil vapor screening was completed to determine whether volatile organic compounds ("VOCs") were present in the subsurface of the Project site at concentrations of potential concern, as identified during preparation of the above-listed ESA. A field visit and lab tests were performed, and it was concluded that VOCs were not detected, that historical site and surrounding area activities have not resulted in the release of contaminants to the subsurface above screening concentrations of concern, and that no additional assessment or mitigation is necessary at this time. The assessment recommended that any future site development or earthwork activities in the vicinity of the former tank system location on the 621 South Bon View property be performed under supervision of an environmental professional, which has been made a project condition of approval.

i) Preliminary Water Quality Management Plan ("PWQMP") — A PWQMP is a tool to improve the integration of required water quality elements, stormwater management, water conservation, rainwater harvesting and re-use, and flood management. PWQMPs are reviewed and conditioned on by the Environmental Engineering Division and the Engineering Department, and a Final WQMP shall be reviewed and approved by said staff prior to the issuance of construction permits. The project shall implement a variety of strategies to reduce any potential stormwater and water quality impacts.

j) Preliminary Hydrology Study — The preliminary hydrology study was prepared as one of the components of the submittal application for a Tentative Parcel Map and examines drainage characteristic and patterns of the on-site watershed in regard to distribution and management of storm water run-off. The study concluded that, through the construction of the proposed drainage system and a quality maintenance program, flood protection is provided for 100-year storm events. Further review is complete, and requirements are made by the Environmental Engineering Division and the Engineering Department prior to issuance of construction permits.

k) Noise and Vibration Analysis — A noise and vibration analysis was prepared to evaluate potential noise and vibration impacts, and any applicable reduction

measures, associated with the proposed Project and in conjunction with TOP 2050 SEIR and the City's Municipal Code and Development Code requirements. The analysis included short-term construction-related noise impacts; short-term construction-related vibration levels; long-term, off-site traffic-related noise impacts; long-term traffic-related vibration impacts; and long-term, off-site stationary noise impacts.

The analysis found that short-term construction-related noise impacts would remain below the 80 dBA and 90 dBA 1-hour construction noise level criteria as established by the Federal Transit Administration ("FTA") for residential uses and industrial uses, respectively, for the average daily condition modeled. Therefore, noise impacts would be both less than significant and less than that identified in TOP 2050 SEIR with implementation of the mitigation measures listed in TOP 2050 SEIR, which are included as a project condition of approval.

With regards to short-term construction-related vibration levels, it is expected that dump trucks and equipment that may potentially operate as close as five feet from the property line would generate ground-borne vibration levels of up to 0.352 PPV (in/sec) at the closest structure to the Project site, which would exceed the 0.2 PPV (in/sec) threshold considered safe for non-engineered timber and masonry buildings and result in a potentially significant impact. Therefore, the use of heavy equipment should be prohibited within 15 feet of existing structures to ensure the vibration levels are below the 0.2 PPV (in/sec) threshold; and, for any heavy equipment absolutely necessary within 15 feet of the east boundary of the project site, apply TOP 2050 SEIR Mitigation Measure 12-2 to reduce potential impacts, which has been made a project condition of approval.

The study also analyzed long-term, off-site traffic noise impacts and found that the increase in Project-related traffic noise would be no greater than 0.6 dBA. As the potential noise level increase is below the readily-perceptible threshold of 5.0 dBA, traffic noise impacts from project-related traffic on off-site sensitive receptors would be less than significant and consistent with TOP 2050 SEIR, and as such, no mitigation measures are required.

Additionally, the study analyzed and concluded that the proposed Project would not generate vibration levels related to on-site operations, and that vibration levels generated from Project-related traffic on the adjacent roadways would also be less than significant. No mitigation measures are required.

Lastly, the study analyzed long-term, off-site stationary noise impacts. Adjacent off-site land uses would be potentially exposed to stationary-source noise impacts from the proposed on-site heating, ventilation, and air conditioning (HVAC) equipment, and truck deliveries, loading, and unloading activities. A conservative model was used and found that the combined hourly noise levels generated by HVAC equipment and truck delivery activities at the closest off-site land uses would range between 51.0 dBA Leq to 61.6 dBA Leq at the surrounding receptors. These levels would be below the City's noise standard of 65 dBA Leq at the residential land uses and below the noise standard of 70 dBA Leq for industrial land uses. Project noise levels would not exceed the maximum permissible

noise levels as established by the City of Ontario and the impact would be less than significant and consistent with TOP 2050 SEIR. No noise reduction measures are required.

l) Vehicle Miles Traveled Analysis — Vehicle Miles Traveled (VMT) analyses are reviewed, approved, and conditioned by the Traffic Division and Engineering Department. As presented, the analysis concludes that the proposed Project's VMT analysis, using TOP 2050's model, was found to exceed the City's VMT per service population (SP) threshold by 14.56 percent for the baseline (2022) condition, but was below the City's threshold by 19.48 percent for buildout (2050) conditions. However, with the inclusion of project design features, the Project would reduce its VMT per SP to below the City's threshold in both the baseline and the buildout conditions. Additionally, the Project's cumulative effect on VMT was also found to not change the City's VMT per SP. Therefore, based on the findings of the VMT analysis and with implementation of TOP 2050 SEIR's mitigation measures and additional requirements as listed in the Project conditions of approval, the Project is not expected to have any significant impacts to VMT within the Project area nor cumulatively within the City at either the baseline (2022) or buildout (2050) conditions.

PART 2: RECITALS

WHEREAS, The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) was certified on August 16, 2022, (hereinafter referred to as "Certified SEIR"), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario has prepared and approved for attachment to the Certified SEIR, an Addendum to the Certified SEIR (hereinafter referred to as "SEIR Addendum") in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the SEIR Addendum concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified SEIR, and that the Certified SEIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, pursuant to State CEQA Guidelines Section 15164(a), a lead agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary to a project, but the preparation of a subsequent or supplemental EIR is not required; and

WHEREAS, the City determined that none of the conditions requiring preparation of a subsequent or supplemental EIR would occur from the Project, and that preparation of an Addendum to the Certified EIR was appropriate; and

WHEREAS, the City of Ontario is the lead agency on the Project, and the Development Advisory Board (hereinafter referred to as "DAB") is the recommending authority for the requested approval to construct and otherwise undertake the Project; and

WHEREAS, the DAB has reviewed and considered the SEIR Addendum and related documents for the Project, and intends to take actions on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the SEIR Addendum and related documents are on file in the City of Ontario Planning Department, located at 303 East B Street, Ontario, CA 91764, and are available for inspection by any interested person at that location and are, by this reference, incorporated into this Resolution as if fully set forth herein; and

WHEREAS, City of Ontario Development Code Table 2.02-1 (Review Matrix) grants the DAB the responsibility and authority to review and act, or make recommendation to the Planning Commission on the subject Application; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which the public notification of environmental actions shall be provided and hearing procedures to be followed, and all such notifications and procedures have been accomplished pursuant to Development Code requirements; and

WHEREAS, on March 6, 2023, the DAB of the City of Ontario conducted a hearing on the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the hearing and adoption of this Decision have occurred.

PART 3: THE DECISION

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED AND DECIDED by the Development Advisory Board of the City of Ontario as follows:

SECTION 1: Environmental Determination and Findings. As the recommending body for the Project, the DAB has reviewed and considered the information contained in the Addendum, the initial study, and the administrative record for the Project, including all written and oral evidence provided during the comment period. Based upon the facts and information contained in the Addendum, the initial study, and the administrative record, including all written and oral evidence presented to the DAB, the DAB finds as follows:

(1) The environmental impacts of the Project were reviewed in conjunction with an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report

(State Clearinghouse No. 2021070364), certified by the Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002; and

(2) The SEIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The SEIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Planning Commission; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the Project may result in significant environmental impacts.

SECTION 2: Subsequent or Supplemental Environmental Review Not Required. Based on the SEIR Addendum, all related information presented to the DAB, and the specific findings set forth in Section 1, above, the DAB finds that the preparation of a subsequent or supplemental Certified SEIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified SEIR that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified SEIR was prepared, that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified SEIR was certified/adopted, that shows any of the following:

(a) The Project will have one or more significant effects not discussed in the Certified SEIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified SEIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: Housing Element Compliance. Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the recommending body for the Project, the DAB finds that based on the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the Project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the Project site is not one of the properties in the Housing Element Sites contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report.

SECTION 4: Airport Land Use Compatibility Plan ("ALUCP") Compliance. The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the ONT ALUCP, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the recommending body for the Project, the DAB has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the DAB, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP.

SECTION 5: Development Advisory Board Action. The DAB does hereby find that based upon the entire record of proceedings before it, and all information received, that there is no substantial evidence that the Project will constitute substantial changes to the Certified SEIR, and does hereby recommend the Planning Commission APPROVE the

adoption of the SEIR Addendum to the Certified SEIR, included as Attachment 1 of this Decision.

SECTION 6: Indemnification. The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 7: Custodian of Records. The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario. The records are available for inspection by any interested person, upon request.

- - - - - - - - - - - - -

APPROVED AND ADOPTED this 6th day of March 2023.

Development Advisory Board

1 INTRODUCTION

1.1 PURPOSE AND SCOPE

This document is an Addendum to The Ontario Plan (TOP) 2050 Final Supplemental Environmental Impact Report (SEIR) (State Clearinghouse No. 2021070364) (TOP 2050 SEIR) certified by the City of Ontario (City) in August 2022. TOP 2050 SEIR, in conjunction with this Addendum, serve as the environmental review for the proposed 627 Bon View Avenue Warehouse Project (Project, proposed Project). The Project proposes development of a 10.05 gross-acre site, including the demolition of six existing structures totaling approximately 77,696 square feet (SF), and construction of two warehouse buildings totaling 237,236 SF with associated parking, landscape, and site improvements, which is subject to City approval of a Conditional Use Permit (CUP).

TOP 2050 SEIR analyzed the environmental impacts associated with the implementation of the update to the original TOP, adopted in 2010. TOP 2050 SEIR relied on the findings of the 2009 Draft EIR, 2010 Recirculated Draft EIR, and 2010 Final EIR (State Clearinghouse No. 2008101140). In April 2009, the City of Ontario circulated the 2009 Draft EIR for public review. Six environmental categories (Agricultural Resources, Air Quality, Cultural Resources, Global Climate Change, Noise, and Traffic and Transportation) had significant and unavoidable impacts that could not be alleviated by mitigation. A Recirculated Draft EIR for The Ontario Plan was released in November 2009 to update and provide additional analysis concerning GHG emissions impacts associated with buildout of the Policy Plan. Only two topics were analyzed in the 2009 Recirculated Draft EIR: Global Climate Change and Additional Project Alternative: 15 percent GHG Reduction Alternative. Remaining topics previously analyzed in the 2009 Draft EIR were determined to be adequately addressed. Analysis in the 2009 Recirculated Draft EIR found that significant and unavoidable impacts identified in the 2009 Draft EIR would remain significant and unavoidable for the Approved Project. These determinations were reiterated in the 2010 Final EIR, certified on January 27, 2010.

TOP 2050 SEIR analyzed the Project site as having a land use designation of Industrial (IND) and a zoning designation of General Industrial (IG). The IND land use designation provides for a variety of light industrial uses, including warehouse/distribution, assembly, light manufacturing, research and development, storage, repair facilities, and supporting research and professional office uses developed at a maximum floor area ratio (FAR) of 0.55. The IG zoning designation allows for development of general industrial uses at a FAR of 0.55. TOP 2050 SEIR analyzed the development of approximately 240,778 SF of general industrial uses on the Project site.

Although the site was developed with six structures between 1947 and 2000 totaling approximately 77,696 SF, redevelopment within the Project site is still subject to TOP 2050 SEIR and mitigation measures identified in TOP 2050 SEIR, as well as the development regulations in the City's municipal code. The TOP 2050 EIR assumes a FAR of 0.55 and the buildout of the site with approximately 240,778 SF of general industrial uses. Pursuant to Public Resources Code Section 21167.2, TOP 2050 SEIR must be conclusively presumed to be valid with regard to its use for later activities unless any of the circumstances requiring supplemental review exist.[1]

This environmental checklist provides the basis for an Addendum to the previously certified Final EIR and serves as the appropriate level of environmental review of the proposed Project, as required pursuant to the provisions of the California Environmental Quality Act (CEQA) (Public Resources Code Section 21000 et seq.) and the State CEQA Guidelines. This checklist confirms that the Project is within the scope of the project analyzed in TOP 2050 SEIR, as provided in State CEQA Guidelines Section 15168, and the Addendum augments the analysis in TOP 2050 SEIR as provided in State CEQA Guidelines Section 15162 and 15164

[1] *See Pub. Resources Code, § 21167.2; Laurel Heights Improvement Ass'n v. Regents of the University of California (1993) 6 Cal.4th 1112, 1130 ("[a]fter certification, the interests of finality are favored"); Santa Teresa Citizen Action Group v. City of San Jose (2003) 114 Cal. App. 4th 689, 705-706.)*

and provides the basis for the City's determination that no supplemental or subsequent EIR is required to evaluate the proposed Project. Environmental analysis and mitigation measures from TOP 2050 SEIR have been incorporated into this Addendum, and applicability of each has been described. In cases where mitigation measures from TOP 2050 SEIR have been revised or satisfied by studies prepared for the Addendum, it is noted.

Pursuant to the provisions of CEQA and the State CEQA Guidelines, the City, as the Lead Agency, is charged with the responsibility of deciding whether to approve the proposed Project. As part of the decision-making process, the City is required to review and consider the potential environmental effects that could result from construction and operation of the proposed Project. The analysis in this document discusses the impacts identified within TOP 2050 SEIR for buildout of the site with 240,778 SF of general industrial uses zoning designation ("previously analyzed Project, TOP 2050 SEIR project") and compares them with the impacts that would result from implementation of the proposed Project's two warehouse buildings totaling 237,236 SF.

Existing Regulatory Requirements (RRs) and Project Design Features (PDFs)
Throughout the analysis of this document, reference is made to requirements that are applied to all development on the basis of federal, state, or local law. Existing Regulatory Requirements are collectively identified in this document as RRs. Where applicable, RR are listed to show their effect in reducing potential environmental impacts. The Project incorporates various measures that serve to reduce potentially significant impacts. These measures are referred to as Project Design Features (PDFs), which are required to be incorporated into the Project. Additionally, applicable Mitigation Measures from TOP 2050 SEIR are included herein and will be incorporated into the Project. As shown throughout the analysis, the Project does not result in any new impacts and no additional mitigation measures are required. All references to mitigation measures relate only to those from TOP 2050 SEIR.

1.2 ENVIRONMENTAL PROCEDURES

Pursuant to CEQA and the State CEQA Guidelines, the City's review of the Checklist and Addendum will determine if approval of the requested discretionary actions and subsequent development could cause a change in the conclusions of the certified EIR and disclose any change in circumstances or new information of substantial importance that would substantially change the conclusions of TOP 2050 SEIR. This environmental Checklist and Addendum provide the City with information to document potential impacts of the proposed Project.

Pursuant to Section 21166 of the Public Resources Code and Section 15162 of the State CEQA Guidelines, when an EIR has been certified or a negative declaration adopted for a project, no subsequent EIR shall be prepared for the project unless the lead agency determines, on the basis of substantial evidence, that one or more of the following conditions are met:

Substantial changes are proposed in the project which will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;

Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete, shows any of the following:

- The project will have one or more significant effects not discussed in the previous EIR or negative declaration.

- Significant effects previously examined will be substantially more severe than identified in the previous EIR.
- Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives.
- Mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives.

Section 15164 of the State CEQA Guidelines states that an Addendum to an EIR shall be prepared "if some changes or additions are necessary, but none of the conditions described in Section 15162 calling for preparation of a subsequent EIR have occurred." Section 15168 of the State CEQA Guidelines states that where the later activities involve site specific operations, the agency should use a written Checklist to document the evaluation of the site and the activity to determine whether the environmental effects of the operation were within the scope of the program EIR. Under Section 15168, where if the agency finds that pursuant to Section 15162, no subsequent EIR would be required, the agency can approve the activity as being within the scope of the project covered by the program EIR, and no new environmental document is required.

In reviewing this Addendum, the question before City decision-makers is not whether TOP 2050 SEIR complies with CEQA, but only whether one of the events triggering the need for subsequent environmental review has occurred. (*A Local & Regional Monitor v. City of Los Angeles* (1993) 12 Cal.App.4th 1773; *Committee for Green Foothills v. Santa Clara County Board of Supervisors* (2010) 48 Cal.4th 32.)

This Addendum and the technical studies in support of the analysis evaluates the proposed Project and any significant changes to the existing conditions that have occurred since TOP 2050 SEIR was certified. It also evaluates any new information of substantial importance that was not known and could not have been known with exercise of reasonable diligence at the time that TOP 2050 SEIR was certified. It further examines whether, as a result of any changes or any new information, a subsequent EIR may be required. This examination includes an analysis of the provisions of Section 21166 of the Public Resources Code and Section 15162 of the State CEQA Guidelines and their applicability to the proposed Project. This Addendum relies on use of the environmental analysis provided herein, which addresses environmental issues on a section-by-section basis and provides a comparison to the findings in TOP 2050 SEIR.

On the basis of the findings of the certified TOP 2050 SEIR and the provisions of the State CEQA Guidelines, the City as the Lead Agency determined that, as documented in this Addendum to the previously certified Final EIR, no supplemental or subsequent EIR is required to review the proposed Project.

1.3 PREVIOUS ENVIRONMENTAL DOCUMENTATION

As mandated by CEQA, this Addendum relies on the environmental analysis in TOP 2050 SEIR. A summary of the previous environmental documentation and how it relates to the proposed 627 Bon View Avenue Warehouse Project (proposed Project) is provided below.

TOP 2050 was approved by the City of Ontario in 2022 and serves as an update to TOP 2010 to guide the City's development and conservation for the next 30 years through 2050. TOP 2050 SEIR evaluated the buildout of the Project site pursuant to proposed City of Ontario land use and zoning designations. The proposed Project site has a TOP 2050 land use designation of Industrial (IND) and a zoning designation of General Industrial (IG). The IG zoning designation allows for development of a wide range of manufacturing and assembly activities, storage and warehousing activities, and other similar uses developed at a maximum intensity FAR of 0.55. TOP 2050 SEIR assumed development of a maximum intensity FAR of 0.55 and approximately 240,778 SF of general industrial uses on the 10.05-acre Project site. TOP 2050 SEIR

identified that TOP 2050 would have significant and unavoidable environmental effects related to air quality, cultural resources, noise, and transportation.

TOP 2050 SEIR also identified seven environmental impact areas for which mitigation measures were required to reduce potential environmental impacts to a less than significant level: air quality, cultural resources, paleontological resources, greenhouse gas emissions, noise, transportation, and tribal cultural resources.

This Addendum incorporates by reference TOP 2050 SEIR and the technical documents that relate to the Project or provide additional information concerning the environmental setting of the Project. The information within this Addendum is based on the following technical studies and/or planning documents:

- The Ontario Plan 2050 Final Supplemental Environmental Impact Report State Clearinghouse No. 2021070364
- City of Ontario Development Code (https://www.ontarioca.gov/Planning/Applications)
- City of Ontario Municipal Code (https://codelibrary.amlegal.com/codes/ontarioca/latest/ontario_ca/0-0-0-35678)
- The Ontario Plan (https://www.ontarioca.gov/OntarioPlan)
- Technical studies, personal communications, and web sites listed in Section 6, *References*
- In addition to the websites listed above, all documents are available for review at the City of Ontario Planning Department, located at 303 East B Street, Ontario, CA 91764.

2 ENVIRONMENTAL SETTING

2.1 PROJECT LOCATION

The Project site is located within the western portion of the City of Ontario at 627 Bon View Avenue, Ontario, California 91761. Regional access to the Project site is provided by Interstate 10 (I-10), State Route 83 (SR-83), and State Route 60 (SR-60). Local access to the site is provided by Ontario Boulevard, Bon View Avenue, and California Street. The Project site and surrounding area are shown in Figure 2-1, *Regional Location* and Figure 2-2, *Local Vicinity*.

2.2 EXISTING PROJECT SITE

The Project site consists of a single parcel encompassing approximately 10.05-acres. The parcel is identified as Assessor's Parcel Number 1049-181-14. The site is currently developed with an RV and Boat Storage facility. The facility contains 6 structures totaling approximately 77,696 SF. Access to the site is currently provided via two gated driveways on Ontario Boulevard, four gated driveways on Bon View Avenue, and two gated entrances on California Street. The Project site's existing conditions are shown in Figure 2-3, *Aerial,* and Figure 2-4, *Site Photos*.

2.3 EXISTING LAND USES AND ZONING DESIGNATION OF THE PROJECT SITE

The Project site has a General Plan Land Use designation of Industrial and is zoned General Industrial (IG). The Industrial land use designation accommodates a variety of light industrial uses, including warehousing/distribution, assembly, light manufacturing, research and development, storage, repair facilities, and supporting retail and professional office uses developed at a maximum FAR of 0.55. The IG zone is intended to allow for a wide range of manufacturing and assembly activities, storage and warehousing activities, and other similar uses developed at a maximum FAR of 0.55.

2.4 SURROUNDING GENERAL PLAN AND ZONING DESIGNATIONS

The Project site is located within a fully developed and urbanized area. Land uses surrounding the Project site are described in Table 2-1.

Table 2-1: Surrounding Existing Land Use and Zoning Designations

	Existing Land Use	City General Plan Designation	City Zoning Designation
North	Ontario Boulevard followed by the Union Pacific Railroad and vacant and undeveloped land and the Ontario Access Center.	Industrial	General Industrial (IG)
West	Bon View Avenue followed by commercial and industrial uses.	Industrial	General Industrial (IG)
South	Industrial building and recycling center followed by California Street followed by a food bank, a residence, vacant and undeveloped parcels and a trailer storage yard.	Business Park	Light Industrial (IL)
East	Truck repair shop, feed manufacturer, and steel distributor.	Industrial	General Industrial (IG)

3 PROJECT DESCRIPTION

3.1 PROJECT OVERVIEW

The applicant for the proposed Project is requesting approval from the City of Ontario to demolish six existing structures totaling 77,696 SF on the site, to subdivide the existing parcel into two parcels, and to construct two warehouse buildings totaling 237,236 SF. The Project would include parking, associated infrastructure improvements, and landscaping corresponding with each building. Figure 3-1, *Conceptual Site Plan,* illustrates the proposed site plan. This document discusses the impacts identified within TOP 2050 SEIR for buildout of the site with 240,778 SF of general industrial uses ("previously analyzed Project, TOP 2050 SEIR project") and compares them with the impacts that would result from implementation of the proposed Project's two warehouse buildings totaling 237,236 SF.

3.2 PROJECT FEATURES

Tentative Parcel Map

The Project proposes the subdivision of the 10.5-acre parcel identified as Assessor's Parcel Number 1049-181-14. Resulting Parcel 1 would be 8.12-acres and resulting Parcel 2 would be 1.92-acres.

Building Summary and Architecture

The Project proposes construction of two industrial warehouse buildings totaling 237,236 SF. Building 1 would be constructed on Parcel 1 and would be approximately 191,145 SF, resulting in a FAR of 0.54. Building 2 would be constructed on Parcel 2 and would be approximately 46,091 SF, resulting in a FAR of 0.55. A breakdown of each building is outlined below:

Table 2: Building Breakdown

	Building 1	**Building 2**
Warehouse	183,145 SF	43,091 SF
Office	8,000 SF[1]	3,000 SF
Total	**191,145 SF**	**46,091 SF**

[1]Inclusive of 4,000 SF mezzanine office space.

Building 1 would be single-story and approximately 45 feet tall at the parapet and include loading docks and associated vehicle and truck trailer parking spaces. The building would provide approximately 183,145 SF of warehouse space, approximately 8,000 SF of office space, with 4,000 SF of that as ground floor office and 4,000 SF as mezzanine. Building 1 would be set back a minimum of 10 feet from the northern property line, 64 feet from the eastern property line, 10 feet from the western property line, and a minimum of 9 feet from the southern property line.

Building 2 would be single-story and approximately 42 feet tall at the parapet and include loading docks and associated vehicle and truck trailer parking spaces. The building would provide approximately 43,091 SF of warehouse space and approximately 3,000 SF of office space. Building 2 would be set back 6 feet from the northern property line, a minimum of 84 feet from the eastern property line, 10 feet from the southern property line, and 5.9 feet from the western property line.

As shown in Figures 3-2a-b, *Elevations*, both buildings would establish an architectural presence through an emphasis on building finish materials and consistent material usage and color scheme. The buildings would be white and shades of grey with highlights of indigo blue. The use of landscaping, building layout, finish materials, and accenting on the Project site would create a quality architectural presence along the Ontario Boulevard, Bon View Avenue, and California Street frontages.

Parking and Loading Dock Summary

Building 1 would include 25 dock doors located along the southern side of the building. Building 1 would also include 23 trailer parking spaces located along the southern property line. Building 1 would also include 106 passenger vehicle parking spaces (101 standard spaces and 5 accessible spaces) located to the north, east, and south of the building.

Building 2 would include five dock doors and two trailer stalls located along the eastern side of the building. Building 2 would also include 37 passenger vehicle parking spaces (35 standard spaces and two accessible spaces) located to the east of the building.

Landscaping and Fencing

Building 1 would include an 8-foot-high tubular steel fence along the southern property line to screen the truck yard. Building 2 would include an 8-foot-high tubular steel fence along the northern and eastern property lines to screen the truck yard. Building 1 would also include a 12-foot-high wall along the truck court near Bon View Avenue and Building 2 would contain a 12-foot-high wall along the truck court to screen activities from California Street. Both Buildings 1 and 2 would also include rolling gates to control access to the truck loading and trailer parking areas.

Building 1 would include approximately 53,500 SF of landscaping around the perimeter of the site and in-between parking areas. Building 2 would include approximately 8,600 SF of landscaping around the perimeter of the site. Landscaping would include 24-inch, 36-inch, and 48-inch box trees, 5-gallon shrubs, accents, and groundcover to screen the proposed building, parking, and loading areas from off-site viewpoints as shown in Figure 3-3, *Landscape Plan*.

Access and Circulation

Building 1 would be accessible via four driveways: two on Bon View Avenue and two on Ontario Boulevard. The southernmost driveway on Bon View Avenue would be 40-feet-wide and the northernmost driveway would be 26-feet-wide. The westernmost driveway on Ontario Boulevard would be 26-feet-wide and the easternmost driveway would be 30-feet-wide. Internal circulation would be provided via a 30-foot-wide drive aisle, as shown in Figure 3-1, *Conceptual Site Plan*.

Building 2 would be accessible via one 33-foot-wide driveway on California Street. Internal circulation would be provided via a 33-foot-wide drive aisle.

Infrastructure Improvements

Water and Sewer

The Project would extend the proposed 12-inch water line in Ontario Boulevard west to connect to the existing 8-inch water line in Bon View Avenue. Building 1 would install new onsite water that would connect to the extended 8-inch water line in Ontario Boulevard.

Building 2 would install new onsite water lines that connect to the existing 8-inch water line California Street.

Drainage Improvements

Storm flows from Building 1 would be collected and conveyed via storm drainpipe into a proposed underground storage chamber. Chamber outflow will be directed to Bon View Avenue via a parkway drain. Bon View Avenue drains to California Street.

Storm flows from Building 2 would be collected and conveyed via storm drainpipe into a proposed underground storage chamber. Chamber outflows are directed to California street to mimic the existing condition.

3.3 OPERATIONAL CHARACTERISTICS

The Project would be operated as two individual warehouses. The Project does not include cold storage. Typical operational characteristics include employees and customers traveling to and from the site, delivery of materials and supplies to the site and truck loading and unloading. The Project is anticipated to operate 7 days a week 24 hours a day.

3.4 CONSTRUCTION AND PHASING

Construction activities for the Project would occur over one phase and in the following stages: (1) demolition and removal of existing structures, foundations, asphalt/pavement, utilities, and other subsurface improvements; (2) grading and excavation; (3) site preparation, which includes clearing any remaining infrastructure, utilities, and trenching for the new utilities and services; (4) building construction; and (5) landscape installation, paving, and application of architectural coatings. Demolition is expected to begin in third Quarter 2023 and construction would take place over 15 months, ending in fourth Quarter 2024. Construction activities would be limited to the hours of 7:00 a.m. to 6:00 p.m. on weekdays and 9:00 a.m. to 6:00 p.m. on weekends pursuant to the City's Municipal Code Section 5-29.09.

The Project would require 10,000 cubic yards of cut and 10,000 cubic yards of fill for the construction of the two buildings. Remedial grading would be performed within the proposed building pad areas to remove undocumented fill soils, which extend to depths of 4 to 5 feet below finished pad grade, and at least 2 feet below the deepest footing bottom elevation.

3.5 DISCRETIONARY APPROVALS, PERMITS, AND STUDIES

The following discretionary approval, permits, and studies are anticipated to be necessary for implementation of the proposed Project:

City of Ontario

- Development Plan Review
- Parcel Map
- Adoption of this CEQA Addendum with the determination that the Addendum has been prepared in compliance with the requirements of CEQA.
- Approvals and permits necessary to execute the proposed Project, including but not limited to, demolition permit, grading permit, building permit, etc.

	Quercus agrifolia - Standard / Coast Live Oak	48"box	Low	9
	Quercus virginiana / Southern Live Oak	36"box	Low	9
	Tristania conferta / Brisbane Box	24"box	Med	53

CONCEPT PLANT SCHEDULE

FOUNDATION PLANTING / HEDGE SCREEN - MED WATER - 5 GAL
Buxus microphylla japonica 'Green Beauty' / Green Beauty Boxwood
Juniperus chinensis 'Spartan' / Spartan Juniper
Ligustrum texanum / Texas Privet
Nandina domestica / Heavenly Bamboo
Podocarpus gracilior 'Column' / Fern Pine
Rhaphiolepis indica 'Jack Evans' / Indian Hawthorn
Xylosma congestum / Shiny Xylosma

GRASSES - LOW WATER - 5 GAL
Muhlenbergia capillaris / Pink Muhly
Muhlenbergia lindheimeri 'Autumn Glow' TM / Lindheimer's Muhly

LARGE SCALE PERIMETER SHRUBS - LOW WATER - 5 GAL
Arbutus unedo / Strawberry Tree Shrub
Callistemon citrinus / Lemon Bottlebrush Shrub
Dodonaea viscosa 'Purpurea' / Purple Leafed Hopseed Bush
Elaegnus pungens / Silverberry
Heteromeles arbutifolia / Toyon

SMALL SCALE FOUNDATION PLANTING - LOW WATER - 5 GAL
Elaegnus pungens / Silverberry
Leucophyllum frutescens 'Green Cloud' TM / Green Cloud Texas Ranger
Westringia fruticosa / Coast Rosemary

ACCENT SHRUBS - LOW WATER USE - 5 GAL
Agave desmettiana 'Variegata' / Variegated Agave
Agave x 'Blue Flame' / Blue Flame Agave
Callistemon citrinus 'Little John' / Dwarf Bottle Brush
Muhlenbergia capillaris / Pink Muhly
Muhlenbergia lindheimeri 'Autumn Glow' TM / Lindheimer's Muhly
Rosmarinus officinalis 'Tuscan Blue' / Tuscan Blue Rosemary
Salvia clevelandii 'Allen Chickering' / Cleveland Sage
Salvia greggii 'Furmans Red' / Furman's Red Salvia
Westringia fruticosa / Coast Rosemary

ACCENT SHRUBS - MEDIUM WATER USE - 5 GAL
Pittosporum tenuifolium 'Marjorie Channon' / Tawhiwhi
Rhaphiolepis indica 'Jack Evans' / Indian Hawthorn
Rosa floribunda 'Iceberg' / Iceberg Rose

GROUND COVER PALETTE - LOW WATER USE - 1 GAL
Acacia redolens 'Desert Carpet' TM / Bank Catclaw
Baccharis pilularis 'Pigeon Point' / Coyote Brush
Lonicera japonica 'Halliana' / Halls Honeysuckle Flowering Vine
Myoporum parvifolium 'Putah Creek' / Putah Creek Myoporum
Rosmarinus officinalis 'Huntington Carpet' / Huntington Carpet Rosemary

GROUND COVER PALETTE - MEDIUM WATER USE - 1 GAL
Rosa x 'Flower Carpet Pink' / Rose
Rosa x 'Flower Carpet Red' / Rose
Trachelospermum jasminoides / Star Jasmine

4 ENVIRONMENTAL CHECKLIST

4.1 BACKGROUND

Date: November 2022
Project Title: 627 Bon View Avenue Warehouse Project
Lead Agency: City of Ontario 303 E B Street, Ontario, CA 91764
Lead Agency Contact: Alexis Vaughn, Planner (909) 395-2276 avaughn@ontarioca.gov
Project Location: The 10.05 gross-acre (10.05 net-acre) site is located within the western portion of the City of Ontario, on one parcel at 627 Bon View Avenue, Ontario CA 91761 (APN 1049-181-14).
Project Sponsor's Name and Address: 627 Bon View, LLC 150 South 5th Street, Suite 2675 Minneapolis, MN 55402
Land Use and Zoning Designation: The Project site has a General Plan land use designation of Industrial and is zoned as General Industrial (IG).
Project Description: The Project proposes to demolish the existing six buildings totaling 77,696 SF, surface parking/storage yard and related infrastructure and subdivide the existing 10.05-acre site into two parcels to construct two warehouse buildings totaling 237,236 SF with a FAR of 0.54. Additional improvements would include landscaping, sidewalks, utility connections, implementation of stormwater facilities, and pavement of parking areas and driveways. A more detailed description of the proposed Project is provided in Section 3, *Project Description*. The analysis in this document discusses the impacts identified within TOP 2050 SEIR for buildout of the site with a FAR of 0.55 and approximately 240,778 SF of general industrial uses and compares them with the impacts that would result from implementation of the proposed Project's two warehouse buildings totaling 237,236 SF.
Surrounding Land Uses and Setting: The Project site is within an urban environment, is developed with an RV and boat storage facility building and is surrounded by industrial and commercial uses.
Other Public Agencies Whose Approval is Required: None

4.2 ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The subject areas checked below were determined to be new significant environmental effects or to be previously identified effects that have a substantial increase in severity either due to a change in project, change in circumstances or new information of substantial importance, as indicated by the checklist and discussion on the following pages.

☐	Aesthetics	☐	Agriculture and Forest Resources	☐	Air Quality
☐	Biological Resources	☐	Cultural Resources	☐	Energy
☐	Geology/Soils	☐	Greenhouse Gas Emissions	☐	Hazards and Hazardous Materials
☐	Hydrology/Water Quality	☐	Land Use/Planning	☐	Mineral Resources
☐	Noise	☐	Population/Housing	☐	Public Services
☐	Recreation	☐	Transportation	☐	Tribal Cultural Resources
☐	Utilities/Service Systems	☐	Wildfire	☐	Mandatory Findings of Significance

4.3 DETERMINATION:

On the basis of this initial evaluation

☐ No substantial changes are proposed in the project and there are no substantial changes in the circumstances under which the project will be undertaken that will require major revisions to the previous approved ND or MND or certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects. Also, there is no "new information of substantial importance" as that term is used in CEQA Guidelines Section 15162(a)(3). Therefore, the previously adopted ND or MND or previously certified EIR adequately discusses the potential impacts of the project without modification.

☒ The Checklist/Addendum concludes that none of the conditions or circumstances that would require preparation of a subsequent or supplemental EIR pursuant to Public Resources Code Section 21166 and CEQA Guidelines Section 15162 exists in connection with the design of the Project. No substantial changes have been proposed to the project described in the Final EIR that require major revisions to Final EIR. No new significant environmental effects or substantial increase in the severity of previously identified significant environmental effects would occur. The Checklist/Addendum also indicates that there have not been any substantial changes with respect to the circumstances under which development of the project site, including the project, would be undertaken that would require major revisions to the Final EIR. The Checklist/Addendum concludes that no substantial changes with respect to circumstances under which the project is undertaken have occurred that have not already been accounted for. The Checklist/Addendum also concludes that no new information of substantial importance, which was not known and could not have been known at the time that the Final EIR was certified, shows that the project would cause or substantially worsen significant environmental impacts discussed in the Final EIR, that mitigation measures or alternatives found infeasible in the Final EIR would in fact be feasible, or that different mitigation measures or alternatives from those analyzed in the Final EIR would substantially reduce one or more significant environmental effects found in the Final EIR.

☐ Substantial changes are proposed in the project or there are substantial changes in the circumstances under which the project will be undertaken that will require major revisions to the previous ND, MND or EIR due to the involvement of significant new environmental effects or a substantial increase in the severity of previously identified significant effects. Or, there is "new information of substantial importance," as that term is used in CEQA Guidelines Section 15162(a)(3). However, all new potentially significant environmental effects or substantial increases in the severity of previously identified significant effects are clearly reduced to below a level of significance through the incorporation of mitigation measures agreed to by the project applicant. Therefore, a Subsequent MND is required.

☐ Substantial changes are proposed in the project or there are substantial changes in the circumstances under which the project will be undertaken that will require major revisions to the previous environmental document due to the involvement of significant new environmental effects or a substantial increase in the severity of previously identified significant effects. Or, there is "new information of substantial importance," as that term is used in CEQA Guidelines Section 15162(a)(3). However, only minor changes or additions or changes would be necessary to make the previous EIR adequate for the project in the changed situation. Therefore, a Supplemental EIR is required.

☐ Substantial changes are proposed in the project or there are substantial changes in the circumstances under which the project will be undertaken that will require major revisions to the previous environmental document due to the involvement of significant new environmental effects or a substantial increase in the severity of previously identified significant effects. Or, there is "new information of substantial importance," as that term is used in CEQA Guidelines Section 15162(a)(3) such as one or more significant effects not discussed in the previous EIR. Therefore, a SUBSEQUENT EIR is required.

Printed Name — For

4.4 EVALUATION OF ENVIRONMENTAL IMPACTS

The evaluation of environmental impacts in this addendum summarizes conclusions made in TOP 2050 SEIR and compares them to the impacts of the proposed 627 Bon View Avenue Warehouse Project. Mitigation measures referenced are from the Mitigation Monitoring Final adopted as part of TOP 2050 SEIR and are described as either being previously implemented, applicable to the proposed Project, or not applicable.

This comparative analysis has been undertaken pursuant to the provisions of CEQA and the State CEQA Guidelines, to provide the factual basis for determining whether the proposed Project, or any new information that has come to light that permits or requires the preparation of a subsequent or supplemental EIR.

The analysis herein follows the outline and format, and applies the impact thresholds of, TOP 2050 SEIR, as required by CEQA. (*Citizens Against Airport Pollution v. City of San Jose* (2014) 227 Cal.App.4th 788.) As discussed previously in Section 1.2 *Environmental Procedures*, pursuant to State CEQA Guidelines Section 15162, when an EIR has been previously certified that includes the scope of development of a site or area, no subsequent or supplemental EIR shall be prepared for the project unless the lead agency determines that one or more of the following three conditions are met: 1) the project would result in new or substantially more severe impacts than were disclosed in the previous EIR; 2) changes in the circumstances surrounding the project result in new or substantially more severe impacts than were disclosed in the previous EIR; or 3) new

information has come to light showing that new or substantially more severe impacts than were disclosed in the previous EIR will occur.

4.5 TERMINOLOGY USED IN THE CHECKLIST

For each question listed in the Environmental Checklist, a determination of the level of significance of the impact is provided. Impacts are categorized in the following categories:

Substantial Change in Project or Circumstances Resulting in New Significant Effects. A Subsequent EIR is required when 1) substantial project changes are proposed or substantial changes to the circumstances under which the project is undertaken, and 2) those changes result in new significant environmental effects or a substantial increase in the severity of previously identified significant effects, and 3) project changes require major revisions of the EIR.[2]

New Information Showing Greater Significant Effects than Previous EIR. A Subsequent EIR is required if new information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the EIR was certified, shows 1) the project will have one or more significant effects not discussed in the EIR; or 2) significant effects previously examined will be substantially more severe than shown in the EIR.[3]

New Information Identifying New Mitigation or Alternative to Reduce Significant Effect is Declined. A Subsequent EIR is required if new information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the EIR was certified shows 1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible (or new mitigation measures or alternatives are considerably different) and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative.[4]

With regard to the foregoing three categories, a Supplement to an EIR can be prepared if the criterion for a Subsequent EIR is met, and only minor additions or changes would be necessary to make the EIR adequately apply to the proposed Project.[5]

Minor Technical Changes or Additions. An Addendum to the EIR is required if only minor technical changes or additions are necessary and none of the criteria for a subsequent EIR is met.[6]

No Impact. A designation of *no impact* is given when the proposed Project would have no changes in the environment as compared to the original project analyzed in the EIR.

[2] CEQA Guidelines. California Code of Regulations (CCR), Title 14, Division 6, Chapter 3, § 15162, as amended.
[3] CEQA Guidelines. § 15162.
[4] CEQA Guidelines. § 15162.
[5] CEQA Guidelines. § 15163.
[6] CEQA Guidelines. § 15164.

5 ENVIRONMENTAL ANALYSIS

This section provides evidence to substantiate the conclusions in the environmental checklist. The section briefly summarizes the conclusions of TOP 2050 SEIR, which address development of the Area in which the Project is located; therefore, the descriptions and conclusions are applicable to the Project site. Following the summary of conclusions, is an analysis of the proposed Project's consistency with the findings contained in TOP 2050 SEIR. Mitigation measures referenced herein are from TOP 2050 SEIR.

5.1 AESTHETICS	Subsequent or Supplemental EIR			Addendum to EIR	
Would the project:	Substantial Change in Project or Circumstances Resulting in New Significant Effects	New Information Showing Greater Significant Effects than Previous EIR	New Information Identifying New Mitigation or Alternative to Reduce Significant Effect is Declined	Minor Technical Changes or Additions	No New Impact/ No Impact
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☐	☐	☒
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway	☐	☐	☐	☐	☒
c) In nonurbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☐	☐	☒
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☐	☐	☒

Summary of Impacts Identified in TOP 2050 SEIR

TOP 2050 SEIR analyzed impacts related to aesthetics in Section 5.1. TOP 2050 SEIR determined that development built pursuant to TOP would cause vistal disturbances by altering visual appearances from rural agriculture to low- and low-medium density residential land uses and to office/industrial mixed-use in some parts of the City. TOP 2050 SEIR also determined that buildout of the General Plan would create new sources of light and glare. TOP 2050 SEIR concluded that development built pursuant to the Community Design Element and the City's Development Code would ensure potential aesthetic impacts are less than significant. Overall, impacts were determined to be less than significant, and no mitigation is required.

TOP 2050 SEIR Mitigation Measures:

None.

a) Have a substantial adverse effect on a scenic vista?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR determined impacts related to scenic vistas would be less than significant.

TOP 2050 SEIR notes that visual resources within Ontario include views of the San Bernardino and San Gabriel Mountains and stretches of open space and undeveloped land south of Riverside Drive. There are no officially designated scenic highways in Ontario (Caltrans 2018); however, the Euclid Corridor and the Mission Boulevard Corridor are the primary scenic corridors in Ontario. Euclid Avenue is a grand boulevard with a wide landscaped median along its length. The median is used for public activities and civic events, such as festivals and music concerts. Visually, Euclid Avenue is the most defining corridor in the City. Mission Boulevard has a wide landscaped median and runs east-west immediately south of Ontario International Airport.

The Project site is currently developed with an RV and boat storage facility and parking/storage lot. The proposed Project would demolish the existing six structures and associated parking/storage lot to develop two new warehouse buildings totaling 237,236 SF and measuring a maximum of 45 feet in height.

Due to surrounding industrial and commercial development, distant views of the surrounding foothills of the San Bernardino Mountains are not available from public vantage points on Bon View Avenue, Ontario Boulevard, or California Street. The new warehouses would be set back from the adjacent streets and would not encroach into the existing public long-distance views. Thus, the Project would not impact any scenic vistas or protected viewsheds and impacts would be less than significant.

No new or substantially greater impacts would occur with implementation of the proposed Project when compared to those identified in TOP 2050 SEIR. Impacts from the proposed Project would be consistent with the impacts identified in TOP 2050 SEIR.

b) Substantially damage scenic resources, including, trees, rock outcroppings, and historic buildings within a state scenic highway?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR determined impacts related to scenic resources within a state scenic highway would be less than significant.

According to TOP 2050 EIR, Ontario does not contain any officially designated state scenic highways. The nearest officially designated state scenic highway is Route 142 located approximately 8 miles southwest in Chino Hills. The Project site is not located within view of a state scenic highway, as there are no designated state scenic highways within the vicinity of the site. The Project would not result in impacts to trees, rock outcroppings, or historic buildings within a state scenic highway. Therefore, no impacts to scenic resources within a state scenic highway would occur.

No new or substantially greater impacts would occur with implementation of the proposed Project when compared to those identified in TOP 2050 SEIR. Impacts from the proposed Project would be consistent with the impacts identified in TOP 2050 SEIR.

c) In nonurbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR determined that there were no significant impacts with respect to being inconsistency with policies or regulations governing scenic quality.

As described previously, the Project site is located within an urbanized area and is surrounded by roadways, and industrial and commercial uses. The existing character of the Project site and surrounding area is neither

unique nor of special aesthetic value or quality. The Project would redevelop the site with two warehouse buildings totaling 237,236 SF. Building 1 would be 45-feet-high and have a footprint of 187,145 SF with a 4,000 SF mezzanine. Building 2 would be 42-feet-high and have a footprint of 46,091 SF. Impacts to visual resources from buildout of the Project site would be less than significant with compliance with the City of Ontario Development Standards, the City's General Plan, and the Ontario Development Code. As detailed in Table AES-1, the Project would be consistent with the development standards for the IG zone. Therefore, the Project would not conflict with an applicable zoning regulation related to scenic quality, and impacts would be less than significant.

Table AES-1: Consistency with IG Development Standards

Development Feature	General Industrial (IG) Standard	Proposed Project
Maximum Floor Area Ratio	0.55 FAR	**Consistent.** Building 1: 0.54 FAR Building 2: 0.55 FAR
Building Height	55 feet maximum	**Consistent.** Building 1: 45 FT Building 2: 42 FT
Landscaping	Corner Lot: Minimum 15 percent Interior Lot: Minimum 10 percent Building 1: 15 percent Building 2: 10 percent	**Consistent.** Building 1: 53,500 SF (15.12%) Building 2: 9,000 SF (10.73%) See Figure 3-3, *Conceptual Landscape Plan*.
Off Street Parking	1) Portion of GFA 20,000 SF or Less: One space per 1,000 SF; 2) Portion of GFA Greater Than 20,000 SF: 0.5 space per 1,000 SF; 3) Tractor-Trailer Parking: One tractor-trailer parking space per 4 dock-high loading doors Building 1: 104 standard stalls required; 6 trailer stalls required Building 2: 33 standard stalls required; 2 trailer stalls required	**Consistent.** Building 1: 106 standard stalls; 23 trailer stalls Building 2: 37 standard stalls; 2 trailer stalls
Walls, Fences and Obstructions	Maximum Height: 14 FT	**Consistent.** Building 1 would include a 12-foot-high wall along the entrance of the truck court and an 8-goot high steel

Development Feature	General Industrial (IG) Standard	Proposed Project
		fence along the southern property line and western property line. Building 2 would include a 12-foot-high wall along the entrance of the truck court and 8-foot-high steel fencing along the perimeter of the property line.
Setback Minimums	From Freeway Property Line: 20 FT	N/A
	From Arterial Street Property Line: 20 FT	Ontario Boulevard and California Street are classified as arterial streets **Consistent.** Building 1 would be set back a minimum of 20 feet from Ontario Boulevard. Building 2 would be set back 33 feet from California Street.
	From Collector and Local Street Property Line: 10 FT	Bon View Avenue is classified as a collector street **Consistent.** Building 1 would be set back a minimum of 10 feet from Bon View Avenue.

Source: Ontario Development Code Table 6.01-10 and Section 6.02.025

The Project would develop the site with two warehouses of similar scale to the existing onsite uses and surrounding industrial uses. The proposed building and use would also be visually compatible with the land uses and buildings adjacent to the site. Thus, the Project would not conflict with applicable development standard criteria and other regulations governing scenic quality, nor would the Project degrade the visual character of the site and surrounding area. Impacts would be less than significant.

No new or substantially greater impacts would occur with implementation of the proposed Project when compared to those identified in TOP 2050 SEIR. Impacts from the proposed Project would be consistent with those identified in TOP 2050 SEIR.

d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR determined impacts related to new sources of lighting or glare would be less than significant.

The Project site is currently developed with developed with an RV and boat storage facility and parking/storage lot which has exterior lighting. The Project would replace existing sources of light and introduce new sources of light from new building lighting, exterior lighting, interior lights shining through building windows, and headlights from nighttime vehicular trips generated by the Project. The Project may slightly increase lighting and glare compared to the existing site condition due to lighting of the truck court, however, new landscaping would be provided throughout the Project site that would limit impacts from new sources of light and glare. For example, perimeter landscaping, including trees, would limit the spill of light onto adjacent properties. Also, as a standard condition of Project approval, the proposed Project would be required to comply with lighting standards detailed in Section 6.03.050 of the Ontario Development Code, which requires exterior light fixtures to be designed to eliminate adverse impacts of light spillover on to adjacent properties and promote safe vehicular and pedestrian access.. Compliance with the Municipal Code would be implemented through the construction permitting and plan check process. Therefore, impacts associated with new lighting would be less than significant.

No new or substantially greater impacts would occur with implementation of the proposed Project when compared to those identified in TOP 2050 SEIR. Impacts from the proposed Project would be consistent with those identified in TOP 2050 SEIR.

Conclusion

Based on the foregoing, none of the conditions identified in State CEQA Guidelines Section 15162 that would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts or mitigation measures exist regarding aesthetics. There have not been 1) changes related to development of the Project site that involve new significant environmental effects or a substantial increase in the severity of previously identified effects; 2) substantial changes with respect to the circumstances under which development of the Project site is undertaken that require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified effects; or 3) the availability of new information of substantial importance relating to significant effects or mitigation measures or alternatives that were not known and could not have been known when TOP 2050 SEIR was certified as completed.

Because none of the conditions identified in State CEQA Guidelines Section 15162 would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts, State CEQA Guidelines 15168 also does not require additional environmental review.

Regulatory Requirements (RRs)

RR AES-1. The proposed Project shall comply with lighting standards detailed in the Ontario Development Code Section 6.03.050 which requires exterior light fixtures to be designed to eliminate adverse impacts of light spillover on to adjacent properties and promote safe vehicular and pedestrian access.

Project Design Features (PDFs)

None.

Mitigation/Monitoring Required

No new impacts nor substantially more severe aesthetic impacts would result from implementation of the proposed Project; therefore, no mitigation measures are required for aesthetics.

5.2 AGRICULTURE AND FOREST RESOURCES	Subsequent or Supplemental EIR			Addendum to EIR	
In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment Project; and the forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:	Substantial Change in Project or Circumstances Resulting in New Significant Effects	New Information Showing Greater Significant Effects than Previous EIR	New Information Identifying New Mitigation or Alternative to Reduce Significant Effect is Declined	Minor Technical Changes or Additions	No New Impact/ No Impact
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☐	☒
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☐	☒
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	☐	☒
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☐	☒
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☐	☒

Summary of Impacts Identified in TOP 2050 SEIR

TOP 2050 SEIR analyzed impacts related to agriculture and forest resources in Section 5.2. TOP 2050 SEIR discusses that Ontario's land use plan no longer designates agricultural land uses in the City. Therefore, implementation of TOP 2050 would have no impact on land zoned for the purposes of agricultural uses. Buildout of the 2010 Certified EIR resulted in the cancellation or nonrenewal of Williamson Act contracts, therefore, TOP 2050 would not result in further impacts to Williamson Act lands.

According to TOP 2050 SEIR, there are no land use designations or zoning for forest land, timberland, or timberland zoned Timberland Production in the City of Ontario. As such, the project would not conflict with existing zoning for forest land, timberland, or timberland zoned Timberland Production. Additionally, since there is no forest land in Ontario, the project would not result in conversion of forest land to non-forest use. Impacts to agriculture and forestry resources would be less than significant and no mitigation is required.

TOP 2050 SEIR Mitigation Measures:
None.

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

Impacts Associated with the Proposed Project

No New Impact. The Project site is currently partially developed with industrial/commercial buildings associated parking lots. The Project site is identified as Urban and Built-Up Land by the California Important Farmland Finder (California Department of Conservation [CDC] 2022). The site is not designated as Prime, Unique, or Farmland of Statewide Importance (CDC 2022). Therefore, the Project would not have impacts related to the conversion of Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to non-agricultural use.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the proposed Project would be consistent with those identified in TOP 2050 SEIR.

b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?

Impacts Associated with the Proposed Project

No New Impact. The Williamson Act (California Land Conservation Act of 1965) restricts the use of agricultural and open space lands to farming and ranching by enabling local governments to contract with private landowners for indefinite terms in exchange for reduced property tax assessments. The Project site is not zoned for agricultural use or located within an Agricultural Resource Area. Additionally, the Project site does not have a Williamson Act contract. As such, the Project would not conflict with existing zoning for agricultural use or with an Agricultural Resource Area or Williamson Act contract, and no impacts would occur.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the proposed Project would be consistent with those identified in TOP 2050 SEIR.

c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?

Impacts Associated with the Proposed Project

No New Impact. The Project site is currently developed with an RV and boat storage facility and associated parking lot. The site does not contain forest land and there are no forestland resources in the vicinity of the Project site. It is not designated or zoned as forest land or timberland or used for timberland production. As a result, the Project would not result in impacts on timberland resources.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the proposed Project would be consistent with those identified in TOP 2050 SEIR.

d) Result in the loss of forest land or conversion of forest land to non-forest use?

Impacts Associated with the Proposed Project

No New Impact. As discussed previously, there are no forest or timberland resources on or in the vicinity of the Project site. The proposed Project would not convert forest land to a non-forest use. Therefore, there would be no impacts related to the loss of forest land or the conversion of forest land to non-forest uses.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the proposed Project would be consistent with those identified in TOP 2050 SEIR.

e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?

Impacts Associated with the Proposed Project

No New Impact. As previously stated, the Project site is currently developed with an RV and boat storage facility and associated parking lot. The site is not used for agricultural purposes and is not designated or zoned for forest land. The Project would not convert farmland to a nonagricultural use or convert forest land to a non-forest use. Therefore, no impacts would occur, and the Project would not involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the proposed Project would be consistent with those identified in TOP 2050 SEIR.

Conclusion

Based on the foregoing, none of the conditions identified in State CEQA Guidelines Section 15162 that would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts or mitigation measures exist regarding agriculture and forest resources. There have not been 1) changes related development of the Project site that involve new significant environmental effects or a substantial increase in the severity of previously identified effects; 2) substantial changes with respect to the circumstances under which development of the Project site undertaken that require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified effects; or 3) the availability of new information of substantial importance relating to significant effects or mitigation measures or alternatives that were not known and could not have been known when TOP 2050 SEIR was certified as completed.

Because none of the conditions identified in State CEQA Guidelines Section 15162 would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts, State CEQA Guidelines 15168 also does not require additional environmental review.

Regulatory Requirements (RRs)

None.

Project Design Features (PDFs)

None.

Mitigation/Monitoring Required

No new impacts nor substantially more severe agriculture and forest resources impacts would result from the Project; therefore, no new or revised mitigation measures are required for agriculture and forest resources.

5.3 AIR QUALITY	Subsequent or Supplemental EIR			Addendum to EIR	
Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:	Substantial Change in Project or Circumstances Resulting in New Significant Effects	New Information Showing Greater Significant Effects than Previous EIR	New Information Identifying New Mitigation or Alternative to Reduce Significant Effect is Declined	Minor Technical Changes or Additions	No New Impact/ No Impact
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☐	☐	☒
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non- attainment under an applicable federal or state ambient air quality standard)?	☐	☐	☐	☐	☒
c) Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☐	☐	☒
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☐	☐	☒

The discussion below is based on the Air Quality, Health Risk, Greenhouse Gas, and Energy Impact Report, prepared by LSA, November 2022, and is included as Appendix A[7].

Impacts Identified in TOP 2050 SEIR

TOP 2050 SEIR analyzed impacts related to air quality in Section 5.3. TOP 2050 SEIR found that TOP 2050 would be inconsistent with the SCAQMD AQMP because buildout under the plan would cumulatively contribute to the nonattainment designations of the basin. TOP 2050 SEIR found that incorporation of TOP 2050 SEIR Mitigation Measures 3-2 and AQ-1 into future development projects for the operation phase would reduce criteria air pollutant emissions associated with buildout. Additionally, it was determined that goals and policies in TOP 2050 would promote increased capacity for alternative transportation modes. However, TOP 2050 SEIR determined that due to the magnitude of residential units that would be developed under TOP 2050, no additional mitigation measures are available that would reduce impacts below SCAQMD thresholds. As such, impacts were found to be significant and unavoidable.

TOP 2050 SEIR determined buildout in accordance with TOP 2050 would generate short-term emissions that would exceed the South Coast AQMD's regional significance threshold and cumulatively contribute to the nonattainment designations of the SoCAB. Implementation of Mitigation Measure 3-1 and the goals and policies of TOP 2050 would reduce construction-related air pollutant emissions to the extent feasible. However, individual projects may still exceed the South Coast AQMD regional significance thresholds and impacts would remain significant and unavoidable.

TOP 2050 SEIR found that buildout in accordance with TOP 2050 would generate long-term emissions that would exceed the SCAQMD's regional significance thresholds and cumulatively contribute to the nonattainment designations of the basin. TOP 2050 SEIR identified that Mitigation Measure 3-2 and AQ-1, in addition to the goals and policies of TOP 2050, would reduce air pollutant emissions to the extent feasible. However, TOP 2050 SEIR found that impacts would remain significant and unavoidable due to the increase in VOCs from residential development associated with TOP 2050.

[7] Note: The Air Quality, Health Risk, Greenhouse Gas, and Energy Impact Report modeled the Project using a previous version of the site plan in which the proposed warehouses totaled 238,458 SF. Thus, the analysis contained herein is more conservative than the proposed Project's 237,236 SF of warehouse uses.

TOP 2050 SEIR determined that operation of industrial and warehousing land uses accommodated under TOP 2050 could expose sensitive receptors to substantial toxic air contaminant (TAC) concentrations generated from area/stationary sources and mobile sources. However, implementation of TOP 2050 would not produce the volume of traffic required to generate a CO hotspot, and CO hotspots impacts would be less than significant. Additionally, implementation of TOP 2050 may result in projects that emit TACs throughout the City, however, emissions of TACs would be controlled by South Coast AQMD through permitting and would be subject to further study and health risk assessment prior to the issuance of any necessary air quality permits under South Coast AQMD Rule 1401, which would ensure less than significant impacts. TOP 2050 SEIR found that Policy ER-4.9, New Localized Air Pollution Sources Near Existing Sensitive Receptors, would ensure mobile sources of TACs not covered under SCAQMD permits are considered during subsequent project-level environmental review by the City of Ontario. TOP 2050 SEIR concluded that individual development projects would be required to achieve the incremental risk thresholds established by SCAQMD, and TACs would be less than significant. However, implementation of TOP 2050 would generate TACs that could contribute to elevated levels in the air basin. While individual projects would achieve the project-level risk threshold of 10 per million, it was determined that they would nonetheless contribute to the higher levels of cancer risk in the basin; and therefore, result in a cumulatively considerable impact. Therefore, impacts related to cumulative contribution to health risk was determined to be significant and unavoidable.

TOP 2050 SEIR found that buildout of industrial uses permitted under TOP 2050 could include new sources of odors, however future environmental review would be required for these types of industrial projects, which would ensure that sensitive land uses are not exposed to objectionable odors. Industrial land uses associated with TOP 2050 also would be required to comply with South Coast AQMD Rule 402. Therefore, impacts from potential odors generated from industrial land uses associated with TOP 2050 are considered less than significant. TOP 2050 SEIR determined impacts from potential odors generated from residential and other nonresidential land uses associated with TOP 2050 would be less than significant. Additionally, TOP 2050 SEIR identified that construction-related odor emissions would be temporary and intermittent and are overall considered less than significant.

TOP 2050 SEIR Mitigation Measures:

Mitigation Measure 3-1: Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project construction-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology for assessing air quality impacts. If construction-related criteria air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, City of Ontario Building Department shall require feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and may include:

- Require fugitive dust control measures that exceed South Coast Air Quality Management District's Rule 403, such as:
  - Requiring use of nontoxic soil stabilizers to reduce wind erosion.
  - Applying water every four hours to active soil disturbing activities.
  - Tarping and/or maintaining a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials.
- Using construction equipment rated by the United States Environmental Protection Agency as having Tier 4 interim or higher exhaust emission limits.
- Ensuring construction equipment is properly serviced and maintained to the manufacturer's standards.
- Limiting nonessential idling of construction equipment to no more than five consecutive minutes.

- Using Super-Compliant VOC paints for coating of architectural surfaces whenever possible. A list of Super-Compliant architectural coating manufactures can be found on the South Coast Air Quality Management District's website at: http://www.aqmd.gov/prdas/brochures/Super-Compliant_AIM.pdf.

These identified measures shall be incorporated into all appropriate construction documents (e.g., construction management plans) submitted to the City and shall be verified by the City's Planning Department.

Mitigation Measure 3-2: The City of Ontario shall evaluate new development proposals within the City and require all developments to include access or linkages to alternative modes of transportation, such as transit stops, bike paths, and/or pedestrian paths (e.g. sidewalks).

Mitigation Measure AQ 1: Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project operation-phase-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology in assessing air quality impacts. If operation-related air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario Planning Department shall require that applicants for new development projects incorporate mitigation measures to reduce air pollutant emissions during operational activities. The identified measures shall be included as part of the conditions of approval. Possible mitigation measures to reduce long-term emissions could include, but are not limited to the following:

- For site-specific development that requires refrigerated vehicles, the construction documents shall demonstrate an adequate number of electrical service connections at loading docks for plug-in of the anticipated number of refrigerated trailers to reduce idling time and emissions.
- Applicants for manufacturing and light industrial uses shall consider energy storage and combined heat and power in appropriate applications to optimize renewable energy generation systems and avoid peak energy use.
- Site-specific developments with truck delivery and loading areas and truck parking spaces shall include signage as a reminder to limit idling of vehicles while parked for loading/unloading in accordance with California Air Resources Board Rule 2845 (13 CCR Chapter 10 sec. 2485).
- Provide changing/shower facilities as specified in Section A5.106.4.3 of CALGreen (Nonresidential Voluntary Measures).
- Provide bicycle parking facilities per Section A4.106.9 of CALGreen (Residential Voluntary Measures).
- Provide preferential parking spaces for low-emitting, fuel-efficient, and carpool/van vehicles per Section A5.106.5.1 of CALGreen (Nonresidential Voluntary Measures).
- Provide facilities to support electric charging stations per Section A5.106.5.3 and Section A5.106.8.2 of CALGreen (Nonresidential Voluntary Measures; Residential Voluntary Measures).
- Applicant-provided appliances shall be Energy Star–certified appliances or appliances of equivalent energy efficiency (e.g., dishwashers, refrigerators, clothes washers, and dryers). Installation of Energy Star–certified or equivalent appliances shall be verified by the City during plan check

a) Conflict with or obstruct implementation of the applicable air quality plan?

Impacts Associated with the Proposed Project

No New Impact. The Project site is located in the South Coast Air Basin (Basin) which includes parts of San Bernardino, Los Angeles, and Riverside Counties and all of Orange County. The South Coast Air Quality

Management District (SCAQMD) and the California Air Resources Board (CARB) monitor air quality within the Basin.

Air quality plans describe air pollution control strategies and measures to be implemented by a city, county, region, and/or air district. The primary purpose of an air quality plan is to bring an area that does not attain federal and State air quality standards into compliance with the requirements of the federal Clean Air Act and California Clean Air Act. In addition, air quality plans are developed to ensure that an area maintains a healthful level of air quality based on the National Ambient Air Quality Standards (NAAQS) and the California Ambient Air Quality Standards (CAAQS). The AQMP is prepared by SCAQMD and the Southern California Association of Governments (SCAG). The AQMP provides policies and control measures that reduce emissions to attain both State and federal ambient air quality standards.

According to the SCAQMD, a project is consistent with the AQMP if the project is consistent with anticipated growth and would not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP. The SCAQMD's CEQA Handbook, identifies two key indicators of consistency with the AQMP:

- Whether a project will result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP.
- Whether a project will exceed the assumptions in the AQMP based on the year of project buildout and phase.

TOP 2050 SEIR found that TOP 2050 would be inconsistent with the SCAQMD AQMP because buildout under the plan would cumulatively contribute to the nonattainment designations of the basin. TOP 2050 SEIR found that incorporation of TOP 2050 SEIR Mitigation Measures 3-2 and AQ-1 into future development projects for the operation phase would reduce criteria air pollutant emissions associated with buildout. Additionally, it was determined that goals and policies in TOP 2050 would promote increased capacity for alternative transportation modes. However, TOP 2050 SEIR determined that due to the magnitude of residential units that would be developed under TOP 2050, no additional mitigation measures are available that would reduce impacts below SCAQMD thresholds. As such, impacts were found to be significant and unavoidable.

The violations to which Consistency Criterion No. 1 refers are CAAQS and NAAQS. As shown in Table AQ-1 and Table AQ-2, below, the proposed Project would not exceed the short-term construction standards or long-term operational standards and would therefore not violate any air quality standards. Thus, no impact would occur, and the Project would be consistent with the first criterion.

Concerning Consistency Criterion No. 2, the AQMP contains air pollutant reduction strategies based on SCAG's latest growth forecasts, and SCAG's growth forecasts were defined in consultation with local governments and with reference to local general plans and specific plans. The Project is consistent with the land use designation and development density presented in TOP. The site is within the General Industrial zoning designation which accommodates a variety of light industrial uses, including warehousing/distribution, assembly, light manufacturing, research and development, storage, repair facilities, and supporting retail and professional office uses developed at a maximum FAR of 0.55. TOP 2050 SEIR analyzed buildout of 0.55 FAR, or approximately 240,778 SF of general industrial development on the Project site. The Proposed Project would develop two warehouse buildings totaling 237,236 SF, totaling 0.54 FAR, consistent with the analysis in the TOP 2050 SEIR. Building 1 would be approximately 191,145, resulting in a FAR of 0.54 while Building 2 would be approximately 46,091 SF, resulting in a FAR of 0.55.

As described in the analysis below, the emissions from the Project would be below SCAQMD emissions thresholds and would not result in an increase in the frequency or severity of existing air quality violations or cause a new violation. Therefore, impacts related to conflict with the AQMP from the proposed Project would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non- attainment under an applicable federal or state ambient air quality standard)?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR determined that buildout in accordance with TOP 2050 would generate short-term emissions that would exceed the SCAQMD's regional significance thresholds and cumulatively contribute to the nonattainment designations of the basin. TOP 2050 SEIR found that TOP 2050 SEIR Mitigation Measure 3-1 and The Ontario Plan 2050 goals and policies would reduce construction-related air pollutant emissions to the extent feasible. However, TOP 2050 SEIR determined that individual projects accommodated under TOP 2050 may exceed the SCAQMD regional significance thresholds. Therefore, it was determined that construction-related regional air quality impacts of developments that would be accommodated by TOP 2050 SEIR would be significant and unavoidable.

A Project specific air quality, health risk, greenhouse gas, and energy analysis was prepared for the proposed Project (provided as Appendix A herein). The analysis quantifies the air quality criteria pollutants[8] generated from construction and operation of the proposed Project, using CalEEMod, and compared them to SCAQMD emissions thresholds.

The Basin is in a non-attainment status for federal ozone standards, federal carbon monoxide standards, and state and federal particulate matter standards. Any development in the Basin, including the Project, could cumulatively contribute to these pollutant violations. The methodologies from the SCAQMD CEQA Air Quality Handbook are used in evaluating Project impacts. SCAQMD has established daily mass thresholds for regional pollutant emissions, which are shown in Table AQ-1. Should construction or operation of the proposed Project exceed these thresholds a significant impact could occur; however, if estimated emissions are less than the thresholds, impacts would be considered less than significant.

Table AQ-1: Maximum Daily Regional Construction Emissions

Pollutant	Construction (pounds/day)	Operations (pounds/day)
VOC	75	55
NOx	100	55
CO	550	550
PM10	150	150
PM2.5	55	55
SOx	150	150

Source: Regional Thresholds presented in this table are based on the SCAQMD Air Quality Significance Thresholds, March 2015

[8] Criteria pollutants are the only air pollutants with national air quality standards that define allowable concentrations of these substances in ambient air. Criteria pollutants include carbon monoxide (CO), oxides of nitrogen (NOx), sulfur dioxide (SOx), and particulate matter (PM10 and PM2.5). Note that ozone is another criteria pollutant; however, in terms of defining significance thresholds, ozone is represented as a threshold by its precursor components, oxides of nitrogen (NOx) and reactive organic gases.

Construction

Construction activities associated with the proposed Project would generate pollutant emissions from the following: (1) demolition of the existing structures and removal of the existing infrastructure and pavement, (2) grading, (3) site preparation, (4) building construction, (5) paving, and (6) architectural coating. The quantity of emissions generated on a daily basis would vary, depending on the intensity and types of construction activities occurring. Construction activities would generate emissions from the demolition of the existing buildings onsite totaling 77,696 SF, and onsite infrastructure. In addition, the Project would generate construction worker vehicle trips to and from the Project site during the estimated 15 months of construction. The construction emissions analysis assumes the use of Tier 2 construction equipment and that the proposed Project would comply with SCAQMD Rule 403 measures, described below.

It is mandatory for all construction projects to comply with several SCAQMD Rules, including Rule 403 for controlling fugitive dust, PM10, and PM2.5 emissions from construction activities. Rule 403 requirements include, but are not limited to, applying water in sufficient quantities to prevent the generation of visible dust plumes, applying soil binders to uncovered areas, reestablishing ground cover as quickly as possible, utilizing a wheel washing system to remove bulk material from tires and vehicle undercarriages before vehicles exit the proposed Project site, covering all trucks hauling soil with a fabric cover and maintaining a freeboard height of 12-inches, and maintaining effective cover over exposed areas. Compliance with Rule 403 is included as RR AQ-1.

In addition, implementation of SCAQMD Rule 1113, which governs the volatile organic compound (VOC) content in architectural coating, paint, thinners, and solvents is included as RR AQ-2. As shown in Table AQ-2, CalEEMod results indicate that construction emissions generated by demolition of onsite structure and construction of the Project would not exceed SCAQMD regional thresholds. Therefore, construction activities would result in a less than significant impact.

Table AQ-2: Project Construction Emissions

Construction Activity	Maximum Daily Regional Emissions (pounds/day)					
	VOC	**NOx**	**CO**	**SOx**	**PM_{10}**	**$PM_{2.5}$**
Demolition	1.4	36.8	26.4	0.1	5.2	1.7
Site Preparation	1.3	33.8	23.6	<0.1	10.0	5.5
Grading	2.1	50.3	35.7	0.1	5.7	3.1
Building Construction	1.7	26.1	24.4	0.1	3.0	1.5
Paving	1.3	15.6	16.5	<0.1	0.8	0.6
Architectural Coating	15.6	2.4	2.9	<0.1	0.4	0.2
Maximum Emissions (lbs/day)	**17.3**	**50.3**	**35.7**	**0.1**	**10.0**	**5.5**
SCAQMD Significance Thresholds	75	100	550	150	150	55
Emissions Exceed Thresholds?	**No**	**No**	**No**	**No**	**No**	**No**

Notes: VOC = volatile organic compounds, NOx = oxides of nitrogen, PM_{10} = particulate matter 10 microns or less in diameter, $PM_{2.5}$ = particulate matter 2.5 microns or less in diameter, CO = carbon monoxide, SOx = sulfur oxides
Source: Air Quality, Health Risk, Greenhouse Gas and Energy Analysis (Appendix A)

As such, potential pollutant emissions from construction of the proposed Project would not exceed SCAQMD emissions thresholds. Additionally, the Project complies with TOP 2050 SEIR Mitigation Measures 3-1 and AQ-1 which requires preparation of an air quality assessment prepared in conformance with the South Coast AQMD (see Appendix A). Therefore, the proposed project would not lead to new or substantially more severe significant impacts associated with construction-related air quality beyond those identified in TOP 2050 SEIR.

Operation

Implementation of the proposed warehouse uses would result in long-term regional emissions of criteria air pollutants and ozone precursors associated with area sources, such as natural gas consumption, landscaping, applications of architectural coatings, and consumer products. However, operational vehicular emissions would generate a majority of the emissions generated from the Project.

Conservatively, operational emissions associated with the existing 77,696 SF of RV and boat storage uses were modeled using CalEEMod and were compared to those of the proposed Project as presented in Table AQ-3.

Table AQ-3: Existing Use and Proposed Project Operational Emission

Emission Type	Pollutant Emissions (lbs/day)					
	VOC	**NOx**	**CO**	**SOx**	**PM_{10}**	**$PM_{2.5}$**
Existing Use Operational Emissions						
Area Sources	1.3	<0.1	<0.1	0.0	0.0	0.0
Energy Sources	<0.1	<0.1	<0.1	<0.1	<0.1	<0.1
Mobile Sources	<0.1	0.1	0.5	<0.1	0.1	<0.1
Total Existing Emissions	**1.3**	**0.1**	**0.5**	**<0.1**	**0.1**	**<0.1**
Proposed Project Operational Emissions						
Area Sources	5.4	<0.1	<0.1	0.0	<0.1	<0.1
Energy Sources	0.1	0.5	0.4	<0.1	<0.1	<0.1
Mobile Sources	2.1	11.9	22.2	0.1	5.4	1.5
Total Project Emissions	**7.6**	**12.4**	**22.6**	**0.1**	**5.4**	**1.5**
Net Operational Emissions	**6.3**	**12.3**	**22.1**	**0.1**	**5.3**	**1.5**

Significant?	**No**	**No**	**No**	**No**	**No**	**No**

Source: Air Quality, Health Risk, Greenhouse Gas and Energy Analysis (Appendix A)

As shown in Table AQ-3, the emission associated operation of the proposed Project would not exceed the significance criteria for VOC, NOx, CO, SOx, PM_{10}, or $PM_{2.5}$ and thus would not have a significant impact on regional air quality. Therefore, the Project's operational emissions would not exceed the NAAQS nor the CAAQS and would not result in a cumulatively considerable net increase of any criteria pollutant impacts, and impacts would be less than significant. Additionally, the proposed Project would also be required to comply with TOP 2050 SEIR Mitigation Measures 3-2 and AQ-1, which would further reduce operational emissions generated by the proposed Project. Therefore, the emissions generated by the proposed Project would be similar to those identified by TOP 2050 SEIR and impacts would remain less than significant. Therefore, the proposed project would not lead to new or more severe operational air quality impacts beyond those identified in TOP 2050 SEIR.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

c) Expose sensitive receptors to substantial pollutant concentrations?

No New Impact. TOP 2050 SEIR determined operation of industrial and warehousing land uses accommodated under TOP 2050 could expose sensitive receptors to substantial toxic air contaminant concentrations and impacts would be significant and unavoidable.

The SCAQMD recommends the evaluation of localized NOx, CO, PM_{10}, and $PM_{2.5}$ construction-related impacts to sensitive receptors in the immediate vicinity of the project site. Such an evaluation is referred to as a localized significance threshold (LST) analysis. The impacts were analyzed pursuant to the SCAQMD's Final Localized Significance Threshold Methodology. According to the LST Methodology, "off-site mobile emissions from the project should not be included in the emissions compared to the LSTs" (SCAQMD 2008). SCAQMD has developed LSTs that represent the maximum emissions from a project that are not expected to cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standards, and thus would not cause or contribute to localized air quality impacts. LSTs are developed based on the ambient concentrations of NOx, CO, PM_{10}, and $PM_{2.5}$ pollutants for each of the 38 source receptor areas (SRAs) in the SCAB. The Project site is located in SRA 4. Sensitive receptors can include uses such as long-term health care facilities, rehabilitation centers, and retirement homes. Residences, schools, playgrounds, childcare centers, and athletic facilities can also be considered sensitive receptors. Commercial and industrial facilities are not included in the definition of a sensitive receptor because employees do not typically remain onsite for a full 24 hours, but are present for shorter periods, such as up to eight hours. However, a worker receptor may be exposed to air pollutants for up to eight hours. The nearest LST sensitive receptors to the Project site are the existing residences that are 179 feet to the south of the site. The closest worker receptors are located at the industrial buildings surrounding the Project site.

The localized thresholds for development projects were derived using the SCAQMD Fact Sheet for Applying CalEEMod to Localized Significance Threshold [9] and Appendix C of the SCAQMD 2008 Final Localized Significance Threshold Methodology (SRA 4), as presented in Table AQ-4. The thresholds from SCAQMD are for one-, two-, or five-acre sites, and distances of sensitive receptors for 25 to 500 meters. The closest sensitive receptor to the Project site is a single-family residence located approximately 179 feet south of the Project site. Further single-family residences are located approximately 540 feet south of the Project site. Project construction and operation emissions were compared to the LST screening tables in SRA 4, based on a 25-meter source-receptor distance and a disturbed acreage of 3.5 acres for construction (LSA 2022).

Table AQ-4: Localized Significance Thresholds

Air Pollutant	Maximum Daily Emissions (pounds/day)	Maximum Daily Emissions (pounds/day)
	Construction	***Operation***
NOx	258.0	258.0
CO	2,605.0	2,605.0
PM_{10}	37.0	9.1
$PM_{2.5}$	11.0	2.7

Source: SCAQMD 2008: Final Localized Significance Threshold Methodology

Construction

Localized Significance Analysis. Construction of the Project may expose nearby residential sensitive receptors to airborne particulates as well as a small quantity of construction equipment pollutants (i.e., usually diesel-fueled vehicles and equipment). The localized thresholds from the mass rate look-up tables in SCAQMD's Final Localized Significance Threshold Methodology document were developed for use on projects that are less than or equal to 5-acres in size or have a disturbance of less than or equal to 5 acres daily and were used to evaluate LSTs.

Table AQ-5 provides the construction LSTs for this Project. As shown in Table AQ-5, with implementation of SCAQMD Rules 403 and 1113 (included as RR AQ-2 and RR AQ-3), the maximum daily construction emissions from the proposed Project would not exceed the applicable SCAQMD LST thresholds. Therefore, the proposed project would not lead to new or more severe LST impacts beyond those identified in TOP 2050 SEIR.

[9] SCAQMD Fact Sheet for Applying CalEEMod to Localized Significance Thresholds. http://www.aqmd.gov/docs/default-source/ceqa/handbook/localized-significance-thresholds/caleemod-guidance.pdf?sfvrsn=2od-guidance.pdf (aqmd.gov)

Table AQ-5: Localized Construction Emission Estimates (lbs/day)

Source	NO_x	CO	PM_{10}	$PM_{2.5}$
On-Site Project Emissions	50.3	34.9	9.8	5.5
Localized Significance Threshold	258.0	2,065.0	37.0	11.0
Threshold Exceeded?	**No**	**No**	**No**	**No**

Source: Air Quality, Health Risk, Greenhouse Gas and Energy Analysis (Appendix A)

Operation

Localized Significance Analysis. Project operation emissions were compared to the LST screening tables in SRA 4, based on a 25-meter source-receptor distance and a disturbed acreage of 5.0 acres for operation. As shown on Table AQ-6, the Project's localized emissions are less than the SCAQMD localized operational significance thresholds. Therefore, the proposed Project would result in a less than significant impact related to localized emissions from operational activities.

Table AQ-6: Localized Operational Emission Estimates (lbs/day)

Source	NO_x	CO	PM_{10}	$PM_{2.5}$
On-Site Project Emissions	<1.0	1.1	<1.0	<1.0
Localized Significance Threshold	258.0	2,065.0	9.1	2.7
Threshold Exceeded?	**No**	**No**	**No**	**No**

Source: Air Quality, Health Risk, Greenhouse Gas and Energy Analysis (Appendix A)

CO Hotspots. Areas of vehicle congestion have the potential to create pockets of CO called hotspots. These pockets have the potential to exceed the state one-hour standard of 20 ppm or the eight-hour standard of 9 ppm. Because CO is produced in greatest quantities from vehicle combustion and does not readily disperse into the atmosphere, adherence to ambient air quality standards is typically demonstrated through an analysis of localized CO concentrations. Hotspots are typically produced at intersections, where traffic congestion is highest because vehicles queue for longer periods and are subject to reduced speeds.

With the turnover of older vehicles and introduction of cleaner fuels, electric vehicles, and vehicles with stop-start systems (where the engine shuts down when the vehicle is stopped and restarts when the break pedal is released), as well as implementation of control technology on industrial facilities, CO concentrations in the South Coast Air Basin and the state have steadily declined.

The analysis of CO hotspots compares the volume of traffic that has the potential to generate a CO hotspot (exceedance the state one-hour standard of 20 ppm or the eight-hour standard of 9 ppm) and the volume of traffic with implementation of the Project. In 2003, the SCAQMD estimated that a project would have to increase traffic volumes at a single intersection by more than 44,000 vehicles per hour—or 24,000 vehicles per hour where vertical and/or horizontal air does not mix—in order to exceed state standards and generate a CO hot spot.

As detailed in Section 5.17, *Transportation*, shown on Table T-1, the proposed Project would generate 65 vehicle trips during the AM peak hour. During the PM peak hour, the Project would generate 66 vehicle trips. Over a 24-hour period, the Project is forecast to generate approximately 554 daily trips. Thus, the Project would not result in an increase in traffic volumes at a single intersection by more than 44,000 vehicles per hour—or 24,000 vehicles per hour where vertical and/or horizontal air does not mix and would not generate a CO hotspot. Therefore, impacts related to CO hotspots from operation of the proposed Project would be less than significant.

Construction Health Risk Assessment. A Construction Health Risk Assessment (HRA), included as Appendix A, was prepared to evaluate the health risk impacts as a result of exposure to diesel particulate matter (DPM) as a result of heavy-duty diesel trucks entering and leaving the site during operation of the proposed

warehouses. DPM has been identified by the California Air Resources Board (ARB) as a carcinogenic substance responsible for nearly 70 percent of the airborne cancer risk in California. The estimated health risk impacts were compared to the health risk significance thresholds recommended by the SCAQMD for use in CEQA assessments. The City of Ontario has not adopted a numerical significance threshold for cancer risk or non-cancer hazards. Therefore, the significance thresholds recommended by the SCAQMD were adopted for this analysis. The relevant significance thresholds are provided below:

- Cancer Risk: ten persons per million population as the maximum acceptable incremental cancer risk due to exposure to toxic air contaminants (TAC)
- Non-cancer Hazard Index: 1.0

Table AQ-7 provides a summary of the HRA modeling of cancer risks and chronic non-cancer hazards resulting from the Project's construction DPM emissions along with the SCAQMD health risk significance. As shown in Table AQ-7, the maximum cancer risk for the maximally exposed sensitive receptor would be 18.20 in one million, which would exceed the SCAQMD cancer risk threshold of 10 in one million. The worker receptor risk would be lower at 0.97 in one million, which would not exceed the 10 in one million threshold. The total chronic hazard index would be 0.046 for the maximally exposed worker receptor and 0.015 for the maximally exposed sensitive receptor, which would both be below the threshold of 1.0. In addition, the total acute hazard index would be nominal (0.000), which would also not exceed the threshold of 1.0.

Table AQ-7: Unmitigated Health Risks from Project Construction to Off-Site Receptors

Location	Carcinogenic Inhalation Health Risk in One Million	Chronic Inhalation Hazard Index	Acute Inhalation Hazard Index
Worker Receptor Risk	0.97	0.046	0.000
Sensitive Receptor Risk	18.20	0.015	0.000
SCAQMD Significance Threshold	**10.0 in one million**	**1.0**	**1.0**
Significant?	**Yes**	**No**	**No**

Source: Air Quality, Health Risk, Greenhouse Gas and Energy Analysis (Appendix A)

As indicated above, the cancer risk of 18.2 in one million would exceed SCAQMD thresholds. Therefore, consistent with TOP 2050 SEIR, implementation of TOP 2050 SEIR Mitigation Measures 3-1 and AQ-1 would be required to reduce health risks from Project construction. As required by TOP 2050 SEIR Mitigation Measures 3-1 and AQ-1, a Project-specific Air Quality Assessment conducted by LSA (Appendix A) was conducted and the recommendations of the Project-specific Air Quality Assessment are incorporated to require a note on the plans that states that the Project contractor is required to ensure all off-road diesel-powered construction equipment of 50 horsepower or more used for Project construction, at a minimum meets, the California Air Resources Board Tier 2 emissions standards equipped with Level 3 diesel particulate filters or the equivalent. Table AQ-8 identifies the results of the analysis with implementation of this Project-specific recommendation.

Table AQ-8: Mitigated Health Risks from Project Construction to Off-Site Receptors

Location	Carcinogenic Inhalation Health Risk in One Million	Chronic Inhalation Hazard Index	Acute Inhalation Hazard Index
Worker Receptor Risk	0.16	0.008	0.000
Sensitive Receptor Risk	3.08	0.003	0.000
SCAQMD Significance Threshold	**10.0 in one million**	**1.0**	**1.0**
Significant?	**No**	**No**	**No**

Source: Air Quality, Health Risk, Greenhouse Gas and Energy Analysis (Appendix A)

As shown in Table AQ-8, with implementation of the Project-specific recommendation, the cancer risk at the maximally exposed sensitive receptor would be 3.08 in one million, which would not exceed the SCAQMD

cancer risk of 10 in one million. Therefore, with implementation of TOP 2050 SEIR Mitigation Measures 3-1 and AQ-1, construction of the proposed Project would not exceed SCAQMD thresholds and would not expose nearby sensitive receptors to substantial pollutant concentrations.

Operational Health Risk Assessment: An Operational HRA (included in Appendix A) was conducted to determine the potential health risk to people living and working near the proposed Project associated with the exhaust of diesel-powered trucks and equipment. Table AQ-9 shows the carcinogenic and chronic health risks associated with operation of the proposed Project.

Table AQ-9: Health Risks from Project Operation to Off-Site Receptors

Location	Carcinogenic Inhalation Health Risk in One Million	Chronic Inhalation Hazard Index	Acute Inhalation Hazard Index
Worker Receptor Risk	0.30	0.001	0.000
Sensitive Receptor Risk	1.94	0.001	0.000
SCAQMD Significance Threshold	**10.0 in one million**	**1.0**	**1.0**
Significant?	**No**	**No**	**No**

Source: Air Quality, Health Risk, Greenhouse Gas and Energy Analysis (Appendix A)

As shown in Table AQ-9, the maximum cancer risk for the maximally exposed sensitive receptor would be 1.94 in one million, which is well below the threshold of 10 in one million. The worker receptor risk would be lower at 0.30 in one million, which would also be below the threshold of 10 in one million. The total chronic hazard index would be 0.001 for both the maximally exposed sensitive and worker receptor, which is below the threshold of 1.0. In addition, the total acute hazard index would be nominal (0.000), which would also not exceed the threshold of 1.0. As such, all health risk levels to nearby residents from operation-related emissions of TACs would be well below the SCAQMD's HRA thresholds and no significant health risk would occur from Project operation emissions.

No new or substantially greater impacts would occur with implementation of the proposed Project when compared to those identified in TOP 2050 SEIR. Impacts from the proposed Project would be consistent with those identified in TOP 2050 SEIR.

d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR found that impacts associated with odors from industrial, residential, and other land uses would be less than significant. Additionally, odors from construction activities were found to be less than significant.

Standard construction requirements would minimize odor impacts from construction, such as odors associated with diesel-powered equipment, materials from demolition activities and asphalt during paving. The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction and is thus considered less than significant. Project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with the City's solid waste regulations. Additionally, the Project would be required to implement California Air Resources Board (CARB) Rule 2485 regulations that limit idling to 5 minutes (13 CCR, Chapter 10 Section 2485), which would reduce odors from the smell of truck exhaust. The Project would also be required to comply with SCAQMD Rule 402 (RR AQ-1), which prohibits any persons from discharging air contaminants or other materials that may cause injury, detriment, nuisance, or annoyance to the public, to prevent occurrences of public nuisances associated with odors. Therefore, odor impacts associated with the Project's

construction and operations would not be significant compared to what was previously analyzed and determined in TOP 2050 SEIR.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

Conclusion

Based on the foregoing, none of the conditions identified in State CEQA Guidelines Section 15162 that would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts or mitigation measures exist regarding air quality. There have not been 1) changes related to development of the Project site that involve new significant environmental effects or a substantial increase in the severity of previously identified effects; 2) substantial changes with respect to the circumstances under which development of the Project is undertaken that require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified effects; or 3) the availability of new information of substantial importance relating to significant effects or mitigation measures or alternatives that were not known and could not have been known when TOP 2050 SEIR was certified as completed.

Because none of the conditions identified in State CEQA Guidelines Section 15162 would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts, State CEQA Guidelines 15168 also does not require additional environmental review.

Regulatory Requirements (RRs)

RR AQ-1: SCAQMD Rule 402. The construction plans and specifications shall state that the project is required to comply with the provisions of South Coast Air Quality Management District (SCAQMD) Rule 402. The project shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.

RR AQ-2: SCAQMD Rule 403. The following measures shall be incorporated into construction plans and specifications as implementation of SCAQMD Rule 403:

- All clearing, grading, earth-moving, or excavation activities shall cease when winds exceed 25 mph per SCAQMD guidelines in order to limit fugitive dust emissions.
- The contractor shall ensure that all disturbed unpaved roads and disturbed areas within the Project are watered at least three (3) times daily during dry weather. Watering, with complete coverage of disturbed areas, shall occur at least three times a day, preferably in the mid-morning, afternoon, and after work is done for the day.
- The contractor shall ensure that traffic speeds on unpaved roads and Project site areas are reduced to 15 miles per hour or less.

RR AQ-3: SCAQMD Rule 1113. The following measure shall be incorporated into construction plans and specifications as implementation of SCAQMD Rule 1113. The Project shall only use "Low-Volatile Organic Compounds (VOC)" paints (no more than 50 gram/liter of VOC) consistent with SCAQMD Rule 1113.

Project Design Features (PDFs)

None.

Mitigation/Monitoring Required

No new impacts nor substantially more severe air quality impacts would result from the proposed Project; therefore, no new or revised mitigation measures are required for air quality.

TOP 2050 SEIR Mitigation Measures Applicable to the Project

Mitigation Measure 3-1: Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project construction-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology for assessing air quality impacts. If construction-related criteria air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, City of Ontario Building Department shall require feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and may include:

- Require fugitive dust control measures that exceed South Coast Air Quality Management District's Rule 403, such as:
  - Requiring use of nontoxic soil stabilizers to reduce wind erosion.
  - Applying water every four hours to active soil disturbing activities.
  - Tarping and/or maintaining a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials.
- Using construction equipment rated by the United States Environmental Protection Agency as having Tier 4 interim or higher exhaust emission limits.
- Ensuring construction equipment is properly serviced and maintained to the manufacturer's standards.
- Limiting nonessential idling of construction equipment to no more than five consecutive minutes.
- Using Super-Compliant VOC paints for coating of architectural surfaces whenever possible. A list of Super-Compliant architectural coating manufactures can be found on the South Coast Air Quality Management District's website at: http://www.aqmd.gov/prdas/brochures/Super-Compliant_AIM.pdf.

These identified measures shall be incorporated into all appropriate construction documents (e.g., construction management plans) submitted to the City and shall be verified by the City's Planning Department.

Status: Satisfied through Air Quality, Health Risk, Greenhouse Gas and Energy Analysis prepared by prepared by LSA, November 2022. In compliance with the requirements of TOP 2050 SEIR Mitigation Measure 3-1, the Project shall comply with the recommendation in the Air Quality, Health Risk, Greenhouse Gas and Energy Analysis and shall place a note on the plans requiring the Project contractor to ensure all off-road diesel-powered construction equipment of 50 horsepower or more used for Project construction, at a minimum, meets the California Air Resources Board Tier 2 emissions standards equipped with Level 3 diesel particulate filters or the equivalent.

Mitigation Measure AQ 1: Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project operation-phase-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology in assessing air quality impacts. If operation-related air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario Planning Department shall require that applicants for new development projects incorporate mitigation measures to reduce air pollutant emissions during operational activities. The identified measures shall be included as part

of the conditions of approval. Possible mitigation measures to reduce long-term emissions could include, but are not limited to the following:

- For site-specific development that requires refrigerated vehicles, the construction documents shall demonstrate an adequate number of electrical service connections at loading docks for plug-in of the anticipated number of refrigerated trailers to reduce idling time and emissions.
- Applicants for manufacturing and light industrial uses shall consider energy storage and combined heat and power in appropriate applications to optimize renewable energy generation systems and avoid peak energy use.
- Site-specific developments with truck delivery and loading areas and truck parking spaces shall include signage as a reminder to limit idling of vehicles while parked for loading/unloading in accordance with California Air Resources Board Rule 2845 (13 CCR Chapter 10 sec. 2485).
- Provide changing/shower facilities as specified in Section A5.106.4.3 of CALGreen (Nonresidential Voluntary Measures).
- Provide bicycle parking facilities per Section A4.106.9 of CALGreen (Residential Voluntary Measures).
- Provide preferential parking spaces for low-emitting, fuel-efficient, and carpool/van vehicles per Section A5.106.5.1 of CALGreen (Nonresidential Voluntary Measures).
- Provide facilities to support electric charging stations per Section A5.106.5.3 and Section A5.106.8.2 of CALGreen (Nonresidential Voluntary Measures; Residential Voluntary Measures).
- Applicant-provided appliances shall be Energy Star–certified appliances or appliances of equivalent energy efficiency (e.g., dishwashers, refrigerators, clothes washers, and dryers). Installation of Energy Star–certified or equivalent appliances shall be verified by the City during plan check

Status: Satisfied through Air Quality, Health Risk, Greenhouse Gas and Energy Analysis prepared by prepared by LSA, November 2022. In compliance with the requirements of TOP 2050 SEIR Mitigation Measure 3-1, the Project shall comply with the recommendation in the Air Quality, Health Risk, Greenhouse Gas and Energy Analysis and shall place a note on the plans requiring the Project contractor to ensure all off-road diesel-powered construction equipment of 50 horsepower or more used for Project construction, at a minimum, meets the California Air Resources Board Tier 2 emissions standards equipped with Level 3 diesel particulate filters or the equivalent.

5.4 BIOLOGICAL RESOURCES	Subsequent or Supplemental EIR			Addendum to EIR	
Would the project:	Substantial Change in Project or Circumstances Resulting in New Significant Effects	New Information Showing Greater Significant Effects than Previous EIR	New Information Identifying New Mitigation or Alternative to Reduce Significant Effect is Declined	Minor Technical Changes or Additions	No New Impact/ No Impact
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☐	☐	☐	☒
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or US Fish and Wildlife Service?	☐	☐	☐	☐	☒
c) Have a substantial adverse effect on federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☐	☒
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☐	☐	☒

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☐	☒

This section is based on the General Biological Assessment prepared by Hernandez Environmental Services in July 2022 (HES 2022) and included as Appendix B.

Summary of Impacts Identified in TOP 2050 SEIR

TOP 2050 SEIR analyzed impacts from buildout of the project area related to biological resources in Section 5.4. TOP 2050 SEIR concluded that implementation of TOP 2050 could result in in habitat modification and removal, which could result in the introduction of nonnative species of weeds, insects, and domestic animals that could adversely impact sensitive species. Furthermore, buildout of the TOP 2050 could develop vacant land, which may affect sensitive species. However, regulatory requirements and standard conditions of approval would be required upon implementation of subsequent projects, which would reduce potential impacts of the project on biological resources to less than significant. Further, TOP 2050 includes policies to ensure that special-status species and habitat are protected through compliance with state and federal regulations (e.g., Policies ER-5.1 and ER-5.2).

Implementation of TOP 2050 would not result in direct vegetation removal in surface water areas in the City; however, projects approved pursuant to TOP 2050 could indirectly result in such removal. Projects that would result in impacts to surface water areas determined to be jurisdictional to the state would require CDFW approval pursuant to the Fish and Game Code (Section 1600 et. seq.) in the form of Streambed Alteration Agreements. Overall, TOP 2050 SEIR found that TOP 2050 would not have substantial adverse impacts to surface water areas, or to riparian or aquatic vegetation in surface water areas or flood control channels.

TOP 2050 SEIR found that the TOP 2050 would not have substantial adverse impacts on jurisdictional waters because projects that have the potential to result in impact to waters of the State would be subject to approval by California Department of Fish and Wildlife (CDFW) and United States Army Corps of Engineers (USACE), require a Section 404 permit under the Clean Water Act (CWA) or consultation with the EPA for a Section 7 take permit, and mitigation would be required in accordance with the applicable permits.

TOP 2050 SEIR found that no regional wildlife movement corridors have been identified in the City. Therefore, TOP 2050 would not result in substantial adverse effects to wildlife movement.

TOP 2050 SEIR found that TOP 2050 would not conflict with the requirements of the Delhi Sands Flower-Loving Fly (DSFLF) Ontario Recovery Unit, which includes 21.7 square miles of Ontario, mostly in the eastern and southwestern portions of the City or the habitat conservation plan (HCP) which includes a 19-acre area near the intersection of Greystone Drive and the eastern city boundary established to protect the DSFLF. Any project proposed for development within this HCP pursuant to TOP 2050 would be required to consult with the USFWS regarding project impacts on DSFLF and mitigation of any such impacts. TOP 2050 SEIR determined that the project would comply with this HCP and impacts would be less than significant.

TOP 2050 SEIR Mitigation Measures:

None.

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR concluded that TOP 2050 could result in in habitat modification and removal, which could result in the introduction of nonnative species of weeds, insects, and domestic animals that could adversely impact sensitive species. Furthermore, buildout of the project could develop vacant land, which may affect sensitive species. However, regulatory requirements and standard conditions of approval would be required upon implementation of subsequent projects, which would reduce potential impacts of TOP 2050 on biological resources to less than significant.

A General Biological Assessment (GBA) was prepared for the proposed Project, which included a field survey conducted on May 20, 2022. The GBA describes that the Project site consists of developed and disturbed land with large warehouses and shade structures that are used for RV and boat storage on the northern portion of the site and a disturbed dirt lot covered in gravel that is used for storage of large metal materials on the southern portion of the site.

A records search of a five-mile radius around the Project site was used to identify sensitive species with the California Natural Diversity Data Base (CNDDB), the U.S. Fish and Wildlife Service (USFWS) Endangered Species Lists, and the California Native Plant Society (CNPS) rare plant lists to obtain species information

for the Project area. According to the CNDDB, a total of 54 sensitive species of plants and 66 sensitive species of animals have the potential to occur on or within the vicinity of the Project site.
Of the 53 sensitive plant species, a total of 14 plant species are listed as state and/or federal Threatened, Endangered, or Candidate species. The field survey did not identify suitable habitat for any of the plant species present on the Project site. Therefore, implementation of the Project would have a less than significant impact on sensitive plant species.

Of the 66 sensitive species of animals identified, 16 are listed as state and/or federal Threatened, Endangered, or Candidate. The field survey did not identify suitable habitat for any of the animal species present on the Project site.

The Project site contains shrubs and trees that could be utilized by nesting birds and raptors during the nesting bird season of February 1 through September 15. Therefore, the proposed Project has the potential to impact active bird nests if vegetation is removed during the nesting season. Nesting birds are protected under the federal Migratory Bird Treaty Act (MBTA) (United States Code Title 33, Section 703 et seq.; see also Code of Federal Regulations Title 50, Part 10) and Section 3503 of the California Fish and Game Code. Compliance with these existing regulations, included as RR BIO-1, would ensure potential impacts related to nesting avian species and native wildlife nursery sites to a less than significant level.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the proposed Project would be consistent with those identified in TOP 2050 SEIR.

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR found that the project would not have substantial adverse impacts on jurisdictional waters because projects that have the potential to result in impact to waters of the State would be subject to approval by California Department of Fish and Wildlife (CDFW) and United States Army Corps of Engineers (USACE), require a Section 404 permit under the Clean Water Act (CWA) or consultation with the EPA for a Section 7 take permit, and mitigation would be required in accordance with the applicable permits.

As described above, the Project site is developed, completely disturbed and contains ornamental landscaping and trees. No riparian habitat or sensitive natural communities exist on the site (HES 2022). Therefore, no significant impacts related to riparian habitat or other sensitive natural communities identified in local or regional plans would result from proposed Project implementation, and no mitigation is required.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the proposed Project would be consistent with those identified in TOP 2050 SEIR.

c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR found that TOP 2050 would not have substantial adverse impacts on jurisdictional waters because projects that have the potential to result in impact to waters of the State would be subject to approval by California Department of Fish and Wildlife (CDFW) and United States Army

Corps of Engineers (USACE), require a Section 404 permit under the Clean Water Act (CWA) or consultation with the EPA for a Section 7 take permit, and mitigation would be required in accordance with the applicable permits.

As described previously, the Project site is completely disturbed and developed with urban uses. No natural hydrologic features or federally protected wetlands as defined by Section 404 of the Clean Water Act occur onsite, and the Project site does not meet the Army Corps of Engineers criteria for wetlands and waters of the U.S. (HES 2022). Therefore, no direct removal, filling, or hydrological interruption of a wetland area would occur with development of the Project site.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the proposed Project would be consistent with those identified in TOP 2050 SEIR.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR found that no regional wildlife movement corridors have been identified in the City. Therefore, TOP 2050 would not result in substantial adverse effects to wildlife movement.

The Project site does not contain wildlife habitat and is located within a developed urban area. The Project area is developed and surrounded by urban developed land uses, including roadways. Therefore, no impacts to wildlife corridors would occur.

There is existing ornamental landscaping and trees on the site that have the potential to provide habitat for nesting migratory birds. Therefore, there is a potential for the proposed Project to impact related to nesting birds, however, adherence to RR BIO-1 would mitigate potential impacts to a less than significant level.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the proposed Project would be consistent with those identified in TOP 2050 SEIR.

e) Conflict with any local policies or ordinances protecting biological resources?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR concluded that TOP 2050 would not conflict with local policies or ordinances protecting biological resources.

The proposed Project would not conflict with any local policies or ordinances protecting biological resources. As discussed previously, the Project site contains ornamental shrubs and trees. The preservation, removal, and planting of parkway trees in the City is addressed in Article 10, Chapter 2, *Parkway Tree Regulations*, of the Ontario Municipal Code. The City defines Parkways as "that portion any public street right-of-way between the right-of-way boundary line and the curb line, and also the area enclosed within the curblines of a median divider." The removal or relocation of any parkway trees must receive prior authorization from the Public Works Agency of the City through a permitting process. Planting of a replacement parkway tree that is in accordance with the criteria outlined in Section 10-2.07 of the City's Municipal code shall be a condition included in any removal permit issued by the City whenever feasible. If it is not feasible to plant a replacement parkway tree, the Public Facilities Manger establishes a fair value for the cash in lieu deposit to be accepted by the City as an alternate. The routine maintenance, such as watering and trimming, of any parkway trees abutting a property is the responsibility of the abutting property owner. Should the proposed

Project result in the removal or planting of trees, it would be required to comply with Municipal Code Article 10, Chapter 2 (RR BIO-2). As a result, impacts would be less than significant.
No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the proposed Project would be consistent with those identified in TOP 2050 SEIR.

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR concluded that TOP 2050 would not conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Plan, or other approved local, regional, or state habitat conservation plan.

The Project site is not located within a within any established Habitat Conservation Plan, Natural Community Conservation Plan, or other approved type of habitat conservation plan. Therefore, the Project would not be anticipated to conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan. No impact would occur.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the proposed Project would be consistent with those identified in TOP 2050 SEIR.

Conclusion

Based on the foregoing, none of the conditions identified in State CEQA Guidelines Section 15162 that would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts or mitigation measures exist regarding biological resources. There have not been 1) changes related to development of the Project site that involve new significant environmental effects or a substantial increase in the severity of previously identified effects; 2) substantial changes with respect to the circumstances under which development of the Project site is undertaken that require major revisions of TOP 2050 SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified effects; or 3) the availability of new information of substantial importance relating to significant effects or mitigation measures or alternatives that were not known and could not have been known when TOP 2050 SEIR was certified as completed.

Because none of the conditions identified in State CEQA Guidelines Section 15162 would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts, State CEQA Guidelines 15168 also does not require additional environmental review.

Regulatory Requirements (RRs)

RR BIO-1: Migratory Bird Treaty Act. The Project shall comply with the Migratory Bird Treaty Act (MBTA) (United States Code Title 33, Section 703 et seq.; see also Code of Federal Regulations Title 50, Part 10) and Section 3503 of the California Fish and Game Code during the avian nesting and breeding season that occurs between February 1 and September 15. The provisions of the MBTA prohibits disturbing or destroying active nests.

RR BIO-2: Parkway Trees. Removal and or installation of parkway trees shall occur in compliance with the City of Ontario Municipal Code Article 10, Chapter 2, Parkway Tree Regulations.

Project Design Features (PDFs)

None.

Mitigation/Monitoring Required

No new impacts nor substantially more severe biological resources impacts would result from implementation of the proposed Project; therefore, no new or revised mitigation measures are required for biological resources.

5.5 CULTURAL AND PALEONTOLOGICAL RESOURCES	Subsequent or Supplemental EIR			Addendum to EIR

a) Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5?	☐	☐	☐	☐	☒
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	☐	☐	☐	☐	☒
c) Disturb any human remains, including those interred outside of formal cemeteries?	☐	☐	☐	☐	☒

The discussion below is based on the Cultural Resources Study for the 627 Bon View Project, prepared by Brian F. Smith and Associates, Inc. in August 2022 (BFSA 2022a) and included as Appendix C and the Historical Resources Assessment, prepared by Urbana Preservation & Planning in September 2022 (Urbana 2022) and included as Appendix D.

Summary of Impacts Identified in TOP 2050 SEIR

TOP 2050 SEIR analyzed impacts related to archaeological and historical resources in Section 5.5. The Ontario The Development Code establishes criteria for Tier I, Tier II or Tier III properties, with Tier I and II being of the highest value. Tier I consists of properties that should not be demolished or significantly altered under any circumstances, regardless of their designation status. Tier II consists of properties where demolition of these properties should be avoided. Tier III consists of all properties that are Designated Historic Landmarks, are contributing structures in Designated Historic Districts, or are Eligible Historical Resources, as defined by the Development Code. TOP 2050 SEIR found that implementation of TOP 2050 land use plan could threaten historic resources classified as Tier III, especially within growth focus areas, and impacts would remain significant and unavoidable after mitigation.

TOP 2050 SEIR found that buildout of TOP 2050 could impact archeological resources or paleontological resources. However, TOP 2050 SEIR identified that existing federal, state, and local regulations in addition to Mitigation Measure 5-2 would reduce impacts to archeological resources to less than significant.

TOP 2050 SEIR found that grading activities in Ontario would comply with PRC Section 5079.98 so as not to disturb human remains.

TOP 2050 SEIR Mitigation Measures:

Mitigation Measures 5-1: Historic or potentially historic resources in the City shall be evaluated for historic significance through the City's tier system prior to the issuance of plan or development approvals Pursuant to City's Development Code (Chapter 4, Permits, Actions, and Decisions, and Chapter 7, Historic Preservation), mitigation measures for all Tier III Historic Resources shall include the following:

a) Each historic resource shall be fully documented and cataloged pursuant to Historic American Building Survey/Historic American Engineering Record (HABS/HAER) standards, to provide a record

of the resource, including, but not limited to: [i] the preparation of site plans, floor plans, exterior and interior elevations, and detail drawings of character defining features (such as moldings, stairs, etc.); and [ii] photographs of the resource, including the exterior, interior, and interior and exterior character defining features (such as moldings, light fixtures, trim patterns, etc.).

b) A mitigation fee established pursuant to Section 7.01.030 (Historic Preservation Mitigation Fee) shall be paid to the City prior to the issuance of a demolition permit for Tier III historic resources. Fees for Tier I and II historic resources shall be determined during the Environmental Impact Report process. The fees established for Tier III will be used as a reference point for establishing fees for Tier I and II historic resources.

c) A Certificate of Appropriateness shall not be issued for the demolition of an historic resource, either in whole or in part, until such time that a demolition permit application and a replacement structure has been approved by the City, and appropriate permits have been issued for its construction, unless: [i] a waiver is granted pursuant to Subsection H (Replacement Structure Waiver for Historic Resources Located within Industrial Zoning Districts) of Section 4.02.050; [ii] a deferral of the replacement structure requirement is granted pursuant to Subsection G (Replacement Structure Deferral) of Section 4.02.050; or [iii] demolition is required pursuant to Section 7.01.050 (Unsafe or Dangerous Conditions) of this Development Code.

d) In an effort to preserve features and artifacts from historic resources, a determination whether items within or on the resource should be salvaged must be made by the Planning Department and may include the local historical society prior to the issuance of the demolition permit. The applicant shall be responsible for the removal, relocation, storage, and donation of such items selected for salvaging. The applicant shall provide an inventory of salvaged items to the Planning Department, and shall include a list of each item name, description, and dimension (as necessary), and the location of each item on a floor plan.

Mitigation Measure 5-2: In areas of documented or inferred from evident archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements:

a) Archaeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities.

b) Should any cultural resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources.

c) Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including a catalog with museum numbers.

Impacts Associated with the Proposed Project

a) Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5?

No New Impact. TOP 2050 SEIR found that implementation of TOP 2050 land use plan could threaten historic resources classified as Tier III, especially within growth focus areas, and impacts would remain significant and unavoidable after mitigation.

According to the *State CEQA Guidelines*, a historical resource is defined as something that meets one or more of the following criteria: (1) listed in, or determined eligible for listing in, the California Register of Historical Resources; (2) listed in a local register of historical resources as defined in Public Resources Code (PRC) Section 5020.1(k); (3) identified as significant in a historical resources survey meeting the requirements of PRC Section 5024.1(g); or (4) determined to be a historical resource by the Project's Lead Agency. Implementation of the proposed Project would not cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5 of the State CEQA Guidelines, as there are no eligible historical resources on the Project site.

The California Register of Historical Resources defines a "historical resource" as a resource that meets one or more of the following criteria: (1) associated with events that have made a significant contribution to the broad patterns or local or regional history of the cultural heritage of California or the United States; (2) associated with the lives of persons important to local, California, or national history; (3) embodies the distinctive characteristics of a type, period, region, or method of construction or represents the work of a master or possesses high artistic values; or (4) has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

As part of the Cultural Resources Study, Brian F. Smith and Associates, Inc. (BFSA) requested a records search of a one-mile radius surrounding the Project site from the South Central Coastal Information Center (SCCIC) at California State University, Fullerton (CSU Fullerton) and the Natural History Museum of Los Angeles County (LACM) (Appendix C). The cultural resources records search, which was completed at the SCCIC on May 18, 2022, identified 17 previous studies within one mile of the Project site. Of the 17 previous studies identified, none of them included the Project site. Additionally, the records search identified 19 historic resources recorded within one mile of the Project site, four of which are within the Project site boundaries.

The Cultural Resources Study identified five structures on the Project site, four of which are historic-period structures associated with the Bestile Manufacturing Company. A Historical Resources Assessment (HRA) (Appendix D) was conducted to determine whether the identified structures have any historical significance as it relates to CEQA. The HRA found that the four subject properties located on the site are not eligible for listing in the National Register of Historic Places (NR) or California Register of Historical Resources (CR) at any level, or for local designation (Urbana 2022). Therefore, the Project would not result in a new impact related to an adverse change in the significance of a historic resource.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR found that buildout of TOP 2050 could impact archeological resources or paleontological resources. However, TOP 2050 SEIR identified that existing federal, state, and local regulations in addition to Mitigation Measure 5-2 would reduce impacts to archeological resources to less than significant.

As discussed in response a) above, the Project site has been previously disturbed from past uses that involve grading and building construction. Because the site has previously been disturbed, there is reduced potential

for the Project to impact archeological resources. However, the Project may result in excavation into the underlying alluvial sediments where undiscovered archaeological resources could exist, including archaeological resources that are also tribal cultural resources. TOP 2050 SEIR Mitigation Measure 5-2 requires the retention of a qualified archaeologist during ground disturbing activities in the event that a resource be discovered during ground disturbing activities. With implementation of TOP 2050 SEIR Mitigation Measure 5-2, the Project would not cause a substantial adverse change in the significance of an archaeological resource and impacts would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

c) Disturb any human remains, including those interred outside of formal cemeteries?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR found that grading activities in Ontario would comply with PRC Section 5079.98 so as not to disturb human remains.

The Project site has been previously disturbed, as described above, and has not been previously used as a cemetery. It is not anticipated that implementation of the proposed Project would result in the disturbance of human remains. However, in the unlikely event that human remains are encountered during earth removal or disturbance activities, the California Health and Safety Code Section 7050.5 (included as RR CUL-1) requires that disturbance of the site shall halt until the coroner has conducted an investigation into the circumstances, manner, and cause of any death, and the recommendations concerning the treatment and disposition of the human remains have been made to the person responsible for the excavation or to his or her authorized representative. The Coroner would also be contacted pursuant to Sections 5097.98 and 5097.99 of the Public Resources Code relative to Native American remains. In the event the Coroner determines the human remains to be of Native American descent, the coroner has 24 hours to notify the Native American Heritage Commission (NAHC). The NAHC would then be required to contact the most likely descendant of the deceased Native American, who would then serve as a consultant on how to proceed with the remains. Compliance with the established regulatory framework (i.e., California Health and Safety Code Section 7050.5 and Public Resources Code Section 5097.98) would reduce potential impacts involving disturbance to human remains would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

Conclusion

Based on the foregoing, none of the conditions identified in State CEQA Guidelines Section 15162 that would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate proposed Project impacts or mitigation measures exist regarding cultural resources. There have not been 1) changes related to development of the Project site that involve new significant environmental effects or a substantial increase in the severity of previously identified effects; 2) substantial changes with respect to the circumstances under which development of the Project site is undertaken that require major revisions of TOP 2050 SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified effects; or 3) the availability of new information of substantial importance relating to significant effects or mitigation measures or alternatives that were not known and could not have been known when TOP 2050 SEIR was certified as completed.

Because none of the conditions identified in State CEQA Guidelines Section 15162 would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts, State CEQA Guidelines 15168 also does not require additional environmental review.

Regulatory Requirements (RRs)

RR CUL-1: Should human remains be discovered during Project construction, the Project would be required to comply with State Health and Safety Code Section 7050.5, which states that no further disturbance may occur in the vicinity of the body until the County Coroner has made a determination of origin and disposition pursuant to Public Resources Code Section 5097.98. The County Coroner must be notified of the find immediately. If the remains are determined to be prehistoric, the Coroner will notify the Native American Heritage Commission, which will determine the identity of and notify a Most Likely Descendant (MLD). With the permission of the landowner or his/her authorized representative, the MLD may inspect the site of the discovery. The MLD must complete the inspection within 48 hours of notification by the NAHC.

Project Design Features (PDFs)

None.

Mitigation/Monitoring Required

No new impacts nor substantially more severe cultural resources impacts would result from implementation of the proposed Project; therefore, no new mitigation measures are required for cultural resources.

TOP 2050 SEIR Mitigation Measures Applicable to the Project

Mitigation Measure 5-2: In areas of documented or inferred from evident archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements:

a) Archaeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities.

b) Should any cultural resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources.

c) Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including a catalog with museum numbers.

Status: Satisfied through Cultural Resources Study for the 627 Bon View Project, prepared by Brian F. Smith and Associates, Inc. in August 2022.

5.6 ENERGY	Subsequent or Supplemental EIR			Addendum to EIR	
Would the project:	Substantial Change in Project or Circumstances Resulting in New Significant Effects	New Information Showing Greater Significant Effects than Previous EIR	New Information Identifying New Mitigation or Alternative to Reduce Significant Effect is Declined	Minor Technical Changes or Additions	No New Impact/ No Impact
a) Result in potentially significant environmental impacts due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☐	☐	☒
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☐	☐	☒

The discussion below is based on the Air Quality, Health Risk, Greenhouse Gas, and Energy Impact Report, prepared by LSA in November 2022, and included as Appendix A.

Summary of Impacts Identified in Top 2050 SEIR

TOP 2050 SEIR analyzed impacts related to energy in Section 5.6. TOP 2050 SEIR determined development projects constructed under TOP 2050 would create temporary demands for electricity through the use of electric-powered construction equipment. Natural gas is not generally required to power construction equipment, and therefore is not anticipated during construction phases. Development projects would also temporarily increase demands for energy (diesel fuel and gasoline) associated with transportation. Construction contractors would be required to minimize nonessential idling of construction equipment during construction in accordance with the California Code of Regulations Title 13, Article 4.8, Chapter 9, Section 2449 which would limit wasteful and unnecessary energy consumption. Further, the construction processes for future development projects accommodated under TOP 2050 would be similar to the construction processes of current development projects and projects accommodated under TOP. Therefore, TOP 2050 SEIR determined TOP 2050 would not result in wasteful, inefficient, or unnecessary consumption of fuel use during construction.

Operation of new development projects built under TOP 2050 would create additional demands for electricity and natural gas through uses such as heating, cooling, and ventilation of buildings; water heating; operation of electrical systems; use of on-site equipment and appliances; and lighting. However developments built under TOP 2050 would be required to comply with the current and future updates to the Building Energy Efficiency Standards and CALGreen, which would contribute in reducing the energy demands. In addition to an increase in use of electricity and natural gas, TOP 2050 would result in an overall increase in VMT and fuel usage for gasoline-, diesel-, compressed natural gas- and electricity-powered vehicles.

Overall, regulatory compliance (e.g., Building Energy Efficiency Standards, CALGreen, RPS, and CAFÉ standards) will increase building energy efficiency and vehicle fuel efficiency and reduce building energy demand and transportation-related fuel usage. Additionally, TOP 2050 includes policies related to land use and transportation planning and design, energy efficiency, public and active transit, and renewable energy generation that will contribute to minimizing building and transportation-related energy demands overall and demands on nonrenewable sources of energy. Implementation of proposed policies under TOP 2050 and CCAP in conjunction with regulatory requirements would ensure that energy demand associated with growth under TOP 2050 would not be inefficient, wasteful, or unnecessary.

TOP 2050 SEIR also found that implementation of TOP 2050 would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. Therefore, impacts related to energy would be less than significant.

TOP 2050 SEIR Mitigation Measures:

None.

a) Result in potentially significant environmental impacts due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Impacts Associated with the Proposed Project

No New Impact.

Construction

During construction of the Project would consume energy in three general forms:

1) Petroleum-based fuels used to power off-road construction vehicles and equipment on the Project site, construction worker travel to and from the Project site, as well as delivery truck trips;
2) Electricity associated with providing temporary power for lighting and electric equipment; and
3) Energy used in the production of construction materials, such as asphalt, steel, concrete, pipes, and manufactured or processed materials such as lumber and glass.

Construction activities related to redevelopment of the site with industrial uses would be required to comply with existing fuel standards, machinery efficiency standards, and California Air Resources Board (CARB) requirements that limit idling of trucks. Through compliance with existing standards, the Project would not result in demand for fuel greater on a per-development basis than other development projects in Southern California. There are no unusual Project characteristics that would cause the use of construction equipment that would be less energy efficient compared to other similar construction sites in other parts of the state. In addition, the extent of construction activities that would occur are limited to an approximate 15-month period, and the demand for construction-related electricity and fuels would be limited to that timeframe.

TOP 2050 SEIR determined that development projects constructed under TOP 2050 would create temporary demands for electricity and would also temporarily increase demands for energy associated with transportation. TOP 2050 SEIR found that most off-road construction equipment, such as those used during demolition and grading, would be gas or diesel powered and that all operation of construction equipment would cease upon completion of Project construction.

Furthermore, consistent with TOP 2050 SEIR, construction contractors are required to demonstrate compliance with applicable CARB regulations governing the accelerated retrofitting, repowering, or replacement of heavy-duty diesel on- and off-road equipment as part of the City's construction permitting process. In addition, compliance with existing CARB idling restrictions would reduce fuel combustion and energy consumption.

Table E-1 summarizes the Project's construction vehicle fuel usage. The fuel usage is based on the vehicle type (worker vehicle, vendor vehicle, and haul truck), vehicle miles traveled, and fuel usage factors contained in the ARB EMFAC2021 mobile source emission model.

Table E-1: Energy Consumption Estimates During Project Consumption

Energy Type	Total Energy Consumption	Percentage Increase Countywide
Diesel Fuel (total gallons)	77,764.3	0.01
Gasoline (total gallons)	54,612.8	0.02

Source: Air Quality, Health Risk, Greenhouse Gas, Energy Impact Report (Appendix A)

As indicated in Table E-1, the Project would consume approximately 77,764.3 gallons of diesel fuel and approximately 54,612.8 gallons of gasoline during construction. Based on fuel consumption obtained from EMFAC2021, approximately 321.6 million gallons of diesel and approximately 917.9 million gallons of gasoline will be consumed from vehicle trips in San Bernardino County in 2022. Therefore, construction of the proposed Project would increase the annual construction generated fuel use in San Bernardino County by approximately 0.01 percent for diesel fuel usage and by 0.02 percent for gasoline fuel usage. As such, Project construction would have a negligible effect on local and regional energy supplies. Furthermore, impacts related to energy use during construction would be temporary and relatively small in comparison to San Bernardino County's overall use of the State's available energy resources.

Through compliance with existing standards the Project would not result in demand for fuel greater on a per-development basis than other development projects in Southern California. There are no unusual project characteristics that would cause the use of construction equipment that would be less energy efficient compared with other similar construction sites in other parts of the State. Therefore, construction-related fuel consumption by the Project would not result in inefficient, wasteful, or unnecessary energy use and impacts would be less than significant.

Operation

TOP 2050 SEIR determined operation of new development projects accommodated under TOP 2050 would create additional demands for electricity and natural gas compared to existing conditions. Once operational, the Project would generate demand for electricity, natural gas, as well as gasoline for fuel tanks. Operational use of energy includes the heating, cooling, and lighting of the building, water heating, operation of electrical systems, parking lot and outdoor lighting, and the transport of electricity, natural gas, and water to the areas where they would be utilized. The proposed Project would also result in energy usage associated with gasoline and diesel fuel consumed by Project-related vehicle and truck trips. This use of energy is typical for urban development, and no operational activities or land uses would occur that would result in extraordinary energy consumption. Conservatively, operational energy usage associated with the exiting 77,696 SF of RV and boat storage uses on site were modeled and were compared to those of the proposed Project as presented in Table E-2.

Table E-2: Energy Consumption Estimates During Project Operation

Energy Type	Annual Energy Consumption
Existing Uses Operational Energy Consumption	
Electricity Consumption (kWh/year)	247,073
Natural Gas Consumption (therms/year)	1,951
Proposed Project Operational Energy Consumption	
Electricity Consumption (kWh/year)	923,951
Natural Gas Consumption (therms/year)	18,772
Net Electricity Consumption	**676,878**
Net Natural Gas Consumption	**16,821**
Existing Uses Automotive Fuel Consumption	
Gasoline (gallons/year)	2,423.5
Diesel Fuel (gallons/year)	321.2
Proposed Project Automotive Fuel Consumption	
Gasoline (gallons/year)	66,832.0
Diesel Fuel (gallons/year)	90,411.7
Net Gasoline Consumption	**64,408.5**
Net Diesel Fuel Consumption	**90,090.5**

Source: Air Quality, Health Risk, Greenhouse Gas, Energy Impact Report (Appendix A)

As shown in Table E-2, the estimated net increase in electricity demand associated with the operation of the proposed Project is 676,878 kilowatt-hours (kWh) per year while the estimated net increase in natural gas

demand associated with the proposed Project would be 16,821 therms per year. In 2020, total electricity demand in San Bernardino County was approximately 15,968.5 GWh (15,968,500,000 kWh) while total natural gas consumption was approximately 527,236,428 million therms. Therefore, operation of the proposed project would negligibly increase the annual electricity and natural consumption in San Bernardino County by less than 0.01 percent, respectively. Electrical and natural gas demand associated with project operations would not be considered inefficient, wasteful, or unnecessary in comparison to other similar developments in the region.

Also as shown in Table E-2, the net increase in fuel use associated with the vehicle trips generated by the proposed Project would be 64,408.5 gallons of gasoline and 90,090.5 gallons of diesel fuel per year. This analysis conservatively assumes that all vehicle trips generated as a result of Project operation would be new to San Bernardino County. Based on fuel consumption obtained from EMFAC2021, approximately 321.6 million gallons of diesel and approximately 917.9 million gallons of gasoline will be consumed from vehicle trips in San Bernardino County in 2022. Therefore, vehicle and truck trips associated with the proposed Project would increase the annual fuel use in San Bernardino County by approximately 0.02 percent for gasoline fuel usage and approximately 0.01 percent for diesel fuel usage. As such, fuel consumption associated with vehicle trips generated by Project operations would not be considered inefficient, wasteful, or unnecessary in comparison to other similar developments in the region.

Furthermore, the State of California provides a minimum standard for building design and construction standards through Title 24 of the California Code of Regulations (CCR). Compliance with Title 24 is mandatory at the time new building permits are issued by the City. The City's administration of the Title 24 requirements includes review of design components and energy conservation measures that occurs during the permitting process, which ensures that all requirements are met. Typical Title 24 measures include insulation; use of energy-efficient heating, ventilation and air conditioning equipment (HVAC); energy-efficient indoor and outdoor lighting systems; reclamation of heat rejection from refrigeration equipment to generate hot water; and incorporation of skylights, etc. In complying with the Title 24 standards, Project impacts related to peak energy usage periods would be minimized and impacts on statewide and regional energy needs would be reduced. Thus, operation of the Project would not use large amounts of energy or fuel in a wasteful manner, and no operational energy impacts would occur.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Impacts Associated with the Proposed Project

No New Impact. The California Title 24 Building Energy Efficiency Standards are designed to ensure new and existing buildings achieve energy efficiency and preserve outdoor and indoor environmental quality. These measures (Title 24, Part 6) are listed in the California Code of Regulations. The California Energy Commission is responsible for adopting, implementing and updating building energy efficiency. Local city and county enforcement agencies have the authority to verify compliance with applicable building codes, including energy efficiency. All development is required to comply with the adopted California Energy Code (Code of Regulations, Title 24 Part 6), which is ensured through the City's development permitting process included as RR GHG-1.

No new or substantially greater impacts would occur with implementation of the proposed Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

Conclusion

Based on the foregoing, none of the conditions identified in State CEQA Guidelines Section 15162 that would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts or mitigation measures exist regarding energy. There have not been 1) changes related to development of the Project site that involve new significant environmental effects or a substantial increase in the severity of previously identified effects; 2) substantial changes with respect to the circumstances under which development of the Project site is undertaken that require major revisions of TOP 2050 SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified effects; or 3) the availability of new information of substantial importance relating to significant effects or mitigation measures or alternatives that were not known and could not have been known when TOP 2050 SEIR was certified as completed.

Because none of the conditions identified in State CEQA Guidelines Section 15162 would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts, State CEQA Guidelines 15168 also does not require additional environmental review.

Regulatory Requirements (RRs)

RR GHG-1: Title 24 Standards. The Project shall be designed in accordance with the applicable Title 24 Energy Efficiency Standards for Residential and Nonresidential Buildings (California Code of Regulations [CCR], Title 24, Part 6). These standards are updated, nominally every three years, to incorporate improved energy efficiency technologies and methods. The Building Manager, or designee shall ensure compliance prior to the issuance of each building permit.

Project Design Features (PDFs)

None.

Mitigation/Monitoring Required

No new impacts nor substantially more severe energy impacts would result from implementation of the Project; therefore, no new or revised mitigation measures are required for energy.

5.7 GEOLOGY AND SOILS	Subsequent or Supplemental EIR			Addendum to EIR

This section is based on the Geotechnical Investigation prepared by NOVA Services, Inc in May 2022 (NOVA 2022) and included as Appendix E and the Paleontological Assessment for the 627 Bon View Project, prepared by Brian F. Smith and Associates, in August 2022 (BFSA 2022b), and included as Appendix F.

Summary of Impacts Identified in TOP 2050 SEIR

TOP 2050 SEIR discussed impacts related to geological, soil and paleontological resources in Section 5.7. The City of Ontario is not within any Alquist-Priolo Earthquake Fault Zone. According to TOP 2050 SEIR, based on the groundwater levels throughout the City being greater than 50 feet below ground surface, there is currently no potential for liquefaction. Ontario is underlain by young, unconsolidated alluvial deposits and artificial fill that may be susceptible to seismically induced settlement. TOP 2050 SEIR found that impacts

related to ground shaking, liquefaction, and seismic settlement would be less than significant with compliance with the CBC and with implementation of TOP 2050 seismic related policies.

TOP 2050 SEIR found that impacts related to soil erosion, ground subsidence, compressible and expansive soils would be less than significant with compliance with the CBC and review of grading plans for individual projects by the City Engineer.

TOP 2050 SEIR identified that use of septic tanks would be limited to existing septic tanks, and new septic tanks would be constricted to areas not in practical proximity to existing sewer mains, dependent on approval by the Santa Ana Regional Water Quality Control Board on a case-by-case basis.

TOP 2050 SEIR found that impacts related to paleontological resources would be less than significant with implementation of Mitigation Measure 5-2 which requires that in the event of an unanticipated discovery of archaeological or paleontological resources during grading and excavation of the site, a qualified archaeologist would assess the find and develop a course of action to preserve the find.

TOP 2050 SEIR Mitigation Measures:

Mitigation Measure 5-2: In areas of documented or inferred archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements:

a. Archaeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities.
b. Should any cultural resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources.
c. Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including a catalog with museum numbers.

a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:

i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR concluded that implementation of TOP 2050 policies and state regulations would ensure that the potential impacts from seismic-related hazards would be less than significant.

A Geotechnical Investigation was conducted by NOVA Services, Inc. for the Project site (see Appendix D). As described in the Geotechnical Investigation, the Project site is not within an Alquist-Priolo Earthquake Fault Zone. The closest known active fault zones are the Cucamonga section of the Sierra Madre Fault Zone, located approximately 6.4 miles north of the site and the Chino section of the Elsinore Fault Zone, located approximately 7.0 miles southwest of the site (NOVA 2022). As the Project site does not contain an earthquake fault, it is not affected by a state-designated Alquist-Priolo Earthquake Fault Zone. Thus, impacts would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

ii. Strong seismic ground shaking?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR concluded that implementation of TOP 2050 policies and state regulations would ensure that the potential impacts from seismic-related hazards would be less than significant.

Because the closest earthquake fault zones are the Cucamonga section of the Sierra Madre Fault Zone, located approximately 6.4 miles away and the Chino section of the Elsinore Fault Zone, located approximately 7.0 miles away, moderate to strong ground shaking can be expected at the site. The amount of motion can vary depending upon the distance to the fault, the magnitude of the earthquake, and the local geology. Greater movement can be expected at sites located closer to an earthquake epicenter, in areas that consist of poorly consolidated material such as alluvium, and in response to an earthquake of great magnitude.

Structures built in the City are required to be built in compliance with the California Building Code (CBC [California Code of Regulations, Title 24, Part 2]), included in Ontario Municipal Code as Section 8-1.01 (RR GEO-1). Compliance with the CBC would ensure earthquake safety based on factors including occupancy type, the types of soils onsite, and the probable strength of the ground motion. Compliance with the CBC would include the incorporation of 1) seismic safety features to minimize the potential for significant effects as a result of earthquakes; 2) proper building footings and foundations; and 3) construction of the building structures so that it would withstand the effects of strong ground shaking. Therefore, with CBC compliance, the proposed Project would not expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving strong seismic ground shaking more than other developments in Southern California.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

iii. Seismic-related ground failure, including liquefaction?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR concluded that impacts related to liquefaction would be less than significant with compliance with the CBC.

Soils that are most susceptible to liquefaction are clean, loose, saturated, and uniformly graded fine-grained sands that lie below the groundwater table within approximately 50 feet below ground surface. Lateral spreading is a form of seismic ground failure due to liquefaction in a subsurface layer.

As described in the in the Geotechnical Investigation, the existing soils at the Project site consist of Young alluvial fan deposits primarily comprised of loose to dense, slightly moist sand, gravel, and cobbles. Additionally, as described in the Geotechnical Investigation, no groundwater was encountered at the maximum explored depth of approximately 50 feet below ground surface. Due to the lack of shallow groundwater and given the dense nature of the materials beneath the site, the potential for liquefaction and dynamic settlement to occur is considered low (NOVA 2022).

The Project would be required to comply with the CBC, as included in the City's Municipal Code. Additionally, as required by Municipal Code and the CBC, the Project must demonstrate compliance with the Project-

specific geotechnical report, including geotechnical recommendations for the proposed Project prior to the issuance of grading permits. Compliance with the CBC and the City's Municipal Code would reduce impacts related to liquefaction.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

iv. Landslides?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR concluded that implementation of TOP 2050 policies and state regulations would ensure that the potential impacts from seismic-related hazards would be less than significant.

As described in the Geotechnical Investigation, the Project site is relatively level with elevations ranging from 940 feet above mean sea level (msl) to 940 feet above msl (NOVA 2022). During the field investigation no evidence of landslides, deep-seated landslides, or slope instabilities were not observed (NOVA 2022). Additionally, there are no mapped landslides in the vicinity of the Project site. Therefore, due to the flat topography of the site, there is no potential for landslides or slope instabilities to occur at the site.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

b) Result in soil erosion or the loss of topsoil?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR found that impacts related to soil erosion would be less than significant with compliance with the CBC and review of grading plans for individual projects by the City Engineer.

The Project would involve excavation, grading, and construction activities that would disturb soil and leave exposed soil on the ground surface. As such, the proposed Project would be required to comply with the City's grading standards and erosion control measures, as verified through the permitting and plan check process. Additionally, the Construction General Permit (CGP; Order No. R8-2002-0011) issued by the State Water Resources Control Board (SWRCB), regulates construction activities to minimize water pollution, including sediment. The proposed Project would be subject to the National Pollutant Discharge Elimination System (NPDES) permitting regulations, including implementation of a Stormwater Pollution Prevention Plan (SWPPP), and associated best management practices (BMPs) during grading and construction, which would be required during construction permitting of the Project.

Adherence to the BMPs in the SWPPP would reduce, prevent, or minimize soil erosion from Project-related grading and construction activities. After completion of construction, the Project site would be developed with two warehouses, parking lots, and landscape improvements, and would not contain exposed soil. Thus, the potential for soil erosion or the loss of topsoil would be low. In addition, the City of Ontario requires new development projects to prepare a Water Quality Management Plan (WQMP) including Low Impact Development BMPs to reduce the potential of erosion and/or sedimentation through site design and structural treatment control street sweeping private streets and parking lots, storm drain signage, and use of efficient irrigation systems and landscape design. Implementation of the WQMP and BMPs is verified through the City's permitting process. Therefore, the proposed Project would have a less than significant impact related to soil erosion.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or offsite landslide, lateral spreading, subsidence, liquefaction or collapse?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR found that impacts related to unstable geologic units and soil would be less than significant with compliance with the CBC and review of grading plans for individual projects by the City Engineer.

As described above, the Project site is relatively flat, and does not contain nor is adjacent to any significant slope or hillside area. Furthermore, the Project itself would not create slopes on the site. Thus, on or off-site landslides would not occur from implementation of the Project.

The Project site is not located on geologic unit or soil that is unstable, or that would become unstable as a result of the Project, and potentially result in on- or offsite landslide, lateral spreading, subsidence, or collapse (NOVA 2022). Additionally, the Project site is not within a liquefaction hazard area. Prior to issuance of grading permits, pursuant to the CBC, the Project must comply with the geotechnical report and its recommendations (see RR GEO-2). The report would provide CBC regulations for the proposed development to reduce the potential for liquefaction-induced settlement to a less than significant level and would be verified by the City through the building plan check and development permitting process, and would reduce potential impacts related to liquefaction, settlement, and ground collapse to a less than significant level.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

d) Be located on expansive soil, as defined in in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR found that impacts related to expansive soils would be less than significant with compliance with the CBC and review of grading plans for individual projects by the City Engineer.

Expansive soils contain certain types of clay minerals that shrink or well as the moisture content changes; the shrinking or swelling can shift, crack, or break structures built on such soils. Arid or semiarid areas with seasonal changes of soil moisture experiences, such as southern California, have a higher potential of expansive soils than areas with higher rainfall and more constant soil moisture.

Onsite soils testing indicate that Project site soils have an expansion index of 10, which is classified as a very low expansion potential. According to the Geotechnical Investigation, in order to reduce the potential for expansion, the top two feet of material beneath building footings, concrete slabs-on-grade, hardscape, and site and retaining wall footings should have an expansion index of 50 or less. The Geotechnical Investigation indicated that the onsite silty sand would meet the expansion index criteria (NOVA 2022).

In addition, as described previously, compliance with the CBC would be incorporated into grading plans and building specifications as a condition of construction permit approval to ensure that Project structures would

withstand the effects related to ground movement, including expansive soils. Therefore, impacts would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR identified that use of septic tanks would be limited to existing septic tanks, and new septic tanks would be constricted to areas not in practical proximity to existing sewer mains, dependent on approval by the Santa Ana Regional Water Quality Control Board on a case-by-case basis.

The proposed Project would connect to existing sewer lines within Bon View Avenue and California Street. No septic tanks are proposed. Therefore, no impact would occur.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR found that impacts related to paleontological resources would be less than significant with implementation of Mitigation Measure 5-2 which requires that in the event of an unanticipated discovery of archaeological or paleontological resources during grading and excavation of the site, a qualified archaeologist would assess the find and develop a course of action to preserve the find.

A paleontological literature review and collections and records search was conducted for the proposed Project through the Division of Geological Sciences at the San Bernardino County Museum (SBCM), the Los Angeles County Museum of Natural History (LACM), the Western Science Center (WSC), and with data from published and unpublished paleontological literature (Appendix F). Geologic mapping shows that the Project site lies in Holocene young alluvial fan sediments underlain by late Pleistocene alluvial fan deposits. The paleontological sensitivity of late Pleistocene alluvial sediments is considered high.

Record search results indicated that the LACM has no known fossil localities within the Project boundaries or vicinity. However, records from the SBCM indicate the closest-known fossil locality is located approximately five miles east of the project along Champagne Avenue, consisting of the remains of a mammoth from a depth of about 20 feet below the surface (BFSA 2022b). Additionally, the WSC records identified a locality approximately five miles to the south, near Merrill Avenue, yielding sparse mammalian remains that include a large bovid-like artiodactyl (even-toed grazer), from about five to seven feet deep (BFSA 2022b).

The Project would demolish the existing buildings onsite and construct two new tilt-up warehouse buildings on the site. Earthmoving activities, including grading and trenching activities, would have the potential to disturb previously unknown paleontological resources if earthmoving activities occur at significant depths below previously disturbed soils. Based on the high paleontological sensitivity of the late Pleistocene alluvial fan deposits mapped at the Project site, and nearby fossil localities, earth disturbance activities have the potential to impact significant paleontological resources. As specified in TOP 2050 SEIR Mitigation Measure

5-2, in areas of documented or inferred archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. Further, on properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. In compliance with Mitigation Measure 5-2, the Project Applicant/Developer would be required to follow the recommendations included in the Paleontological Assessment prepared for the proposed Project. With implementation TOP 2050 SEIR Mitigation Measure 5-2, potential impacts to paleontological resources and unique geologic features would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

Conclusion

Based on the foregoing, none of the conditions identified in State CEQA Guidelines Section 15162 that would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts or mitigation measures exist regarding geology and soils. There have not been 1) changes to the project that require major revisions of TOP 2050 SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified effects; 2) substantial changes with respect to the circumstances under which the project is undertaken that require major revisions of TOP 2050 SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified effects; or 3) the availability of new information of substantial importance relating to significant effects or mitigation measures or alternatives that were not known and could not have been known when TOP 2050 SEIR was certified as completed.

Because none of the conditions identified in State CEQA Guidelines Section 15162 would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts, State CEQA Guidelines 15168 also does not require additional environmental review.

Regulatory Requirements (RRs)

RR GEO-1: California Building Code. Site development in the City is required to comply with the CBC and all state requirements pertaining to geotechnical hazards and constraints, including soil conditions. The CBC has been incorporated and adopted in its entirety into the City's Building Code as Title 8, Chapter 1, Section 8-1.01 of the Ontario Municipal Code.

RR GEO-2 As required by the current CBC adopted in the City's Municipal Code, prior to issuance of a grading permit, site preparation shall follow the recommendations in the *Geotechnical Investigation for Proposed Industrial Development Bon View Avenue and California Street, Ontario, California* (dated May 16, 2022), prepared by NOVA Services, Inc., as well as any additional future site-specific, design-level geotechnical investigations of the Project.

Project Design Features (PDFs)

None.

Mitigation/Monitoring Required

No new impacts nor substantially more severe geology and soils impacts would result from implementation of the Project; therefore, no new mitigation measures are required for geology and soils.

TOP 2050 SEIR Mitigation Measures Applicable to the Project:

Mitigation Measure 5-2: In areas of documented or inferred archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements:

a. Archaeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities.
b. Should any cultural resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources.
c. Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including a catalog with museum numbers.

Status: Satisfied through the preparation of the Paleontological Resources Assessment prepared by Brian F. Smith and Associates in August 2022. In compliance with the requirements of TOP 2050 SEIR Mitigation Measure 5-2, Project grading and construction activities shall follow the recommendations in the Paleontological Assessment.

5.8 GREENHOUSE GAS EMISSIONS	Subsequent or Supplemental EIR			Addendum to EIR	
	Substantial Change in Project or Circumstances Resulting in New Significant Effects	New Information Showing Greater Significant Effects than Previous EIR	New Information Identifying New Mitigation or Alternative to Reduce Significant Effect is Declined	Minor Technical Changes or Additions	No New Impact/ No Impact
Would the project:					
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☐	☐	☒
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☐	☐	☒

The discussion below is based on the Air Quality, Health Risk, Greenhouse Gas, and Energy Impact Report, prepared by LSA, dated November 2022, which is included as Appendix A.

Summary of Impacts Identified in TOP 2050 SEIR

TOP 2050 SEIR evaluated impacts related to generation of greenhouse gas emissions (GHG) in Section 5.8. TOP 2050 SEIR determined that implementation of the Community Climate Action Plan (CCAP), the City would achieve the Executive Order (EO) S-03-05 GHG emissions reduction targets, resulting in an 80 percent decrease in GHG emissions in the City by 2050 from existing conditions, and would make substantial progress toward the State's carbon neutrality goals under EO B-55-18. Therefore, TOP 2050 SEIR determined that TOP 2050, which includes the CCAP, would reduce GHG emissions impacts compared to the previous TOP. As such, impacts were determined to be less than significant.

TOP 2050 SEIR Mitigation Measures:

None.

Impacts Associated with the Proposed Project

Explanation

Constituent gases of the Earth's atmosphere, called atmospheric greenhouse gases (GHGs), play a critical role in the Earth's radiation amount by trapping infrared radiation from the Earth's surface, which otherwise would have escaped to space. Prominent greenhouse gases contributing to this process include carbon dioxide (CO_2), methane (CH_4), ozone (O_3), water vapor, nitrous oxide (N_2O), and chlorofluorocarbons (CFCs). This phenomenon, known as the Greenhouse Effect, is responsible for maintaining a habitable climate. Anthropogenic (caused or produced by humans) emissions of these greenhouse gases in excess of natural ambient concentrations are responsible for the enhancement of the Greenhouse Effect and have led to a trend of unnatural warming of the Earth's natural climate, known as global warming or climate change. Emissions of gases that induce global warming are attributable to human activities associated with industrial/manufacturing, agriculture, utilities, transportation, and residential land uses.

Section 15364.5 of the California Code of Regulations defines GHGs to include carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons and sulfur hexafluoride. Transportation is responsible for 37 percent of the state's greenhouse gas emissions, followed by electricity generation. Emissions of CO_2 and N_2O are byproducts of fossil fuel combustion. Methane, a potent greenhouse gas, results from off-

gassing associated with agricultural practices and landfills. Sinks of CO_2, where CO_2 is stored outside of the atmosphere, include uptake by vegetation and dissolution into the ocean.

California has passed several bills and the Governor has signed at least three executive orders regarding greenhouse gases. GHG statues and EO's include AB 32, SB 1368, EO S-03-05, EO S-20-06 and EO S-01-07. These regulations require the use of alternative energy, such as solar power. Solar projects produce electricity with no GHG emissions and assist in offsetting GHG emissions produced by fossil-fuel-fired power plants.

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Impacts Associated with the Proposed Project

No New Impact. Global climate change (GCC) describes alterations in weather features (e.g., temperature, wind patterns, precipitation, and storms) that occur across the Earth as a whole. GCC is not confined to a particular project area and is generally accepted as the consequence of global industrialization over the last 200 years. A typical project, even a very large one, does not generate enough GHG emissions on its own to influence global climate change significantly; hence, the issue of global climate change is, by definition, a cumulative environmental impact.

The principal GHGs of concern contributing to the greenhouse effect are CO2, CH4, N2O, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride. GHGs are produced by both direct and indirect emissions sources. Direct emissions include consumption of natural gas, heating and cooling of buildings, landscaping activities and other equipment used directly by land uses. Indirect emissions include the consumption of fossil fuels for vehicle trips, electricity generation, water usage, and solid waste disposal. The large majority of GHG emissions generated from residential projects are related to vehicle trips.

In 2022, the City updated its Community Climate Action Plan (CCAP), which outlines a plan to achieve the City's long term GHG reduction targets under Senate Bill 32, Executive Order S-03-05 for year 2050, and substantial progress towards the State's carbon neutrality goals under Executive Order B-55-18. The CCAP will also include GHG emissions CEQA thresholds and screening tables, which will be used for future projects to determine their consistency with the CCAP. However, GHG CEQA thresholds and screening tables are not available yet. Therefore, the analysis herein evaluates the proposed Project based on SCAQMD thresholds.

The SCAQMD has proposed interim numeric GHG significance thresholds that are based on capture of approximately 90 percent of emissions from development, which is 3,000 metric tons carbon dioxide equivalent (MTCO2e) per year (SCAQMD 2008). This approach is widely used by cities in the South Coast Air Basin, including the City of Ontario. As such, this threshold is utilized herein to determine if GHG emissions from this Project would be significant.

Similar to TOP 2050, during demolition and construction, temporary sources of GHG emissions include construction equipment and workers' commutes to and from the site. The combustion of fossil-based fuels creates GHGs such as CO_2, CH_4, and N_2O. As shown on Table GHG-1, the proposed Project has the potential to generate a total of approximately 27.2 MTCO2e per year from construction emissions amortized over 30 years per SCAQMD methodology. Construction emissions would be temporary in nature and would only occur for the duration of the construction period.

Table GHG-1: Project Construction GHG Emissions

Construction Year	Annual Emissions (MT/yr)			
	CO_2	CH_4	N_2O	CO_2e
2023	307.5	0.1	<0.1	312.0
2024	495.7	0.1	<0.1	502.7

Total Construction GHG Emissions	**814.7**
Amortized Construction Emissions	**27.2**

Source: Air Quality, Health Risk, Greenhouse Gas and Energy Impact Analysis (Appendix A)

Similar to TOP 2050, during operations, the proposed warehouses would generate long-term GHG emissions from mobile sources (e.g., vehicle trips), area sources (e.g., maintenance activities and landscaping), indirect emissions from sources associated with energy consumption, waste sources (land filling and waste disposal), and water sources (water supply and conveyance, treatment, and distribution). Natural gas use results in the emission of two GHGs: CH_4 (the major component of natural gas) and CO_2 (from the combustion of natural gas). Electricity use can result in GHG production if the electricity is generated by combusting fossil fuel.

Table GHG-2 conservatively shows the operational GHG emissions that would result from the operation of the proposed warehouses compared to the operation of the existing 77,696 SF of RV and boat storage uses. The large majority of GHG emissions generated from operation of the warehouses would be from vehicle trips.

Table GHG-2: Project Operational GHG Emissions

Emissions Source	Operational Emissions				
	CO_2	**CH_4**	**N_2O**	**CO_2e**	**Percentage of Total**
Existing Operational Emissions					
Area Sources	<0.1	<0.1	0.0	<0.1	<1
Energy Sources	54.2	<0.1	<0.1	54.5	30
Mobile Sources	22.4	<0.1	<0.1	22.8	13
Waste Sources	14.8	0.9	0.0	36.7	20
Water Sources	47.2	0.6	<0.1	66.2	37
Total Existing Emissions				**180.2**	**100**
Proposed Project Operational Emissions					
Area Sources	<0.1	<0.1	0.0	<0.1	<1
Energy Sources	264.0	<0.1	<0.1	265.4	13
Mobile Sources	1,401.8	0.1	0.2	1,448.6	71
Waste Sources	48.3	2.9	0.0	119.7	6
Water Sources	148.2	1.8	<0.1	206.4	10
Total Project Operational Emissions				**2,040.1**	**100**
Amortized Construction Emissions				27.2	-
Total Annual Emissions				**2,067.3**	**-**
Net Operational Emissions				**1,887.1**	**-**
SCAQMD Threshold				3,000	-
Exceed?				**No**	**-**

Source: Air Quality, Health Risk, Greenhouse Gas and Energy Impact Analysis (Appendix A)

As shown in Table GHG-2, operation of the proposed Project would result in approximately 1,887.1 MTCO2e of operational-related GHG emissions per year which is less than the threshold of 3,000 MTCO2e per year. Although GHG emissions were not analyzed under the previous TOP 2050 SEIR, emissions generated by the 240,778 SF industrial project assumed in TOP 2050 SEIR would be similar to that of the proposed Project and would be less than significant based on SCAQMD thresholds.

No new or substantially greater impacts would occur with implementation of the proposed Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Impacts Associated with the Proposed Project

No New Impact.

The Project would not conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases. As described in the previous response, the Project would not exceed thresholds related to GHG emissions. In addition, the Project would comply with regulations imposed by the state and the SCAQMD that reduce GHG emissions, as described below:

- Global Warming Solutions Act of 2006 (AB 32) is applicable to the Project because many of the GHG reduction measures outlined in AB 32 (e.g., low carbon fuel standard, advanced clean car standards, and cap-and-trade) have been adopted over the last 5 years and implementation activities are ongoing. The proposed building would not conflict with fuel and car standards or cap-and-trade.
- Pavley Fuel Efficiency Standards (AB 1493) establishes fuel efficiency ratings for new (model year 2009-2016) passenger cars and light trucks. The Project would develop new residences that would not conflict with fuel efficiency standards for vehicles.
- Title 24 California Code of Regulations (Title 24) establishes energy efficiency requirements for new construction that address the energy efficiency of new (and altered) buildings. The Project is required to comply with Title 24, which would be verified by the City during the plan check and permitting process.
- Title 17 California Code of Regulations (Low Carbon Fuel Standard [LCFS]) requires carbon content of fuel sold in California to be 10 percent less by 2020. Because the LCFS applies to any transportation fuel that is sold or supplied in California, all vehicle trips generated by the Project would comply with LCFS.
- California Water Conservation in Landscaping Act of 2006 (AB 1881) provides requirements to ensure water efficient landscapes in new development and reduced water waste in existing landscapes. The Project is required to comply with AB 1881 landscaping requirements, which would be verified by the City during the plan check and permitting process.
- Emissions from vehicles, which are a main source of operational GHG emissions, would be reduced through implementation of federal and state fuel and air quality emissions requirements that are implemented by CARB. In addition, as described in the previous response, the Project would not result in an exceedance of an air quality standard.

The regulations, plans, and polices adopted for the purpose of reducing GHG emissions that are directly applicable to the Project include the latest Title 24 Energy Efficiency Standards for Residential and Nonresidential Buildings (RR GHG-1) and the Title 24 California Green Building Standards Code (CALGreen) (RR GHG-2). The Project would be required to comply with the latest Title 24 Standard at the time of building permit issuance.

City of Ontario Community Climate Action Plan
The City has recently adopted the 2022 CCAP, which is an update to the 2014 CCAP. The 2022 CCAP provides strategies in various sectors to meet or exceed the State targets of reducing emissions 40 percent below 1990 levels by 2030 and 80 percent below 1990 levels by 2050. The 2022 CCAP will include GHG emission CEQA thresholds and screening tables which will be used for future projects to determine their consistency with the CCAP. However, GHG CEQA thresholds and screening tables are not available yet, thus the proposed Project was analyzed based on the SCAQMD thresholds and for consistency with the CCAP

GHG reduction strategies that are applicable to the proposed Project. The proposed Project would implement energy and water conservation measures consistent with the CALGreen Code and the 2022 CCAP. In addition, the proposed Project would include approximately 62,100 SF of ornamental landscape area, consistent with the goal of the CCAP to include new trees in parking lot areas. Additionally, future tenants of the buildings would be able to implement mass transit measures such as ridership programs and public transit passes to comply with the goals of the CCAP. Therefore, the proposed Project would not lead to new or more severe impacts beyond those identified in TOP 2050 SEIR.

San Bernardino County Regional Greenhouse Gas Reduction Plan
The City of Ontario was a participant in the San Bernardino County Regional Greenhouse Gas Reduction Plan, which identifies the County's vision and goals in reducing GHG emissions in its different cities, local government facilities, and communities. Table GHG-3 below presents the proposed project's compliance with each reduction measure evaluated for the City of Ontario, as identified in the San Bernardino County Regional Greenhouse Gas Reduction Plan.

Table GHG-3: Project Consistency with City of Ontario GHG Reduction Measures

Measure	Description	Project Consistency
Building Energy		
Energy-1. Building Energy	• **Environmental Resources 3-1:** We require conservation as the first strategy to be employed to meet applicable energy-saving standards. • **Environmental Resources 3-3:** We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar and natural ventilation. • **Environmental Resources 3-4:** We require all new and substantially renovated City buildings in excess of 10,000 square feet achieve a LEED Silver Certification standard, as determined by the U.S. Green Building Council	***Consistent.*** The proposed Project would comply with the CALGreen Code regarding energy conservation and green building standards.
Energy-4. Solar Installation for New Housing	• **Environmental Resources 3-3:** We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar and natural ventilation. • **Environmental Resources 3-6:** We promote the use of renewable energy sources to serve public and private sector development.	***Not Applicable.*** This measure is not applicable as the proposed Project would not construct a residential building.
Energy-5. Renewable Energy – New Commercial/Industrial	• **Environmental Resources 3-3:** We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar and natural ventilation. • **Environmental Resources 3-6:** We promote the use of renewable energy sources to serve public and private sector development.	***Consistent.*** The proposed Project would comply with the CALGreen Code regarding energy conservation and green building standards.
Energy-6. Solar Energy for Warehouse Space	**Environmental Resources 3-6**: We promote the use of renewable energy sources to serve public and private sector development.	***Consistent.*** The proposed project would comply with the CALGreen Code regarding energy

		conservation and green building standards.
Energy-7. Solar Installation - Existing Housing	**Environmental Resources 3-6:** We promote the use of renewable energy sources to serve public and private sector development.	***Not Applicable.*** This measure is not applicable as the proposed project would not retrofit an existing residential building.
Energy-8. Renewable Energy – Existing Commercial/Industrial	**Environmental Resources 3-6:** We promote the use of renewable energy sources to serve public and private sector development.	***Not Applicable.*** This measure is not applicable as the proposed Project would not retrofit an existing building.
Energy-10. Urban Tree Planting for Shading and Energy Savings	**Environmental Resources 4-8:** We protect healthy trees within the City and plant new trees to increase carbon sequestration and help the regional/local air quality.	***Consistent.*** The proposed Project would include landscaping.
On-Road		
On Road-1: Alternative Fueled Transit Fleets – CNG to Electric	• **Mobility 3-3:** We require walkways that promote safe and convenient travel between residential areas, businesses, schools, parks, recreation areas, and other key destination points. • **Environmental Resources 3-2:** We require the use of best practices identified in green community rating systems to guide the planning and development of all new communities. • **Environmental Resources 4-1:** We reduce GHG and other local pollutant emissions through compact, mixed use, and transit-oriented development and development that improves the regional jobs-housing balance.	***Not Applicable.*** The proposed Project would include two speculative warehouse buildings. Future tenants of the buildings would implement mass transit encouragement measures as applicable.
OnRoad-2. Encourage Use of Mass Transit	• **Mobility 3-4:** We work with regional transit agencies to implement BRT service to target destinations and along corridors, as shown in the Transit Plan. • **Mobility 3-1:** We maintain a proactive working partnership with transit providers to ensure that adequate public transit service is available. • **Mobility 3-2:** We require new development to provide transit facilities, such as bus shelters, transit bays and turnouts, as necessary. • **Mobility 3-5**: We support extension of the Metro Rail Gold Line to Ontario. • **Mobility 3-6:** We advocate expansion of Metrolink service to include the Downtown and the multimodal transit center. • **Mobility 3-8:** We work with regional transit agencies to secure convenient feeder service from the Metrolink station and the proposed multimodal transit center to employment centers in Ontario. • **Mobility 3-11**: We require the future development of community-wide serving facilities to be sited in transit-ready areas that can be served and made accessible by public transit.	***Not Applicable.*** The proposed Project would construct two warehouse buildings and would not include transit fleet vehicles.

	• **Land Use 1-2**: We integrate state, regional and local Sustainable Community/Smart Growth principles into the development and entitlement process.	
OnRoad-3. Transportation Demand Management and Signal Synchronization	• **Policy LU-3.3**: Locate regionally serving land uses with immediate access to the regional transportation network that is designed to provide maximum access capabilities and permit maximum dispersal of traffic.	***Not Applicable.*** The proposed Project would generate a total of 65 average daily trips, including XX AM peak hour trips and 66 PM peak hour trips. Based on the minimal peak hour trips generated by the proposed Project, the Project would not be required to implement transportation demand management strategies or signal synchronization.
OnRoad-4. Expand Bike Routes	• **Land Use 1-4:** We require development and urban design, where appropriate, that reduces reliance on the automobile and capitalizes on multi-modal transportation opportunities. • **Mobility 3-1:** We maintain our Multipurpose Trails & Bikeway Corridor Plan to create a comprehensive system of on- and off-street bikeways that connect residential areas, businesses, schools, parks, and other key destination points. • **Mobility 3-2:** We provide off-street multipurpose trails and Class II bikeways as our primary paths of travel and use the Class III for connectivity in constrained circumstances. • **Mobility 3-4:** We explore opportunities to expand the pedestrian and bicycle networks.	***Not Applicable.*** The proposed Project would include two speculative warehouse buildings. Future tenants of the buildings would implement mass transit encouragement measures as applicable.
Solid Waste Management		
Waste-2. Waste Diversion	• **Environmental Resources 3-1:** We shall meet or exceed AB 939 requirements.	***Consistent.*** The proposed Project would be consistent with County Solid Waste and State requirements for waste reduction.
Water Conveyance		
Water-1: Require Adoption of the Voluntary CALGreen Water Efficiency Measures for New Construction	Require adoption of the Voluntary CALGreen water efficiency measures for new construction. CALGreen voluntary measures recommend use of certain water efficient appliances, and plumbing and irrigation systems, as well as more aggressive water savings targets. Update building standards and codes for new buildings to require adoption of these voluntary measures, including: • Use of low-water irrigation systems. • Installation of rainwater and graywater systems. • Installation of water-efficient appliances and plumbing fixtures, as well as composting toilets.	***Consistent.*** The proposed Project would comply with CALGreen, regarding water conservation.

	• A 30-40% reduction over BAU conditions in indoor water use, and a 55-60% reduction in outdoor potable water use (CALGreen Tier 1 or 2).	
Water-3: Encourage Water-Efficient Landscaping Practices	Encourage Water-Efficient Landscaping Practices. Adopt a landscaping water conservation plan that exceeds the requirements in the Model Landscape Ordinance (AB 1881).	***Consistent.*** The proposed Project would comply with CALGreen, regarding water conservation.

Source: Air Quality, Health Risk, Greenhouse Gas, and Energy Impact Report (Appendix A)

2020-2056 RTP/SCS

SCAG's RTP/SCS determines that land use strategies that focus on new housing and job growth in areas served by high quality transit and other opportunity areas would be consistent with a land use development pattern that supports and complements the proposed transportation network. The core vision in the 2020–2045 RTP/SCS is to better manage the existing transportation system through design management strategies, integrate land use decisions and technological advancements, create complete streets that are safe to all roadway users, preserve the transportation system, and expand transit and foster development in transit-oriented communities. The 2020–2045 RTP/SCS does not require that local general plans, specific plans, or zoning be consistent with the 2020–2045 RTP/SCS but provides incentives for consistency for governments and developers.

Implementing SCAG's RTP/SCS will greatly reduce the regional GHG emissions from transportation, helping to achieve statewide emissions reduction targets. As discussed above, the proposed Project would result in fewer daily trips than what was assumed for the Project site in TOP 2050 SEIR and would in no way conflict with the stated goals of the RTP/SCS; therefore, the proposed Project would not interfere with SCAG's ability to achieve the region's GHG reduction target of 19 percent below 2005 per capita emissions levels by 2035. Furthermore, the proposed Project is not regionally significant per State CEQA Guidelines Section 15206 and as such, it would not conflict with the SCAG RTP/SCS targets, since those targets were established and are applicable on a regional level.

As described above, the Project is consistent with the goals and strategies set by the CCAP, San Bernardino County Regional GHG Reduction Plan, and the 2020-2045 RTP/SCS. In addition, emissions would not exceed the thresholds set by SCAQMD. Therefore, implementation of the Project would not conflict with any applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases and impacts would be less than significant.

No new or substantially greater impacts would occur with implementation of the proposed Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

Conclusion

Based on the foregoing, none of the conditions identified in State CEQA Guidelines Section 15162 that would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts or mitigation measures exist regarding greenhouse gas emissions. There have not been 1) changes related to development of the Project site that involve new significant environmental effects or a substantial increase in the severity of previously identified effects; 2) substantial changes with respect to the circumstances under which development of the Project site is undertaken that require major revisions of TOP 2050 SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified effects; or 3) the availability of new information of substantial importance relating to significant effects or mitigation measures or alternatives that were not known and could not have been known when TOP 2050 SEIR was certified as completed.

Because none of the conditions identified in State CEQA Guidelines Section 15162 would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts, State CEQA Guidelines 15168 also does not require additional environmental review.

Regulatory Requirements (RRs)

RR GHG-1: Title 24 Standards. The Project shall be designed in accordance with the applicable Title 24 Energy Efficiency Standards for Residential and Nonresidential Buildings (California Code of Regulations [CCR], Title 24, Part 6). These standards are updated, nominally every three years, to incorporate improved energy efficiency technologies and methods. The Building Manager, or designee shall ensure compliance prior to the issuance of each building permit.

RR GHG-2: CALGreen Standards. Projects shall be designed in accordance with the applicable California Green Building Standards (CALGreen) Code (24 CCR 11). The Building Manager, or designee shall ensure compliance prior to the issuance of each building permit.

Project Design Features (PDFs)

None.

Mitigation/Monitoring Required

No new impacts nor substantially more severe greenhouse gas emissions impacts would result from implementation of the proposed Project; therefore, no new or revised mitigation measures with respect to greenhouse gas emissions impacts are required.

This section is based on the Phase I Environmental Site Assessment conducted by Stantec Consulting Services Inc. in December 2021, (Stantec 2021) and included as Appendix G and the Limited Subsurface Soil Vapor Screening Assessment conducted by Stantec Consulting Services Inc. (Stantec 2022a) in February 2022, (Stantec 2022) and included as Appendix H.

Summary of Impacts Identified in TOP 2050 SEIR

TOP 2050 SEIR analyzed impacts related to hazards and hazardous materials in Section 5.9. TOP 2050 SEIR determined that impacts related to hazardous waste transport, use, and/or disposal that would occur upon the buildout of TOP 2050 would be less than significant with adherence to the existing regulations. TOP 2050 SEIR also determined that with implementation of the policies in TOP in addition to existing regulations, buildout of TOP 2050 would not expose people to substantial hazards from hazardous materials sites listed on environmental databases. TOP 2050 SEIR determined that TOP 2050 would have a less than significant impact associated with consistency with the Ontario Airport Land Use Compatibility Plan (ONT ALUCP) and the Caltrans 2011 California Airport Land Use Planning Handbook for Chino Airport. TOP 2050 SEIR determined that buildout of TOP 2050 would not interfere with an emergency evacuation plan all

development applications are reviewed by the Ontario Fire Department to ensure that adequate emergency accessibility is provided based on local and state guidance. TOP 2050 SEIR found that TOP 2050 would result in less than significant risks from wildfire hazards as Ontario is outside of the state responsibility area, and CAL FIRE has determined that the City contains no areas subject to very high wildfire risk. Adherence to the CAL FIRE 2019 Strategic Fire Plan for California, the California Fire Code, County of San Bernardino Multi-jurisdiction Hazard Management Plan, the Ontario LHMP, and fire services from the Ontario Fire Department, TOP 2050 would not exacerbate risk or result in post-wildfire hazards (e.g., landslides, mudflows, and flooding).

TOP 2050 SEIR Mitigation Measures:

None.

Existing Condition

The Project site is currently developed with five light industrial buildings/warehouses, one office building and a paved parking and outdoor material storage yard. The site is being used a storage facility for cars, RVs, mobile homes, boats, trailers and trucks. As early as 1897 to 1903, the site was developed with a portion of a road. Between 1933 to 1947 the site was used fully as agricultural cropland. The first building was constructed on the site in 1947. The remainder of the existing buildings were constructed in 1956 (two buildings), 1959 (two buildings) and 2000 (one building). Past occupants of the Subject Property include ABC Windows Co. and Production Augers Inc., Bestile Manufacturing, AVR Express and Shamrock Paving (Stantec 2021).

The Phase I ESA identified the following recognized environmental concerns (RECs) relative to the Project site:

- The historical use of the site as an industrial facility from at least 1947 to the 2010s is considered a REC based on the likely use of hazardous materials at a time when such materials were not regulated.
- The unknown status of two solvent and one fuel oil underground storage tanks (USTs) on the site is considered a REC.
- The off-site Alger Manufacturing Co. located at 724 South Bon View Avenue, adjacent southwest, is considered a REC based on the identified tetrachloroethylene (PCE) and trichloroethylene (TCE) plume in both soil vapor and groundwater.

The Phase I ESA identified no evidence of Controlled RECs (CRECs) or historical RECs (HRECs) in connection with the Project site.

a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Impacts Associated with the Proposed Project

No New Impact. A hazardous material is defined as any material that, due to its quantity, concentration, or physical or chemical characteristics, poses a significant present or potential hazard to human health and safety or to the environment if released into the environment. Hazardous materials include, but are not limited to, hazardous substances, hazardous wastes, and any material that regulatory agencies have a reasonable basis for believing would be injurious to the health and safety of persons or harmful to the environment if released into the home, workplace, or environment. Hazardous wastes require special handling and disposal because of their potential to damage public health and the environment. TOP 2050 SEIR determined that impacts related to hazardous waste transport, use, and/or disposal that would occur upon the buildout of TOP 2050 would be less than significant with adherence to the existing regulations.

Construction

Construction activities for the proposed Project would involve routine transport, use, and disposal of hazardous materials such as paints, solvents, oils, grease, and calking. In addition, routine hazardous materials would be used for fueling and serving construction equipment onsite. These types of hazardous materials routinely used during construction are not acutely hazardous, and all storage, handling, use, and disposal of these materials are regulated by existing state and federal laws that the Project is required to strictly adhere to. As a result, the routine transport, use or disposal of hazardous materials during construction activities for the proposed Project would be less than significant.

Operation

The proposed Project would operate two warehouse buildings. Depending on the type of business occupying the warehouses, operations could require the use of various types and quantities of hazardous materials, including lubricants, solvents, cleaning agents, wastes, paints and related wastes, petroleum, wastewater, batteries, (lead acid, nickel cadmium, nickel, iron, carbonate), scrap metal, and used tires. These hazardous materials would be used, stored, and disposed of in accordance with applicable regulations and standards (such as CFR, Title 49, Chapter I; CCR, Title 8; CFR, Title 40, Part 263) that are enforced by the USEPA, USDOT, CalEPA, CalOSHA, DTSC, and County of San Bernardino Environmental Health Division.

Under California Health and Safety Code Section 25531 et seq., CalEPA requires businesses operating with a regulated substance that exceeds a specified threshold quantity to register with a managing local agency, known as the Certified Unified Program Agency (CUPA). Additionally, businesses are required to provide workers with training on the safe use, handling, and storage of hazardous materials. Businesses are also required to maintain equipment and supplies for containing and cleaning up spills of hazardous materials that can be safely contained and cleaned by onsite workers and to immediately notify emergency response agencies in the event of a hazardous materials release that cannot be safely contained and cleaned up by onsite personnel. Therefore, compliance with existing laws and regulations governing hazards and hazardous materials would result in less than significant impacts related the routine transport, use, and disposal of the hazardous materials.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Impacts Associated with the Proposed Project

No New Impact. In February 2022, Stantec completed a Phase I Environmental Assessment (Phase I ESA) for the proposed Project (Appendix F). The 2021 Phase I ESA identified the following Recognized Environmental Conditions (RECs) related to the Project site:

- The historical use of the site as an industrial facility from at least 1947 to the 2010s is considered a REC based on the likely use of hazardous materials at a time when such materials were not regulated.
- The unknown status of two solvent and one fuel oil underground storage tanks (USTs) on the site is considered a REC.
- The off-site Alger Manufacturing Co. located at 724 South Bon View Avenue, adjacent southwest, is considered a REC based on the identified tetrachloroethylene (PCE) and trichloroethylene (TCE) plume in both soil vapor and groundwater.

The Phase I ESA did not identify Controlled RECs, Historical RECs, De Minimis Conditions or Business Environmental Risks (BER) related to the Project site.

Construction

As described previously, construction of the Project would involve the limited use and disposal of hazardous materials. Equipment that would be used in construction of the project has the potential to release gas, oils, greases, solvents, and spills of paint and other finishing substances. However, the amount of hazardous materials onsite would be limited, and construction activities would be required to adhere to all applicable regulations regarding hazardous materials storage and handling, as well as to implement construction BMPs (through implementation of a required SWPPP implemented by City conditions of approval, and included as RR HYD-1) to prevent a hazardous materials release and to promptly contain and clean up any spills, which would minimize the potential for harmful exposures. With compliance to existing laws and regulations, which is mandated by the City through construction permitting, the Project's construction-related impacts would be less than significant.

Accidental Releases. The routine use, storage, transport, and disposal of hazardous materials in accordance with applicable regulations during construction activities would not pose health risks or result in significant impacts. To avoid an impact related to an accidental release, the use of best management practices (BMPs) during construction are implemented as part of a SWPPP as required by the National Pollution Discharge Elimination System General Construction Permit (and included as RR HYD-1). Implementation of an SWPPP would minimize potential adverse effects to workers, the public, and the environment. Construction contract specifications would include strict on-site handling rules and BMPs that include, but are not limited to:

- Establishing a dedicated area for fuel storage and refueling and construction dewatering activities that includes secondary containment protection measures and spill control supplies;
- Following manufacturers' recommendations on the use, storage, and disposal of chemical products used in construction;
- Avoiding overtopping construction equipment fuel tanks;
- Properly containing and removing grease and oils during routine maintenance of equipment; and
- Properly disposing of discarded containers of fuels and other chemicals.

Operation

As described previously, operation of the proposed warehouse buildings includes use of limited hazardous materials, such as: cleaning agents, paints, pesticides, batteries, and aerosol cans. These types of hazardous materials are not acutely hazardous and regulated by existing laws that have been implemented to reduce risks related to the use of these substances. Should future uses of the building utilize or store substantial amounts or acute types of hazardous materials, both federal and state governments require all businesses that handle more than specified amounts of hazardous materials to submit a business plan to regulating agencies. With adherence of existing regulations, impacts would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

c) Emit hazardous emissions or handle hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Impacts Associated with the Proposed Project

No New Impact. There are no schools within one quarter mile of the Project site. The closest schools to the Project site are listed below:

- Lincoln Elementary School, located 0.76-mile north
- De Anza Middle School, located 0.88-mile southwest
- Mt Zion Christian School, located 0.96-mile west
- Linda Vida Kindergarten School, located 0.97-mile southwest
- Euclid Elementary School, located 0.92-mile southwest
- Montessori School of Ontario, located 1.13-miles southwest

Furthermore, as noted in Sections 5.9(a) and 5.9(b), the proposed Project is not anticipated to release hazardous emissions or handle hazardous or acutely hazardous materials, substances, or wastes in significant quantities. Therefore, the proposed Project would not emit hazardous emissions or handle hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school. As such, impacts would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the proposed Project would be consistent with those identified in TOP 2050 SEIR.

d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Impacts Associated with the Proposed Project

No New Impact. The Phase I ESA conducted for the Project site included a review of federal, state, and local regulatory databases to evaluate the Project site and known or suspected sites of environmental contamination pursuant to ASTM Standard E 1527-13.

The Site was identified on the RCRAGR09, RCRANGR09, HWTS, SBFD, HISTUST, FRSCA and ECHOR09 regulatory databases in the GeoSearch Radius Report (Stantec 2021). ABC Products was listed as an active small quantity generator of hazardous waste and Shamrock Paving was listed as a former generator of hazardous waste on the Site. Additionally, SC Fuels and Fleet RV & Boat Storage have generated hazardous waste through the County.

The HISTUST database listing identified a 4,000-gallon solvent UST (installation date unknown), a 2,000-gallon solvent UST (installed 1960) and a 500-gallon motor vehicle UST (installation date unknown) for the Site. The three tanks were identified as single-walled with no vaulting.

Alger Manufacturing Co. located at 724 South Bon View Avenue, adjacent southwest, was identified as having an active investigation for a tetrachloroethylene (PCE) release that has resulted in soil vapor and groundwater plumes of PCE and trichloroethene (TCE).

Due to the prolonged use of hazardous materials, including solvents, the hazardous waste generator licenses and USTs are considered RECs for the Project site. Stantec conducted a limited subsurface soil vapor screening assessment (Appendix H) to determine whether volatile organic compounds (VOCs) are present in the subsurface at concentrations of concern.

Soil vapor sampling activities were completed by Stantec on January 12 and 18, 2022. The assessment consisted of the advancement of ten soil vapor borings to approximately 5.5 feet bgs in areas of potential concern based on findings of the Phase I ESA. A total of ten soil vapor samples were collected for mobile laboratory analysis of VOCs via EPA Method 8260B. VOCs were not detected above laboratory reporting limits in any of the ten soil vapor samples collected (Stantec 2022).

Based on the results of the assessment, the historical uses at the site and surrounding area activities have not resulted in the release of contaminants to the subsurface above screening concentrations of concern, and no additional assessment or mitigation is necessary. Additionally, with adherence to existing federal and state regulations regarding the handling of hazardous materials, impacts related to former onsite uses would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

e) For a project within an airport land use plan, or where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?

Impacts Associated with the Proposed Project

No New Impact. The Project site is Ontario located approximately 0.7 mile west of Ontario International Airport. The Project site is within the Airport Influence Area of the Ontario International Airport Land Use Compatibility Plan (ONTLUCP). The Project site is also within the ONTLUCP Safety Zone, Noise Impact Zone, Overflight Notification Zone, and Airspace Protection Zone. The Federal Aviation Administration (FAA) reviewed the Project and issued a Determination of No Hazard to Air Navigation for Building 1 on August 10, 2022, and for Building 2 on July 22, 2022. The FAA determined the Project would not exceed obstruction standards and would not be a hazard to air navigation provided the conditions of approval are met. The conditions of approval require that FAA Form 7460-2, Notice of Actual Construction or Alteration, be filed anytime the Project is abandoned of within five days after the construction reaches its greatest height. With implementation of these conditions of approval, listed below as RR HAZ-1, impacts related to an inconsistency with the ONTLUCP would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

f) Impair implementation of an adopted emergency response plan or emergency evacuation plan?

Impacts Associated with the Proposed Project

No New Impact.

Construction

The proposed construction activities, including equipment and supply staging and storage, would occur within the Project site, and would not restrict access of emergency vehicles to the Project site or adjacent areas. The installation of new driveways and connections to existing and proposed infrastructure systems that would be implemented during construction of the proposed Project would not require closure of Bon View Avenue, Ontario Boulevard, or California Street. Any temporary lane closures needed for utility expansion and connections, or driveway construction would be required to implement appropriate measures to facilitate vehicle circulation, as included within construction permits. Thus, implementation of the Project through the City's permitting process would ensure existing regulations are adhered to and would reduce potential construction related emergency access or evacuation impacts to a less than significant level.

Operation

Direct access to Building 1 would be provided from four driveways: two on Bon View Avenue and two on Ontario Boulevard. Direct access to Building 2 would be provided from on driveway on California Street. The Project driveways and internal circulation would be required to meet the City's design standards through the City's permitting procedures to ensure adequate emergency access and evacuation. The Project is also required to provide fire suppression facilities (e.g., hydrants and sprinklers). The Fire Department and Public Works Department would review the development plans as part of the permitting procedures to ensure adequate emergency access pursuant to the requirements in Section 503 of the California Fire Code (Title 24, California Code of Regulations, Part 9), included as Municipal Code Section 4-4.01. Therefore, operation of the proposed Project would not physically interfere with an adopted emergency response plan or emergency evacuation plan.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

Impacts Associated with the Proposed Project

No New Impact.

The Project site is not adjacent to any wildland areas. According to the CAL FIRE Fire Hazard Severity Zone map, the Project site is not within a State Responsibility Area (SRA) or within a Very High Fire Hazard Severity Zone (VHFHSZ) (CAL FIRE 2022). As a result, the Project would not expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires.

No new or substantially greater impacts would occur with implementation of the proposed Project when compared to those identified in TOP 2050 SEIR. Impacts from the proposed Project would be consistent with those identified in TOP 2050 SEIR.

Conclusion

Based on the foregoing, none of the conditions identified in State CEQA Guidelines Section 15162 that would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts or mitigation measures exist regarding hazards and hazardous materials. There have not been 1) changes related to development of the Project site that involve new significant environmental effects or a substantial increase in the severity of previously identified effects; 2) substantial changes with respect to the circumstances under which development of the Project site is undertaken that require major revisions of TOP 2050 SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified effects; or 3) the availability of new information of substantial importance relating to significant effects or mitigation measures or alternatives that were not known and could not have been known when TOP 2050 SEIR was certified as completed.

Because none of the conditions identified in State CEQA Guidelines Section 15162 would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts, State CEQA Guidelines 15168 also does not require additional environmental review.

Regulatory Requirements (RRs)

RR HYD-1: Storm Water Pollution Prevention Plan. As listed in Section 5.10, *Hydrology and Water Quality*.

RR HAZ-1: FAA Notice. The Project Applicant/Developer shall submit FAA Form 7460-2, Notice of Actual Construction or Alteration, any time the project is abandoned or within five days after the construction reaches its greatest height (7460-2, Part 2).

Mitigation/Monitoring Required

No new impacts nor substantially more severe hazards and hazardous materials impacts would result from the Project; therefore, no new mitigation measures are required for hazards and hazardous materials.

5.10 HYDROLOGY AND WATER QUALITY	Subsequent or Supplemental EIR			Addendum to EIR	
Would the project:	Substantial Change in Project or Circumstances Resulting in New Significant Effects	New Information Showing Greater Significant Effects than Previous EIR	New Information Identifying New Mitigation or Alternative to Reduce Significant Effect is Declined	Minor Technical Changes or Additions	No New Impact/ No Impact

The discussion below is based on Preliminary WQMP prepared by the City of Ontario, dated August 30, 2022, provided as Appendix I and the Preliminary Hydrology Report prepared by Stantec, dated August 30, 2022, (Stantec 2022b) provided as Appendix J.

Summary of Impacts Identified in TOP 2050 SEIR

TOP 2050 SEIR analyzed impacts related to hydrology and water quality in Section 5.10. TOP 2050 SEIR identified less than significant impacts related to water quality from development activities associated with the project. TOP 2050 would continue policies of the 2010 General Plan to reduce pollutants from entering the City's stormwater system, and future development projects associated with TOP 2050 would be required to control pollutants in discharges of stormwater from post-construction activities through WQMP preparation and implementation. Therefore, water quality standards and waste discharge requirements would not be exceeded, and surface water and groundwater quality would not be degraded.

The City's groundwater supplies are from the Chino Groundwater Basin, which is adjudicated and is considered by the Department of Water Resources (DWR) to be a very low priority groundwater basin. Each water purveyor has an allotted amount of water that can be pumped from the basin so that the safe yield is not exceeded. The City has access to additional water supplies that can accommodate the proposed increase in growth with buildout of TOP and would not interfere with sustainable management of the groundwater basin. Therefore, TOP 2050 SEIR determined that with the implementation of City policies that promote low impact development (LID) and infiltration for new development projects and compliance with the Chino Basin Watermaster's safe yield restrictions, the potential for the project to substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin is considered less than significant.

TOP 2050 SEIR determined TOP 2050 would increase impervious surfaces but would not substantially increase the rate or amount of surface runoff in a manner which would impact water quality or cause flooding. Implementation of best management practices (BMPs) outlined in Storm Water Pollution Prevention Plans (SWPPP), erosion and sediment control plans, Water Quality Management Plans (WQMP), and TOP 2050 policies would address anticipated erosion and siltation impacts. Therefore, TOP 2050 would not result in substantial erosion or siltation on- or off-site. Additionally, TOP 2050 would reduce the potential for on- and off-site flooding during the operational phase of future development projects. Therefore, the project would not result in flooding on- or off-site. Because new development in the City would be required to prepare a hydrology study and drainage analysis in accordance with the San Bernardino County Hydrology Manual, no significant impacts related to surface runoff and capacity of storm drain systems would occur. The City requires that all new structures in a special flood hazard area have elevations above the base flood elevation. Therefore, with implementation of existing policies, the potential for TOP 2050 to impede or redirect flood flows is considered less than significant.

TOP 2050 SEIR identified less than significant impacts related to flood hazards, tsunamis, seiches, or dam inundation. Only small portions of the City are in the 100-year floodplain, adjacent to flood control channels, detention basins, and creeks. The western and southern portions of the City are in the dam inundation zone of San Antonio Dam. Additionally, there are several debris basins in the surrounding areas that impact the northern and eastern parts of the City. The probability of dam failure is very low, and Ontario has never been impacted by a major dam failure. In addition, dam owners are required to maintain emergency action plans that include procedures for damage assessment and emergency warnings. There are no large bodies of water that would result in a seiche during seismic activity. Additionally, the reservoirs/aboveground water tanks within the City are enclosed, thereby minimizing the possibility of a seiche. The project site is inland and approximately 30 miles from the ocean and is not at risk of flooding due to tsunamis. Therefore, impacts associated with the release of pollutants due to inundation would be less than significant.

Adherence to the State Construction General Permit (CGP), implementation of the SWPPP, and adherence to the City's Erosion and Sediment Control Plan requirements would ensure that surface and groundwater quality are not adversely impacted during construction. Projects approved under TOP 2050 would be required to comply with the Santa Ana River Basin Plan and to control pollutants in discharges of stormwater from postconstruction activities under National Pollution Discharge Elimination System (NPDES) Permit No. CAS618036 through preparation of a WQMP identifying BMPs for prevention of stormwater pollution during the post-construction phase, including site-design, source-control, and/or treatment BMPs. Therefore, the project would not obstruct or conflict with the Regional Water Quality Control Board's (RWQCB) Basin Plan or any groundwater management plan, and impacts would be less than significant. Therefore, the project would result in less than significant impacts related to consistency with a water quality control plan or sustainable groundwater management plan.

TOP 2050 SEIR Mitigation Measures:

None.

a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?

Impacts Associated with the Proposed Project

No New Impact.

Construction

Construction of the Project would require grading and excavation of soils, which would loosen sediment, and then have the potential to mix with surface water runoff and degrade water quality. Pollutants of concern during Project construction include sediments, trash, petroleum products, concrete waste (dry and wet), sanitary waste, and chemicals. During construction activities, excavated soil would be exposed, and there would be an increased potential for soil erosion and transport of sediment downstream compared to existing conditions. During a storm event, soil erosion could occur at an accelerated rate. In addition, construction-related pollutants, such as chemicals, liquid and petroleum products (e.g., paints, solvents, and fuels), and concrete-related waste, could be spilled, leaked, or transported via stormwater runoff into adjacent drainages and into downstream receiving waters.

These types of water quality impacts during construction of the Project would be prevented through implementation of a SWPPP, which is required to identify all potential sources of pollution that are reasonably expected to affect the quality of storm water discharges from the construction site (see RR HYD-1 and RR HYD-4). Construction of the Project would disturb more than one acre of soil; therefore, the proposed project would be required to obtain coverage under the NPDES General Permit for Discharges of Storm Water Associated with Construction Activity (see RR HYD-2). Construction activity subject to this permit includes clearing, grading, and ground disturbances such as trenching, stockpiling, or excavation. The Construction General Permit requires implementation of a SWPPP that is required to identify all potential sources of pollution that are reasonably expected to affect the quality of storm water discharges from the construction site. The SWPPP would generally contain a site map showing the construction perimeter, proposed buildings, stormwater collection and discharge points, general pre- and post-construction topography, drainage patterns across the site, and adjacent roadways. The SWPPP would also include construction BMPs. The SWPPP would include construction BMPs such as:

- Prompt revegetation of proposed landscaped/grassed swale areas;
- Perimeter gravel bags or silt fences to prevent off-site transport of sediment;
- Storm drain inlet protection (filter fabric gravel bags and straw wattles), with gravel bag check dams within paved roadways;
- Regular sprinkling of exposed soils to control dust during construction and soil binders for forecasted wind storms;
- Specifications for construction waste handling and disposal;
- Contained equipment wash-out and vehicle maintenance areas;
- Erosion control measures including soil binders, hydro mulch, geotextiles, and hydro seeding of disturbed areas ahead of forecasted storms;
- Construction of stabilized construction entry/exits to prevent trucks from tracking sediment on City roadways;
- Construction timing to minimize soil exposure to storm events; and
- Training of subcontractors on general site housekeeping.

With adherence to the existing requirements and implementation of the appropriate BMPs as ensured through the City's construction permitting process, which would ensure that the Project would not violate any water quality standards or waste discharge requirements, potential water quality degradation associated with construction activities would be minimized, and impacts would be less than significant.

Operation

The Project includes the operation of two warehouse building, which would introduce the potential for pollutants such as chemicals from cleaners, pesticides and sediment from landscaping, trash and debris, and oil and grease from vehicles and trucks. These pollutants could potentially discharge into surface waters and result in degradation of water quality. However, the Project would be required to incorporate a WQMP with post-construction (or permanent) Low Impact Development (LID) site design, source control, and treatment control BMPs (see RR HYD-3). The LID site design would minimize impervious surfaces and provide infiltration of runoff into landscaped areas.

The source control BMPs would minimize the introduction of pollutants that may result in water quality impacts; and treatment control BMPs that would treat stormwater runoff. The Project would install an onsite storm drain system that would convey runoff to infiltration-based underground storm detention chambers. Under proposed conditions the site would be 12 percent pervious.

With implementation of the operational source and treatment control BMPs that are outlined in the Preliminary WQMP prepared for the Project (Appendix I) that would be reviewed and approved by the City during the permitting and approval process, potential pollutants would be reduced to the maximum extent feasible, and implementation of the Project would not substantially degrade water quality. Therefore, impacts would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. The Project is consistent with the impacts identified in TOP 2050 SEIR and the level of impact remains unchanged from that cited in TOP 2050 SEIR.

b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR determined impacts related to groundwater supplies would be less than significant with implementation of City policies that promote LID and infiltration for new development projects and compliance with the Chino Basin Watermaster's safe yield restrictions.

The proposed Project would not deplete groundwater supplies. The City currently draws all of its groundwater supply from the Chino Groundwater Basin (Chino Basin) (UWMP 2020). Pursuant to the Sustainable Groundwater Management Act of 2014 (SGMA), the Chino Basin was named as an adjudicated groundwater basin and is exempt from the requirements of developing a Groundwater Sustainability Plan (GSP) and subsequently was designated a very-low priority basin in Department of Water Resources (DWR) 2019 SGMA Basin Prioritization report. Based on the adjudication provisions in the Chino Basin, the City is able to produce groundwater without limitation, provided any amount produced in excess of the production rights is replenished (UWMP 2020). Because the Project would not pump water from the Project area (as water supplies would be provided by the Ontario Municipal Utilities Company [OMUC]), the proposed Project would not result in a substantial depletion of groundwater supplies.

The Project site is fully developed and is not meaningfully contributing to groundwater recharge. The Project would redevelop the site with a similar amount of impervious area, which would not substantially change groundwater recharge in a manner that will impede management of the basin.

Impacts would be less than significant with compliance with regulatory requirement as identified above, and no mitigation is required. As a result, the Project would not decrease groundwater supplies or interfere substantially with groundwater recharge; and the Project would not impede sustainable groundwater management of the basin. Thus, the Project would have a less than significant impact.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. The Project is consistent with the impacts identified in TOP 2050 SEIR and the level of impact remains unchanged from that cited in TOP 2050 SEIR.

c) Substantially alter the existing drainage pattern or the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i. Result in substantial erosion or siltation on- or off-site?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR concluded that impacts related to runoff increases would be less than significant.

Construction
As described previously, existing City regulations require the Project to implement a SWPPP during construction activities, which would outline erosion control BMPs, such as silt fencing, fiber rolls, or gravel bags, stabilized construction entrance/exit, hydroseeding, that would be implemented during construction to reduce the potential for siltation or erosion. With adherence to the existing requirements and implementation of the appropriate BMPs as ensured through the City's construction permitting process, potential erosion and siltation onsite or offsite associated with construction activities would be minimized, and impacts would be less than significant.

Operation
Under proposed conditions the site would be 12 percent pervious. The pervious surfaces remaining on the site would be landscaped and would not generate soils that could erode. There would be no substantial areas of bare or disturbed soil onsite subject to erosion. In addition, the proposed drainage infrastructure would slow and retain stormwater, which would also limit the potential for erosion or siltation. Finally, the Project is required by the City to implement a WQMP that would provide operational BMPs to ensure that operation of the warehouse buildings would not result in erosion or siltation. As a result, stormwater runoff and the potential for erosion and siltation would not increase with implementation of the Project. With implementation of these regulations, impacts related to erosion or siltation onsite or off-site would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. The Project is consistent with the impacts identified in TOP 2050 SEIR and the level of impact remains unchanged from that cited in TOP 2050 SEIR.

ii. Substantially increase the rate or amount of surface runoff in a manner that would result in flooding on- or off-site?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR concluded that impacts related to runoff increases would be less than significant.

As discussed in Section 5.10 (c) above, during construction, a SWPPP would be implemented to control drainage and maintain drainage patterns across the Project. Also, as discussed in the Preliminary WQMP prepared for the Project (see Appendix I), drainage runoff from the Project site would be adequately handled by the Project's drainage system. The Project would include onsite storm drain lines to convey onsite runoff to storage chambers to provide the appropriate design capture volume, and the Project would not result in flooding on- or off-site. Therefore, impacts would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. The Project is consistent with the impacts identified in TOP 2050 SEIR and the level of impact remains unchanged from that cited in TOP 2050 SEIR.

iii. **Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?**

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR concluded that impacts related to runoff increases would be less than significant. See response to Section 5.10(c)(ii), above.

Site design BMPs would minimize the impacts associated with impervious surfaces. Existing regulations require an onsite storm drain system that would accommodate 2-year, 24-hour flows, in accordance with the San Bernardino County MS4 Permit. Redevelopment of the Project site would not create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. The Project is consistent with the impacts identified in TOP 2050 SEIR and the level of impact remains unchanged from that cited in TOP 2050 SEIR.

iv. **Impede or redirect flood flows?**

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR concluded that impacts related to flood flows would be less than significant.

According to FEMA's FIRM Flood Map 06071C8617J, and TOP Figure S-03, Flood Hazard Zone, the Project site is not within a flood hazard zone. Therefore, the Project would not impede or redirect flood flows and impacts would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. The Project is consistent with the impacts identified in TOP 2050 SEIR and the level of impact remains unchanged from that cited in TOP 2050 SEIR.

d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR identified less than significant impacts related to flood hazards, tsunamis, seiches, or dam inundation.

As discussed in Response 5.10 (c)(iv), the Project site is not within a flood hazard area. Additionally, proper storage requirements for hazardous materials, such as fuels and oils, would be followed in order to limit the risk of release of pollutants due to site inundation. Therefore, implementation of the Project would not risk the release of pollutants due to inundation in a flood hazard zone. Further, the Project site is located over 30 miles inland from the Pacific Ocean and is not located within a tsunami zone. Thus, impacts related to tsunamis would not occur.

A seiche is the sloshing of a closed body of water from earthquake shaking. Seiches are of concern relative to water storage facilities because inundation from a seiche can occur if the wave overflows a containment wall, such as the wall of a reservoir, water storage tank, dam, or other artificial body of water. However, there is no large body of water upstream of the site that may be subject to seiche and that could result in potential flooding on the Project site. Therefore, impacts related to seiche would not occur.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. The Project is consistent with the impacts identified in TOP 2050 SEIR and the level of impact remains unchanged from that cited in TOP 2050 SEIR.

e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR determined impacts related to conflict/obstruction of a water quality control plan or sustainable groundwater management plan would be less than significant.

As described previously, the Project would be required to have an approved SWPPP, which would include construction BMPs to minimize the potential for construction related sources of pollution. For operations, the Project would be required to implement source control BMPs to minimize the introduction of pollutants; and treatment control BMPs to treat runoff. With implementation of the operational source and treatment control BMPs that would be required by the City during the permitting and approval process, potential pollutants would be reduced to the maximum extent feasible, and implementation of the Project would not obstruct implementation of a water quality control plan.

There are no groundwater wells on the Project site, and no wells are proposed as part of the Project. As discussed in Checklist Response threshold 5.10(a), the Project would not involve direct withdrawals of groundwater, nor would it interfere with groundwater recharge such that it would result in a net deficit in aquifer volume or lowering of the local groundwater table levels. The Project site is within the Chino Groundwater Basin which is adjudicated and is considered by DWR to be a very low priority groundwater basin (UWMP 2020). Each water purveyor has an allotted amount of water that can be pumped from the basin so that the safe yield is not exceeded. Because pumping in the groundwater basin is managed, which limits the allowable withdrawal of water from the basin by water purveyors, and the Project does not involve groundwater pumping (as water supplies would be provided by the OMUC), impacts would be less than significant. As detailed in Section 5.19(b), *Utilities and Service Systems*, and as anticipated in TOP 2050 SEIR, the demand for water supplies is expected to be met by the City's available water supply. Additionally, according to the City's 2020 Urban Water Management Plan, increased demands from further development in the City are expected to be met by projected water supplies. Overall, the Project would not conflict with or obstruct a water quality control plan or sustainable groundwater management plan, and no impacts would occur.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. The Project is consistent with the impacts identified in TOP 2050 SEIR and the level of impact remains unchanged from that cited in TOP 2050 SEIR.

Conclusion

Based on the foregoing, none of the conditions identified in State CEQA Guidelines Section 15162 that would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts or mitigation measures exist regarding hydrology and water quality. There have not been 1) changes related to the development of the Project site that involve new significant environmental effects or a substantial increase in the severity of previously identified effects; 2) substantial changes with respect to the circumstances under which development of the Project site is undertaken that require major revisions of TOP 2050 SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified effects; or 3) the availability of new information of substantial importance relating to significant effects or mitigation measures or alternatives that were not known and could not have been known when TOP 2050 SEIR was certified as completed.

Because none of the conditions identified in State CEQA Guidelines Section 15162 would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts, State CEQA Guidelines 15168 also does not require additional environmental review.

Regulatory Requirements (RRs)

RR HYD-1 Storm Water Pollution Prevention Plan. Prior to the issuance of any grading or building permits, the Project Applicant shall prepare a Storm Water Pollution Prevention Plan (SWPPP) utilizing the model form contained in Appendix B of the 2013 CASQA Stormwater Best Management Practices (BMP) Handbook for Construction, and submit a copy of the plan to the City of Ontario Engineering Department for review and approval. A copy of the approved SWPPP shall be maintained in the construction site office at all times during construction, and the Site Superintendent shall use the plan to train all construction site contractors and supervisory personnel in construction site BMP, prior to commencing work on the site.

RR HYD-2 General Waste Discharge Requirements. Prior to the issuance of any grading or building permits, the Project Applicant is required to obtain coverage under the State Water Resources Control Board (SWRCB) General Permit for Storm Water Discharges Associated with Construction Activity. Proof of filing a Notice of Intent (NOI) with the SWRCB for coverage under this permit is required prior to Grading Plan approval and issuance of a grading permit. The Applicant shall submit a copy of the Waste Dischargers Identification Number (WDID) for coverage under the General Construction Permit to the Engineering Department.

RR HYD-3 Water Quality Management Plan. Prior to Grading Plan approval and the issuance of a grading permit, a completed Water Quality Management Plan (WQMP) shall be submitted to, and approved by, the Engineering Department. The WQMP shall be submitted on the San Bernardino County Stormwater Program's model form, and shall identify all Post Construction, Site Design, Source Control, and Treatment Control Best Management Practices (BMPs), that will be incorporated into the Project, in order to minimize the adverse effects on receiving waters.

RR HYD-4 Grading and Erosion Control Plans. Prior to Grading Plan approval and the issuance of a grading permit, an Erosion and Sediment Control Plan shall be submitted to, and approved by, the Engineering Department. The Erosion and Sediment Control Plan shall specifically identify the Best Management Practices (BMPs) that will be implemented on the Project during construction, to reduce the discharge of sediment and other pollutants into the City's storm drain system.

Project Design Features (PDFs)

None.

Mitigation/Monitoring Required

No new impacts nor substantially more severe hydrology and water quality impacts would result from implementation of the Project; therefore, no new or revised mitigation measures are required for hydrology and water quality.

5.11 LAND USE AND PLANNING	Subsequent or Supplemental EIR			Addendum to EIR	
Would the project:	Substantial Change in Project or Circumstances Resulting in New Significant Effects	New Information Showing Greater Significant Effects than Previous EIR	New Information Identifying New Mitigation or Alternative to Reduce Significant Effect is Declined	Minor Technical Changes or Additions	No New Impact/ No Impact
a) Physically divide an established community?	☐	☐	☐	☐	☒
b) Cause a significant environmental impact due to conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☐	☐	☒

Summary of Impacts Identified in TOP 2050 SEIR

TOP 2050 SEIR analyzed impacts related to land use in section 5.11. TOP 2050 SEIR found that the project's land use plan would not divide an established community and would not conflict with an applicable plan adopted for the purpose of avoiding or mitigation an environmental effect. Overall, TOP 2050 SEIR determined impacts related to land use would be less than significant.

TOP 2050 SEIR Mitigation Measures:

None.

a) Physically divide an established community?

Impacts Associated with the Proposed Project

No New Impact. As stated previously, the Project site is currently developed with an RV boat and storage facility and associated parking/storage lot. The Project would develop the site with a two new warehouse buildings and associated infrastructure. No residential uses currently occur on the site that would be impacted or divided by development of the Project.

The Project site is surrounded by commercial and industrial uses to the north, south, east, and west. The Project would be compatible with the adjacent uses. Therefore, the Project would not divide or disrupt the physical arrangement of the existing adjacent uses and would serve as an extension of the existing commercial/industrial area. Furthermore, access to the site would be provided by driveways off an existing roadway (Imperial Highway). Thus, impacts related to physically dividing an established community would not occur from the Project.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. The Project is consistent with the impacts identified in TOP 2050 SEIR and the level of impact remains unchanged from that cited in TOP 2050 SEIR.

b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Impacts Associated with the Proposed Project

No New Impact. The documents regulating land use for the Project site and immediate vicinity are the City's Policy Plan (General Plan), the Ontario Municipal Code, SCAG's RTP/SCS and the Ontario ALUCP. The proposed Project's relationship to these planning documents is described below.

Policy Plan
The City's Policy Plan serves as the General Plan. The Policy Plan states long-term goals, principles, and policies for achieving Ontario's Vision. It guides growth and development to achieve optimum results from the City's physical, economic, environmental, and human resources. The Policy Plan consists of nine elements including Land Use, Housing, Parks & Recreation, Environmental Resources, Community Economics, Safety Mobility, Community Design, and Social Resources. An evaluation of the Project's consistency with applicable goals and policies of the General Plan is provide in Table LU-1.

Table LU-1: Project Consistency with Policy Plan

Policy Plan Goals and Policies	Project Consistency
Land Use Element	
Policy LU 1.3: Adequate Capacity. We require adequate infrastructure and services for all development.	**Consistent.** As discussed throughout this document, the proposed Project would be adequately served by existing infrastructure within the Project site vicinity.
Policy LU-1.5 Jobs-Housing Balance. We coordinate land use, infrastructure, and transportation planning and analysis with regional, county, and other local agencies to further regional and subregional goals for jobs-housing balance.	**Consistent.** The Project would contribute to the jobs-housing balance by providing new high quality industrial jobs in the City. As described in Section 5.14, *Population and Housing*, operation of the proposed Project is estimated to require a permanent workforce of approximately 199 employees.
Policy LU-2.1 Land Use Decisions. We minimize adverse impacts on adjacent properties when considering land use and zoning requests.	**Not Applicable.** The proposed Project does not include a land use or zone change.
Policy LU-2.3 Hazardous Uses. We regulate the development of industrial and similar uses that use, store, produce, or transport toxic substances, air emissions, other pollutants, or hazardous materials. **Policy LU-2.4 Regulation of Nuisances.** We regulate the location, concentration, and operation of potential nuisances. **Policy LU-2.5 Regulation of Uses.** We regulate the location, concentration, and operation of uses that have impacts on surrounding land uses.	**Consistent.** The Project would be consistent with the development standards for the General Industrial (IG) designation, as currently zoned.
Policy LU-2.6 Infrastructure Compatibility. We require infrastructure to be aesthetically pleasing and in context with the community character.	**Consistent.** As shown on Table AES-1, the proposed Project would be consistent with the development standards for the General Industrial (IG) zoning designation
Policy LU-5.7 ALUCP Consistency with Land Use Regulations. We comply with state law that requires general plans, specific plans, and all new development to be consistent with the policies and	**Consistent.** As discussed in Section 5.9, *Hazards and Hazardous Materials*, he proposed Project would comply with the ONT ALUCP.

criteria set forth within an Airport Land Use Compatibility Plan for any public-use airport.	
Environmental Resources Element	
Policy ER-1.6 Urban Run-off Quantity. We encourage the use of low impact development strategies, including green infrastructure, to intercept run-off, slow the discharge rate, increase infiltration, and ultimately reduce discharge volumes to traditional storm drain systems.	**Consistent.** As discussed in Section 5.10, *Hydrology and Water Quality*, the Project would be required to incorporate a WQMP with post-construction (or permanent) Low Impact Development (LID) site design, source control, and treatment control BMPs (see RR HYD-3). The LID site design would minimize impervious surfaces and provide infiltration of runoff into landscaped areas.
Policy ER-1.7 Urban Run-off Quality. We require the control and management of urban run-off, consistent with Regional Water Quality Control Board regulations.	**Consistent.** As discussed in Section 5.10, *Hydrology and Water Quality*, the Project would comply with applicable NPDES permit requirements, and development of a SWPPP, to ensure Project construction would not result in impacts related to stormwater runoff. The Project would be required to incorporate a WQMP with post-construction (or permanent) LID site design, source control, and treatment control BMPs. The LID site design would minimize impervious surfaces and provide infiltration of runoff into landscaped areas.
Policy ER-1.8 Wastewater Management. We require the management of wastewater discharge and collection consistent with waste discharge requirements adopted by the Regional Water Quality Control Board.	**Consistent.** The Project would extend the existing 8-inch sewer line located in Bon View Avenue north to Ontario Boulevard. Building 1 would install new onsite sewer lines that connect to the extended 8-inch sewer line in Bon View Avenue. Building 2 would install new onsite sewer lines that connect to the existing 8-inch sewer line in California Street. Installation of the onsite sewer infrastructure is part of construction of the proposed Project would not result in any physical environmental effects beyond those described throughout this document.
Policy ER-2.1 Waste Diversion. We shall meet or exceed AB 939 requirements.	**Consistent.** As discussed in Section 5.19, *Utilities and Service Systems*, the proposed Project would be consistent with County Solid Waste and State requirements for waste reduction.
Policy ER-3.3 Building and Site Design. We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar, and natural ventilation.	**Consistent.** As discussed throughout this document, the proposed Project would be required to comply with California Title 24 Building Energy Efficiency Standards which are designed to ensure new and existing buildings achieve energy efficiency and preserve outdoor and indoor environmental quality
Policy ER-4.3 Greenhouse Gases (GHG) Emissions Reductions. We will reduce GHG emissions in accordance with regional, state, and federal regulations.	**Consistent.** GHG Emissions generated by construction and operation of the proposed Project would not exceed SCAQMD thresholds, and the Project would not conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases.

Policy ER-4.6 Particulate Matter. We support efforts to reduce particulate matter to meet State and Federal Clean Air Standards.	**Consistent.** Air emissions from construction and operation of the Project would be below SCAQMD emissions thresholds and would not result in an increase in the frequency or severity of existing air quality violations or cause a new violation.
Policy ER-4.8 Tree Planting. We protect healthy trees within the City and plant new trees to increase carbon sequestration and help the regional/local air quality. We expand the tree canopy in environmental justice areas to enhance air quality and reduce the "heat island" effect.	**Consistent.** The Project site contains ornamental shrubs and trees. Should the proposed Project result in the removal or planting of trees, it would be required to comply with Municipal Code Article 10, Chapter 2 (RR BIO-2).
Policy ER-4.9 New Localized Air Pollution Sources Near Existing Sensitive Receptors. We require new developments to conduct a Health Risk Assessment for land uses that generate more than 100 trucks per day or 40 trucks per day by trucks operating transportation refrigeration units (TRU's) within 1,000 feet from sensitive land uses (California Health and Safety Code § 42705.5(a)(5)). If the health risk assessment determines the new development poses health hazards that increase the incremental cancer risk above the threshold established by the South Coast Air Quality Management District (AQMD), we will only approve permits upon the condition that adequate mitigation measures are proposed and implemented for potential impacts on the sensitive uses around the site and along the route within Ontario taken by the trucks to and from freeways. We require new developments that must perform a health risk assessment to conduct additional public outreach by sending notifications in multiple languages to all residents living within 500 feet, and encourage hosting a public meeting.	**Consistent.** As discussed in Section 5.3, *Air Quality*, the proposed Project includes a construction and operational Health Risk Assessment which found the Project would not create a significant health hazard to nearby sensitive uses.
Policy ER-5.2 Entitlement and Permitting Process. We comply with state and federal regulations regarding protected species.	**Consistent.** As discussed in Section 5.4, *Biological Resources*, the proposed Project would not have an impact any protected plant or wildlife species.
Community Economics Element	
Policy CE-1.1 Jobs-Housing Balance. We pursue improvement to the Inland Empire's balance between jobs and housing by promoting job growth that reduces the regional economy's reliance on out-commuting. **CE-1.2 Jobs and Workforce Skills.** We use our economic development resources to: 1. attract jobs suited for the skills and education of current and future City residents;	**Consistent.** The Project would contribute positively to the jobs-housing balance by providing new high quality industrial jobs in the City. As described in Section 5.14, *Population and Housing*, operation of the proposed Project is estimated to require a permanent workforce of approximately 199 employees.

2. work with regional partners to provide opportunities for the labor force to improve its skills and education; and 3. attract businesses that increase Ontario's stake and participation in growing sectors of the regional and global economy.	
Policy CE-2.1 Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community. (Link to Community Design Element) **Policy CE-2.2 Development Review.** We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional, and sustainable places that will compete well with their competition within the region. **Policy CE-2.4 Protection of Investment.** We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality. **Policy CE-2.5 Private Maintenance.** We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.	**Consistent.** As shown in Figures 3-2a-b, *Elevations*, both buildings would establish an architectural presence through an emphasis on building finish materials and consistent material usage and color scheme. The buildings would be white and shades of grey with highlights of indigo blue. The use of landscaping, building layout, finish materials, and accenting on the Project site would create a quality architectural presence along the Ontario Boulevard, Bon View Avenue, and California Street frontages.
Safety Element	
Policy S-1.2 Entitlement and Permitting Process. We follow state guidelines and the California Building Code to determine when development proposals must conduct geotechnical and geological investigations.	**Consistent.** As discussed throughout this document, the Project would comply with the CBC.
Policy S-2.1 Entitlement and Permitting Process. We require hydrological studies prepared by a state-certified engineer when new development is located in a 100-year or 500-year floodplain to assess the impact that the new development will have on the flooding potential of existing development down-gradient. **Policy S-2.2 Floodplain Mapping.** We require any new development partially or entirely in 100-year flood zones to provide detailed floodplain mapping for 100- and 200-year storm events as part of the development approval process. **Policy S-2.3 Facilities that Use Hazardous Materials.** We comply with state and federal law and do not permit facilities using, storing, or otherwise involved with substantial quantities of onsite hazardous materials to be located in the 100-year flood zone or 500-year flood zone unless	**Not Applicable.** As discussed in Section 5.10, *Hydrology and Water Quality*, the Project site is not within a 100-year or 500-year flood zone.

all standards of elevation, floodproofing, and storage have been implemented to the satisfaction of the Building Department.	
Policy S-2.5 Stormwater Management. We maintain the storm drain system to convey a 100-year storm, when feasible, and encourage environmental site design practices to minimize flooding and increase groundwater recharge, including natural drainage, green infrastructure, and permeable ground surfaces.	**Consistent.** As discussed in Section 5.10, *Hydrology and Water Quality*, the Project would be required to incorporate a WQMP with post-construction (or permanent) Low Impact Development (LID) site design, source control, and treatment control BMPs (see RR HYD-3). The LID site design would minimize impervious surfaces and provide infiltration of runoff into landscaped areas.
Policy S-3.1 Prevention Services. We proactively mitigate or reduce the negative effects of fire, hazardous materials release, and structural collapse by implementing the regularly adopted California Fire Code and California Building Code. **Policy S-3.8 Fire Prevention through Environmental Design.** We require new development to incorporate fire prevention consideration in the design of streetscapes, sites, open spaces, and buildings.	**Consistent.** As part of the permitting process, the Project plans would be reviewed by the City's Fire Department and the Building Department to ensure that the Project plans meet the fire protection requirements. Additionally, the proposed facility would be required to comply with City fire suppression standards including current CBC and would provide adequate fire access.
Policy S-4.1 Noise Mitigation. We utilize the City's Noise Ordinance, building codes, and subdivision and development codes to mitigate noise impacts.	**Consistent.** As discussed in Section 5.13, *Noise*, the proposed Project would result in less than significant impacts related to noise. Therefore, the Project would not require noise mitigation.
Policy S-4.6 Airport Noise Compatibility. We utilize information from Airport Land Use Compatibility Plans to prevent the construction of new noise-sensitive land uses within airport noise impact zones.	**Consistent.** As discussed in Section 5.9, *Hazards and Hazardous Materials*, the Federal Aviation Administration (FAA) reviewed the Project and issued a Determination of No Hazard to Air Navigation for Building 1 on August 10, 2022, and for Building 2 on July 22, 2022. The FAA determined the Project would not exceed obstruction standards and would not be a hazard to air navigation provided the conditions of approval are met. The conditions of approval require that FAA Form 7460-2, Notice of Actual Construction or Alteration, be filed anytime the Project is abandoned of within five days after the construction reaches its greatest height.
Policy S-5.1 Dust Control Measures. We require the implementation of Best Management Practices for dust control at all excavation and grading projects.	**Consistent.** The proposed Project would include a SWPPP (RR HYD-1) which includes BMPs that require dust control through regular sprinkling of exposed soils to control dust during construction and soil binders for forecasted wind storms.
Policy S-6.4 Safe Storage and Maintenance Practices. We require that the users of hazardous	**Consistent.** While the future tenants of the warehouse buildings are unknown, under California Health and Safety Code Section 25531 et seq., CalEPA requires businesses operating with a

materials be adequately prepared to prevent and mitigate hazardous materials releases.	regulated substance that exceeds a specified threshold quantity to register with a managing local agency, known as the Certified Unified Program Agency (CUPA). Additionally, businesses are required to provide workers with training on the safe use, handling, and storage of hazardous materials. Businesses are also required to maintain equipment and supplies for containing and cleaning up spills of hazardous materials that can be safely contained and cleaned by onsite workers and to immediately notify emergency response agencies in the event of a hazardous materials release that cannot be safely contained and cleaned up by onsite personnel. Compliance with existing laws and regulations governing hazard and hazardous materials would ensure safe storage of hazardous materials.
Policy S-7.4 Crime Prevention through Environmental Design (CPTED). We require new development to incorporate CPTED in the design of streetscapes, sites, open spaces, and buildings.	**Consistent.** The Project would incorporate multiple crime prevention strategies. As shown on Figure 3-1, the Project would provide security gates in order to limit access to truck loading areas and would provide security lighting throughout the site and along the Bon View, Ontario Boulevard and California Street frontage. Furthermore, Project plans would be reviewed by the Ontario Police Department to ensure that proper measures are incorporated into the Project design.
Mobility Element	
Policy M-1.2 Mitigation of Impacts. We require development to mitigate its traffic impacts.	**Consistent.** As discussed in Section 5.17, *Transportation*, the proposed Project would include Project Design Features to mitigate its VMT impacts.
Policy M-1.5 Level of Service. Maintain a peak hour Level of Service (LOS) E or better at all intersections. Maintain Level of Service D or better on arterial streets in the City. Develop and maintain a list of locations where LOS E or LOS F are considered acceptable and would be exempt from this level of service policy. Considerations for LOS exemption include being restricted by environmental constraints, lacking available right-of-way, deterring an increase in VMT, or degrading other modes of travel (such as bicycle or pedestrian infrastructure).	**Consistent.** As discussed in Section 5.17, *Transportation*, the Project would not result in impacts related to traffic level of service.
Policy M-1.6 Reduce Vehicle Miles Traveled. We will strive to reduce VMT through a combination of land use, transportation projects, travel demand management strategies, and other trip reduction measures in coordination with development projects and public capital improvement projects.	**Consistent.** As discussed in Section 5.17, *Transportation*, the proposed Project would include measures to reduce VMT to a less than significant level.

Community Design Element	
Policy CD-2.1 Quality Building Design and Architecture. We encourage all development projects to convey visual interest and character through: 1. Building volume, massing, and height to provide context-appropriate scale and proportion; 2. A true architectural style which is carried out in plan, section, and elevation through all aspects of the building and site design and appropriate for its setting; and 3. Exterior building materials that are articulated, high quality, durable, and appropriate for the architectural style.	**Consistent.** The proposed warehouse buildings have been designed to convey visual interest and character. Both buildings would establish an architectural presence through an emphasis on building finish materials and consistent material usage and color scheme. The buildings would be white and shades of grey with highlights of indigo blue. The use of landscaping, building layout, finish materials, and accenting on the Project site would create a quality architectural presence along the Ontario Boulevard, Bon View Avenue, and California Street frontages.
Policy CD-2.9 Landscape Design. We encourage durable, sustainable, and drought-tolerant landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.	**Consistent.** The proposed Project would include drought-tolerant landscaping materials along the property line and adjacent to the proposed buildings. The layering of landscaping between the proposed building and the surrounding roadways would provide visual depth and distance between the roadways and proposed structure. Landscaping would be complimentary to the surrounding community character.

Ontario Municipal Code/Development Code
The Project site has a zoning designation of General Industrial (IG). According to Division 5.01 of the Ontario Development Code, the IG zone is intended to accommodate a wide range of manufacturing and assembly activities, storage and warehousing activities, and other similar uses developed at a maximum FAR of 0.55. As detailed previously in Table AES-1, the proposed Project would be consistent with the development standards for the IG zoning district. Thus, the proposed Project would not conflict with any applicable zoning regulations adopted for the purpose of avoiding or mitigating an environmental effect. No impacts would occur.

Regional Transportation Plan/Sustainable Communities Strategy
SCAG's RTP/SCS identifies that land use strategies that focus on new housing and job growth in areas served by high quality transit and other opportunity areas would be consistent with a land use development pattern that supports and complements the proposed transportation network. The core vision in the 2020–2045 RTP/SCS is to better manage the existing transportation system through design management strategies, integrate land use decisions and technological advancements, create complete streets that are safe to all roadway users, preserve the transportation system, and expand transit and foster development in transit-oriented communities. The Project would be required to comply with the goals and policies of SCAG's Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS). As shown in Table LU-2, the proposed Project would be consistent with the goals and policies of the plan. As such, no impact related to regional plan inconsistency would occur.

Table LU-2: RTP/SCS Consistency

RTP/SCS Policy	Proposed Project Consistency with Policy
RTP/SCS G1: Encourage regional economic prosperity and global competitiveness.	**Consistent.** The Project would include development of an industrial site that would benefit regional

	economics by providing increased employment and providing additional goods and services. As an individual development, the Project is limited in its ability to directly contribute to regional economic prosperity and global competitiveness.
RTP/SCS G2: Improve mobility, accessibility, reliability, and travel safety for people ang goods.	**Consistent.** As an individual development, the Project is limited in its ability to maximize mobility and access for people and goods in the SCAG region. However, the Project would not create substantial traffic impediments that would affect the accessibility of goods in the region and it would provide added mobility in the immediate vicinity of the Project through the incorporation of sidewalks.
RTP/SCS G3: Ensure the preservation, security, and resilience of the regional transportation system.	**Not Applicable.** As an individual development, the Project is limited in its ability to ensure security and resilience of the regional transportation system. There are no components of the Project that would result in the deterioration of the transportation system.
RTP/SCS G4: Increase person and goods movement and travel choices within the transportation system.	**Not Applicable.** As an individual development, the Project is limited in its ability to maximize the goods movement and travel choices within the SCAG region. The Project would not create substantial traffic impediments and would not affect the accessibility of goods to the surrounding area. The Project would support the overall distribution and movements of goods in the region.
RTP/SCS G5. Reduce greenhouse gas emissions and improve air quality.	**Consistent.** While the Project would not improve air quality or reduce greenhouse gas emissions, it would not prevent SCAG from implementing actions that would improve air quality within the region and the Project would incorporate various measures related to building design, landscaping, and energy systems to promote the efficient use of energy, pursuant to Title 24 CALGreen Code and Building Energy Efficiency Standards and Consistent with Policy NR-1.9.
RTP/SCS G6: Support healthy and equitable communities.	**Consistent.** The Project would comply with Citywide goal and policies to support healthy and equitable communities. Additionally, the Project would construct frontage improvements, including sidewalks, which would encourage walking in the Project area.
RTP/SCS G7: Adapt to a changing climate and support an integrated regional development pattern and transportation network.	**Consistent.** This policy would be implemented by cities and the counties within the SCAG region as part of their overall planning efforts; the Project however is consistent with industrial use planned for the area.
RTP/SCS G8: Leverage new transportation technologies and data-driven solutions that result in more efficient travel.	**Not Applicable.** This policy would be implemented by cities and the counties within the SCAG region as part of the overall planning and maintenance of the

	regional transportation system. The Project would not conflict with this goal.
RTP/SCS G9: Encourage development of diverse housing types in areas that are supported by multiple transportation options.	**Not Applicable.** The proposed Project would develop a truck terminal in an area that is designated and zoned for industrial development.
RTP/SCS G10: Promote conservation of natural and agricultural lands and restoration of habitats.	**Consistent.** The proposed Project would be consistent with goals and policies of the City's General Plan and would not cause significant environmental impacts to agricultural lands or biological resources.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. The Project is consistent with the impacts identified in TOP 2050 SEIR and the level of impact remains unchanged from that cited in TOP 2050 SEIR.

Conclusion

Based on the foregoing, none of the conditions identified in State CEQA Guidelines Section 15162 that would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts or mitigation measures exist regarding land use and planning. There have not been 1) changes related to development of the Project site that involve new significant environmental effects or a substantial increase in the severity of previously identified effects; 2) substantial changes with respect to the circumstances under which development of the Project site is undertaken that require major revisions of TOP 2050 SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified effects; or 3) the availability of new information of substantial importance relating to significant effects or mitigation measures or alternatives that were not known and could not have been known when TOP 2050 SEIR was certified as completed.

Because none of the conditions identified in State CEQA Guidelines Section 15162 would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts, State CEQA Guidelines 15168 also does not require additional environmental review.

Regulatory Requirements (RRs)

None.

Project Design Features (PDFs)

None.

Mitigation/Monitoring Required

No new impacts nor substantially more severe land use and planning impacts would result from implementation of the Project; therefore, no new or revised mitigation measures are required regarding land use and planning.

5.12 MINERAL RESOURCES	Subsequent or Supplemental EIR			Addendum to EIR	
Would the project:	Substantial Change in Project or Circumstances Resulting in New Significant Effects	New Information Showing Greater Significant Effects than Previous EIR	New Information Identifying New Mitigation or Alternative to Reduce Significant Effect is Declined	Minor Technical Changes or Additions	No New Impact/ No Impact
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☐	☒
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☐	☒

Summary of Impacts Identified in TOP 2050 SEIR

TOP 2050 SEIR analyzed impacts related to mineral resources in Section 5.12. TOP 2050 SEIR concluded that the project would not result in the loss of availability of a known mineral resource due to existing regulations and land uses. Upon implementation of regulatory requirements and standard conditions of approval, impacts of the project were determined to be less than significant.

TOP 2050 SEIR Mitigation Measures:

None.

a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

Impacts Associated with the Proposed Project

No New Impact. According to TOP 2050 SEIR, the Project site is identified as within Mineral Resource Zone (MRZ) 3 which is defined as an area where the significance of mineral deposits is unknown. The Project site has a land use designation of Industrial (IND) and is planned for general industrial uses. Furthermore, the Project site is currently developed with an RV and boat storage facility and associated parking lot and has not recently been used for mineral extractions. Thus, there are no available mineral resources that would be affected by the Project, and impacts would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on the general plan, specific plan or other land use plan?

Impacts Associated with the Proposed Project

No New Impact. As discussed above, no known valuable mineral resources exist on or near the Project site, and no mineral resource extraction activities occur on the site. The Project site is developed with an RV boat

and storage facility and associated paved parking lot. Thus, the Project would not result in the loss of availability of locally important mineral resources. Accordingly, no impact would occur.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

Conclusion

Based on the foregoing, none of the conditions identified in State CEQA Guidelines Section 15162 that would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts or mitigation measures exist regarding mineral resources. There have not been 1) changes related to development of the Project site that involve new significant environmental effects or a substantial increase in the severity of previously identified effects; 2) substantial changes with respect to the circumstances under which development of the Project site is undertaken that require major revisions of TOP 2050 SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified effects; or 3) the availability of new information of substantial importance relating to significant effects or mitigation measures or alternatives that were not known and could not have been known when TOP 2050 SEIR was certified as completed.

Because none of the conditions identified in State CEQA Guidelines Section 15162 would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts, State CEQA Guidelines 15168 also does not require additional environmental review.

Regulatory Requirements (RRs)

None.

Project Design Features (PDFs)

None.

Mitigation/Monitoring Required

No new impacts nor substantially more severe mineral resources impacts would result from implementation of the Project; therefore, no new or revised mitigation measures are required regarding mineral resources.

This section is based on the Noise and Vibration Impact Analysis, prepared by LSA, dated November 2022, provided as Appendix K.

Summary of Impacts Identified in TOP 2050 SEIR

TOP 2050 SEIR analyzed impacts related to noise in Section 5.13. TOP 2050 SEIR identified that construction-related noise impacts from buildout of TOP 2050 would be significant and unavoidable even with mitigation. TOP 2050 SEIR determined stationary noise sources would not increase substantially compared to existing conditions and impacts would be less than significant. Additionally, TOP 2050 SEIR determined transportation related noise would increase more substantially than stationary-source noise, however impacts related to transportation noise increases would be less than significant.

TOP 2050 SEIR determined impacts related to construction related vibration would be significant and unavoidable, even with mitigation. However, operational related vibration impacts would be less than significant. TOP 2050 SEIR also determined that implementation of TOP 2050 could expose noise sensitive uses to excessive noise levels from the Ontario International Airport and that impacts would be significant and unavoidable, even after mitigation.

TOP 2050 SEIR Mitigation Measures:

Mitigation Measure 12-1 Prior to the issuance of building permits for any project that involves a noise-sensitive use within the 65 dBA CNEL contour of the Ontario International Airport, the project property owner/developers shall retain an acoustical engineer to conduct an acoustic analysis and identify, where appropriate, site design features and/or required building acoustical improvements (e.g., sound transmission class rated windows, doors, and attic baffling), to ensure compliance with the City's Noise Compatibility Criteria and the California State Building Code and California Noise Insulation Standards (Titles 24 and 21 of the California Code of Regulations).

Mitigation Measure 12-2 Prior to issuance of a building permit, individual projects that involve vibration-intensive construction activities, such as pile drivers, jack hammers, and vibratory rollers near sensitive receptors shall be evaluated for potential vibration impacts. For construction within 135 feet of fragile structures, such as historical resources, within 100 feet of nonengineered timber and masonry buildings (e.g., most residential buildings), or within 75 feet of engineered concrete and masonry (no plaster); or a vibratory roller within 25 feet of any structure, the project applicant shall prepare a noise and vibration analysis to assess and mitigate potential noise and vibration impacts related to these activities. This noise and vibration analysis shall be conducted by a qualified and experienced acoustical consultant or engineer. The vibration levels shall not exceed Federal Transit Administration (FTA) architectural damage thresholds (e.g., 0.12 inches per second [in/sec] peak particle velocity [PPV] for fragile or historical resources, 0.2 in/sec PPV for nonengineered timber and masonry buildings, and 0.3 in/sec PPV for engineered concrete and masonry). If vibration levels would exceed this threshold, alternative uses shall be used, such as drilling piles as opposed to pile driving and static rollers as opposed to vibratory rollers. If necessary, construction vibration monitoring shall be conducted to ensure vibration thresholds are not exceeded.

Mitigation Measure 12-4 Construction activities associated with new development that occurs near sensitive receptors shall be evaluated for potential noise impacts. Construction contractors shall implement the following measures for construction activities in the City of Ontario. Construction plans submitted to the City shall identify these measures on demolition, grading, and construction plans. The City of Ontario Planning and Building Departments shall verify that grading, demolition, and/or construction plans submitted include these notations prior to issuance of demolition, grading, and/or building permits.

- Construction activity is limited to the hours between 7:00 am and 6:00 pm Monday through Friday and 9:00 am to 6:00 pm Saturdays and Sundays, as prescribed in Municipal Code Section 5-29.09.
- During the entire active construction period, equipment and trucks used for project construction shall use the best-available noise control techniques wherever feasible (e.g., improved mufflers, equipment re-design, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds).
- Impact tools (e.g., jack hammers and hoe rams) shall be hydraulically or electrically powered wherever possible. Where the use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used along with external noise jackets on the tools.
- Stationary equipment such as generators and air compressors shall be located as far as feasible from nearby noise-sensitive uses.
- Stockpiling shall be located as far as feasible from nearby noise-sensitive receptors.
- Construction traffic shall be limited, to the extent feasible, to approved haul routes established by the City's Engineering Department.
- At least 10 days prior to the start of construction activities, a sign shall be posted at the entrance(s) to the job site, clearly visible to the public, that includes permitted construction days and hours as well as the telephone numbers of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise or vibration complaint. If the authorized contractor's representative receives a complaint, he/she shall investigate, take appropriate corrective action, and report the action to the City.
- Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to reinforce the prohibition of unnecessary engine idling. All other equipment shall be turned off if not in use for more than 5 minutes.
- During the entire active construction period and to the extent feasible, the use of noise producing signals, including horns, whistles, alarms, and bells, shall be for safety warning purposes only. The construction manager shall use smart back-up alarms, which automatically adjust the alarm level based on the background noise level or switch off back-up alarms and replace with human spotters in compliance with all safety requirements and laws.

- Erect temporary noise barriers (at least as high as the exhaust of equipment and breaking line-of-sight between noise sources and sensitive receptors), as necessary and feasible, to maintain construction noise levels at or below the performance standard of 80 dBA Leq. Barriers shall be constructed with a solid material that has a density of at least 1.5 pounds per square foot with no gaps from the ground to TOP of the barrier and may be lined on the construction side with an acoustical blanket, curtain, or equivalent absorptive material.

Existing Ambient Noise Levels

Two long-term (24-hour) noise level measurement were conducted on May 31, 2022. Table N-1 provides a summary of the measured hourly noise levels and calculated CNEL level from the long-term noise level measurement. As shown in Table N-1, hourly noise levels at the surrounding uses are as low as 49.3 dBA Leq during nighttime hours and 59.9 dBA Leq during daytime hours.

Table N-1: Long-Term 24-Hour Ambient Noise Measurements

Location		Daytime Noise Levels[1] (dBA L_{eq})	Evening Noise Levels[2] (dBA L_{eq})	Nighttime Noise Levels[3] (dBA L_{eq})	Daily Noise Levels (dBA CNEL)
LT-1	On an electrical powerline pole on the wide side of residential building, 1004 E California St., approximately 70 feet from California St centerline.	59.9 – 68.4	61.8 – 66.5	49.3 – 59.5	66.1
LT-2	Located on the property 627 S Bon View, west of the property line, near the truck loading area.	63.9 – 67.5	61.1 – 65.1	52.3 – 64.5	67.9

Note: Noise measurements were conducted from May 31 to June 1, 2022, starting at 12:00 p.m.
[1] Daytime Noise Levels = noise levels during the hours from 7:00 a.m. to 7:00 p.m.
[2] Evening Noise Levels = noise levels during the hours from 7:00 p.m. to 10:00 p.m.
[3] Nighttime Noise Levels = noise levels during the hours from 10:00 p.m. to 7:00 a.m.
dBA = A-weighted decibels
CNEL = Community Noise Equivalent Level
L_{eq} = equivalent continuous sound level
Source: Noise and Vibration Impact Analysis (Appendix K)

City of Ontario General Plan

The City of Ontario establishes land use compatibility standards in the Safety Element of the City of Ontario General Plan (2010). According to the noise standards, up to 80 dBA CNEL is considered to be the "normally acceptable" noise level for industrial land uses. Additionally, noise levels of up to 65 dBA CNEL are considered "normally acceptable" for residential uses.

City of Ontario Noise Ordinance

Noise generated in the City of Ontario is regulated under Chapter 29 (Noise) of the City's Municipal Code. The allowable exterior noise levels are listed in Table N-2.

Table N-2: Municipal Code Exterior Noise Standards

Land Use	Allowed Equivalent Noise Level Leq	
	Daytime (7:00 a.m. to 10:00 p.m.)	Nighttime (10:00 p.m. to 7:00 a.m.)
Single-Family Residential	65 dBA	45 dBA
Multi-Family Residential	65 dBA	50 dBA
Commercial Property	65 dBA	60 dBA
Residential Portion of Mixed Used	70 dBA	70 dBA
Manufacturing and Industrial, Other Uses	70 dBA	70 dBA

Source: City of Ontario Municipal Code Section 5-29.04

Additionally, Municipal Code Section 5-29.09 (Construction activity noise regulations) states that no person, while engaged in construction, remodeling, digging, grading, demolition or any other related building activity, shall operate any tool, equipment, or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a police or code enforcement officer, on any weekday except between the hours of 7:00 am and 6:00 pm or on Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m.

Federal Transit Administration

Because the City does not have construction noise level limits, construction noise for the Project was assessed using criteria from the Federal Transit Administration's (FTA) Transit Noise and Vibration Impact Assessment Manual (FTA 2018). Table N-3 presents the FTA's general assessment daytime construction noise criteria.

Table N-3: Federal Transit Administration Daytime Construction Noise Criteria

Land Use	Daytime 1-hour L_{eq} (dBA)	Nighttime 1-hour L_{eq} (dBA)
Residential	80	70
Commercial	85	85
Industrial	90	90

Source: Transit Noise and Vibration Impact Assessment Manual (FTA 2018)

a) Generation of substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR determined that construction related noise would be significant and unavoidable and operational noise would be less than significant.

Construction Noise

Noise generated by construction equipment would include a combination of trucks, power tools, concrete mixers, and portable generators that when combined can reach high levels. Construction is expected to occur in the following stages: demolition, site preparation, grading, building construction, architectural coating, paving. The Project would not include pile driving, which typically results in the highest construction noise volumes.

The Project construction noise would be temporary in nature as the operation of each piece of construction equipment would not be constant throughout the construction day, and equipment would be turned off when not in use. The typical operating cycle for a piece of construction equipment involves one or two minutes of full power operation followed by three or four minutes at lower power settings.

Table N-4 below lists typical construction equipment noise levels based on a distance of 50 feet between with equipment and a noise receptor. As shown, noise levels generated by heavy construction equipment can range from approximately 55 dBA to 85 dBA when measured at 50 feet.

Table N-4: Typical Construction Equipment Noise Levels

Equipment Description	Acoustical Use Factor[1] (percent)	Maximum Noise Level (L_{max}) at 50 feet[2]
Auger Drill Rig	20	84

Backhoes	40	80
Compactor (ground)	20	80
Compressor	40	80
Cranes	16	85
Dozers	40	85
Dump Trucks	40	84
Excavators	40	85
Flat Bed Trucks	40	84
Forklift	20	85
Front-end Loaders	40	80
Graders	40	85
Impact Pile Drivers	20	95
Jackhammers	20	85
Paver	50	77
Pickup Truck	40	55
Pneumatic Tools	50	85
Pumps	50	77
Rock Drills	20	85
Rollers	20	85
Scrapers	40	85
Tractors	40	84
Trencher	50	80
Welder	40	73

Note: Noise levels reported in this table are rounded to the nearest whole number
[1] Usage factor is the percentage of time during a construction noise operation that a piece of construction equipment is operating at full power.
[2] Maximum noise levels were developed based on Specification 721.560 from the Central Artery/Tunnel program to be consistent with the City of Boston's Noise Code for the "Big Dig" project.
FHWA = Federal Highway Administration
Lmax = maximum instantaneous sound level
Source: Noise and Vibration Impact Analysis (Appendix K)

Table N-5 below shows the nearest sensitive uses to the Project site, their distance from the center of construction activities, and composite noise levels expected during construction.

Table N-5: Potential Construction Noise Impacts at Nearest Receptors

Receptor (Location)	Composite Noise Level (dBA L_{eq}) at 50 feet[1]	Distance (feet)	Composite Noise Level (dBA L_{eq})
Industrial (south)	88	145	79
Industrial (east)		295	73
Residence (south)		465	69
Industrial (west)		475	69

[1]The composite construction noise level represents the demolition and site preparation phases which are expected to result in the greatest noise level as compared to other phases.
dBA L_{eq} = average A-weighted hourly noise level
Source: Noise and Vibration Impact Analysis (Appendix K)

As shown in Table N-5, it is expected that composite noise levels during construction would reach 79 dBA L_{eq} at the nearest receptor to the south of the site. However, the construction noise levels predicted in Table N-5 would only occur when all construction equipment is operating simultaneously, which is a conservative

assumption, and unlikely to occur. Additionally, noise generated from construction activities is temporary in nature and would cease upon completion of construction. Furthermore, construction-related noise impacts would remain below the 80 dBA and 90 dBA 1-hour construction noise level criteria for daytime construction noise level criteria as established by the Federal Transit Administration (FTA) for residential and industrial/commercial land uses, respectively, and therefore Project construction noise would be less than significant.

Additionally, as described above, Municipal Code Section 5-29.09 exempts construction noise between the hours of 7:00 a.m. and 6:00 p.m. on weekdays and between the hours of 9:00 a.m. and 6:00 p.m. on Saturdays and Sundays. The Project would comply with the City's construction hours regulations.

Operational Noise

Long term off-site stationary noise impacts from the Project could include on-site heating, ventilation, and air conditioning (HVAC) equipment, trash enclosure activity, truck deliveries, and loading and unloading activities. Table N-6 shows the combined hourly noise levels generated by HVAC equipment and truck delivery activities at the closest off-site land uses.

Table N-6: Exterior Noise Level Impacts

Receptor	Direction	Noise Level Standard (dBA L_{eq})	Project Generated Noise Levels (dBA L_{eq})	Potential Operational Noise Impact?[1]
Industrial	South	70	61.6	No
Industrial	East	70	60.6	No
Residential	South	65	51.0	No

[1] A potential operational noise impact would occur if (1) the project noise impacts are greater than the applicable noise standard, OR (2) if the quietest ambient hour is greater than the applicable noise standard and project noise impacts are 3 dBA greater than the quietest ambient hour.
dBA = A-weighted decibels
Leq = equivalent noise level
Source: Noise and Vibration Impact Analysis (Appendix K)

As shown in Table N-6, Project related noise level impacts would range from 51.0 dBA Leq to 61.6 dBA Leq at the surrounding receptors. These levels would be below the City's noise standard of 65 dBA Leq at the residential land uses and below the noise standard of 70 dBA Leq for industrial land uses. Because Project noise levels would not exceed the maximum permissible noise levels, the impact would be less than significant.

Long-Term Off-Site Traffic Noise Impacts

Traffic-related noise conditions along roadway segments in the Project vicinity were evaluated using the guidelines included in the FHWA Highway Traffic Noise Prediction Model (FHWA-RD-77-108) (Appendix K). Table N-7 provides the traffic noise levels for the existing with and without Project and opening year with and without Project scenarios. These noise levels represent the worst-case scenario, which assumes no shielding is provided between the traffic and the location where the noise contours are drawn.

Table N-7: Traffic Noise Levels Without and With Project

Roadway Segment	Existing Without Project		Existing With Project		
	ADT	CNEL (dBA) 50 feet from Centerline of Nearest Lane	ADT	CNEL (dBA) 50 feet from Centerline of Nearest Lane	Increase from Existing Conditions
Bon View Avenue between Ontario Boulevard and Mission Boulevard	7,200	63.0	8,050	63.4	0.4
Ontario Boulevard East of Bon View Avenue	440	51.3	500	51.8	0.5
Mission Boulevard between Bon View Avenue and Grove Avenue	23,000	67.4	26,540	68.0	0.6
Grove Avenue North of Mission Boulevard	32,600	69.6	34,700	69.9	0.3

Shaded cells indicate roadway segments adjacent to the project site.
ADT = average daily traffic
CNEL= Community Noise Equivalent Level
dBA = A-weighted decibels
Source: Noise and Vibration Impact Analysis (Appendix K)

Table N-7 shows that the increase in Project-related traffic noise would be no greater than 0.6 dBA. Noise level increases above 3.0 dBA may be perceptible to some people in an outdoor environment, but the expected increase is less than the readily perceptible threshold of 5.0 dBA. Therefore, traffic noise impacts from Project-related traffic on off-site sensitive receptors would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. The Project is consistent with the impacts identified in TOP 2050 SEIR and the level of impact remains unchanged from that cited in TOP 2050 SEIR.

b) Generation of excessive groundborne vibration or groundborne noise levels?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR determined impacts related to construction related vibration would be significant and unavoidable, however, impacts related to operational vibration would be less than significant.

Construction
Construction activity can cause varying degrees of ground vibration, depending on the equipment and methods used, the distance to receptors, and soil type. Construction vibrations are intermittent, localized intrusions. The use of heavy construction equipment, particularly large bulldozers, and large loaded trucks hauling materials to or from the site generate construction-period vibration impacts.

The Noise and Vibration Impact Analysis (Appendix K) uses vibration standards in the FTA Manual to analyze ground-borne vibration impacts on human annoyance. The Analysis discusses the level of human annoyance using vibration levels in VdB and assesses the potential for building damages using vibration levels in PPV (in/sec). Vibration levels calculated in VdB are best for characterizing human response to building vibration, while vibration level in PPV is best for characterizing potential for damage. The FTA guidelines indicated that for a non-engineered timber and masonry building, the construction vibration damage criterion is 0.2 in/sec in PPV. The threshold at which vibration levels would result in annoyance would be 78 VdB for daytime residential uses and 84 VdB for office type uses. Table N-8 shows the PPV and VdB values at 25 feet from the construction vibration source.

Table N-8: Vibration Source Amplitudes for Construction Equipment

Equipment	Reference PPV/L_v at 25 ft	
	PPV (in/sec)	L_v (VdB)[1]
Pile Driver (Impact), Typical	0.644	104
Pile Driver (Sonic), Typical	0.170	93
Vibratory Roller	0.210	94
Hoe Ram	0.089	87
Large Bulldozer[2]	**0.089**	**87**
Caisson Drilling	0.089	87
Loading Trucks[2]	**0.076**	**86**
Jackhammer	0.035	79
Small Bulldozer	0.003	58

[1] RMS vibration velocity in decibels (VdB) is 1 µin/sec.
[2] Equipment shown in **bold** is expected to be used on site.
µin/sec = microinches per second; ft = foot/feet; in/sec = inch/inches per second; L_v = velocity in decibels; PPV = peak particle velocity; VdB = vibration velocity decibels
Source: Noise and Vibration Impact Analysis (Appendix K)

Table N-9 shows the summary of vibration annoyance levels due to construction equipment at each of the closest receptors. As shown in Table N-9, vibration levels are expected to approach 64 VdB at the closest industrial use to the south which is below the 84 VdB annoyance threshold for office type uses.

Table N-9: Potential Construction Vibration Annoyance Impacts at Nearest Receptor

Receptor (Location)	Reference Vibration Level (VdB) at 25 feet[1]	Distance (feet)[2]	Vibration Level (VdB)
Industrial (south)	87	320	64
Industrial (east)		370	55
Residence (south)		400	49
Industrial (west)		420	49

[1] The reference vibration level is associated with a large bulldozer which is expected to be representative of the heavy equipment used during construction.
[2] The reference distance is associated with the average condition, identified by the distance from the center of construction activities to surrounding uses
VdB = vibration velocity decibels
Source: Noise and Vibration Impact Analysis (Appendix K)

Table N-10 shows the summary of potential construction damage due to construction equipment at each of the closest receptors.

Table N-10: Potential Construction Vibration Damage Impacts at Nearest Receptor

Receptor (Location)	Reference Vibration Level (PPV) at 25 feet[1]	Distance (feet)[2]	Vibration Level (PPV)
Industrial (south)	0.089	5	0.352
Industrial (east)		5	0.352
Residence (south)		95	0.012
Industrial (west)		80	0.016

[1] The reference vibration level is associated with a large bulldozer which is expected to be representative of the heavy equipment used during construction.
[2] The reference distance is associated with the average condition, identified by the distance from the center of construction activities to surrounding uses
PPV = peak particle velocity
Source: Noise and Vibration Impact Analysis (Appendix K)

The closest structures to the Project site are the industrial uses to the south and east of the site, approximately 5 feet from the limits of construction activity. As shown in Table N-10, it is expected that vibrations levels generated by dump trucks and other large equipment that would be as close as 5 feet from the property line would generate groundborne vibration levels of up to 0.352 PPV (in/sec) at the closest structure to the Project site. As such, this vibration level would exceed the 0.2 PPV (in/sec) threshold considered safe for non-engineered timber and masonry buildings. Therefore, the Project has been designed so that the use of heavy construction equipment (e.g., large bulldozers, dump trucks, and vibratory roller) would be prohibited from operating within 15 feet of existing adjacent structures to ensure that vibration levels are below the 0.2 PPV (in/sec) threshold (see PDF N-1). At 15 feet, dump trucks and other large equipment would generate ground-borne vibrations levels of up to 0.191 PPV (in/sec) at the closest structure to the Project site and would not exceed the 0.2 PPV (in/sec) threshold (Appendix H).

If heavy equipment is necessary within 15 feet of the east boundary of the Project site, consistent with TOP 2050 SEIR Mitigation Measure 12-2, specific construction related requirements would be implemented to reduce potential impacts associated with construction vibration. With the implementation of limiting heavy equipment within 15 feet of the eastern Project boundary, vibration levels would be less than significant.

Additionally, as discussed above, construction activities are regulated by the City's Municipal Code, which states that temporary construction, maintenance, or demolition activities are not allowed between 6:00 p.m. and 7:00 a.m. on weekdays, including Saturday and Sunday. As such, vibration impacts would not occur during sensitive nighttime hours. With the implementation of the above practices, vibration impacts would be less than significant.

Operation

Once operational, the Project would not be a significant source of groundborne vibration. Groundborne vibration surrounding the Project currently result from heavy-duty vehicular travel (e.g., refuse trucks, heavy duty trucks, delivery trucks, and transit buses) on the nearby local roadways. Operations of the Project would include passenger cars and trucks. Due to the rapid drop-off rate of ground-borne vibration and the short duration of the associated events, vehicular traffic-induced ground-borne vibration is rarely perceptible beyond the roadway right-of-way, and rarely results in vibration levels that cause damage to buildings in the vicinity. Therefore, the Project would result in no new impacts related to ground born vibration.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. The Project is consistent with the impacts identified in TOP 2050 SEIR and the level of impact remains unchanged from that cited in TOP 2050 SEIR.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR determined impacts related to exposing sensitive receptors to airport noise would be significant and unavoidable.

Airport-related noise levels are primarily associated with aircraft engine noise made while aircraft are taking off, landing, or running their engines while still on the ground. The Project site is located approximately 0.5-mile west of Ontario International Airport (ONT). According to Exhibit 9-1[10] of the ONT Land Use Compatibility Plan (ONT LUCP), the Project site is located within the 65 dBA CNEL contour zone. However, as shown in Table N-1, the ambient noise level in the vicinity of the Project site is 66.1 dBA CNEL. Furthermore, as shown in Table 2-3, *Noise Criteria*[11], of the ONT LUCP, levels up to 70 dBA CNEL are considered to be acceptable for warehouse uses. Therefore, the proposed Project would not be subject to excessive noise levels. Additionally, there are no helipads or private airstrips within 2 miles from the Project area. Therefore, impacts would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. The Project is consistent with the impacts identified in TOP 2050 SEIR and the level of impact remains unchanged from that cited in TOP 2050 SEIR.

Conclusion

Based on the foregoing, none of the conditions identified in State CEQA Guidelines Section 15162 that would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to

[10] Ontario International Airport Land Use Compatibility Plan, Exhibit 1-9, Compatibility Factors: Noise. Available at: https://www.ont-iac.com/wp-content/uploads/2019/02/ONT-compatibility-Exhibit-1-9-July-2018-Amendment.pdf
[11] Ontario International Airport Land Use Compatibility Plan, Table 2-3, Noise Criteria. Available at: https://www.ont-iac.com/wp-content/uploads/2019/02/ALUCP-Chap-2-Table-2-3-Noise-Criteria-Amendment-July-2018-Final-Doc.pdf

evaluate Project impacts or mitigation measures exist regarding noise. There have not been 1) changes related to development of the Project site that involve new significant environmental effects or a substantial increase in the severity of previously identified effects; 2) substantial changes with respect to the circumstances under which development of the Project site is undertaken that require major revisions of TOP 2050 SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified effects; or 3) the availability of new information of substantial importance relating to significant effects or mitigation measures or alternatives that were not known and could not have been known when TOP 2050 SEIR was certified as completed.

Because none of the conditions identified in State CEQA Guidelines Section 15162 would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts, State CEQA Guidelines 15168 also does not require additional environmental review.

Regulatory Requirements (RRs)

RR N-1: Municipal Code Section 5-29.09 (Construction activity noise regulations). Noise sources associated with construction, repair, remodeling, or grading of any real property, shall not take place on any weekday except between the hours of 7:00 am and 6:00 pm or on Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m.

Project Design Features (PDFs)

PDF N-1: Construction Plans. Prior to issuance of grading permits, the Building Department shall ensure all construction plans include a note that the following construction equipment shall not be operated within 15 feet of existing structures: large bulldozers, dump trucks, and vibratory rollers.

Mitigation/Monitoring Required

No new impacts nor substantially more severe noise and vibration related impacts would result from the Project; therefore, no new or revised mitigation measures are required for noise or vibration.

TOP 2050 SEIR Mitigation Measures Applicable to the Project

Mitigation Measure 12-2 Prior to issuance of a building permit, individual projects that involve vibration-intensive construction activities, such as pile drivers, jack hammers, and vibratory rollers near sensitive receptors shall be evaluated for potential vibration impacts. For construction within 135 feet of fragile structures, such as historical resources, within 100 feet of nonengineered timber and masonry buildings (e.g., most residential buildings), or within 75 feet of engineered concrete and masonry (no plaster); or a vibratory roller within 25 feet of any structure, the project applicant shall prepare a noise and vibration analysis to assess and mitigate potential noise and vibration impacts related to these activities. This noise and vibration analysis shall be conducted by a qualified and experienced acoustical consultant or engineer. The vibration levels shall not exceed Federal Transit Administration (FTA) architectural damage thresholds (e.g., 0.12 inches per second [in/sec] peak particle velocity [PPV] for fragile or historical resources, 0.2 in/sec PPV for nonengineered timber and masonry buildings, and 0.3 in/sec PPV for engineered concrete and masonry). If vibration levels would exceed this threshold, alternative uses shall be used, such as drilling piles as opposed to pile driving and static rollers as opposed to vibratory rollers. If necessary, construction vibration monitoring shall be conducted to ensure vibration thresholds are not exceeded.

Status: Applicable to the Project.

b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☐	☒

Summary of Impacts Identified in TOP 2050 SEIR

TOP 2050 SEIR analyzed impacts related to population growth and housing in Section 5.14. TOP 2050 SEIR determined that the project would directly result in population growth in Ontario. TOP 2050 SEIR determined that building of TOP 2050 would not displace people or housing and would not necessitate the construction of replacement housing. Overall, TOP 2050 SEIR determined impacts related to population and housing would be less than significant upon implementation of regulatory requirements and standard conditions of approval.

TOP 2050 SEIR Mitigation Measures:

None.

a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR concluded that buildout of TOP 2050 would directly result in population growth, however TOP 2050 would accommodate future growth by providing for infrastructure and associated public services. Therefore, impacts would be less than significant.

The Project would involve the demolition of the existing six structures onsite and development of two new warehouse buildings totaling 237,236 SF. According to SCAG, the generation rate for employees required for operation of an industrial project is one employee for every 1,195 SF of industrial space. As the Project would build and operate two warehouse buildings totaling 237,236 SF at an FAR of 0.54, operation of the Project would generate approximately 199 employees. TOP 2050 SEIR analyzed the development of approximately 240,778 SF of general industrial uses on the Project site at an FAR of 0.55. As such, TOP 2050 has assumed the employees needed to operate these general industrial uses.

According to SCAG's 2020-2045 RTP/SCS population and household growth forecast for Ontario, between 2016 and 2045, SCAG anticipates an employment increase of 55,400 additional jobs (from 113,900 to 169,300), yielding a 48.6 percent growth rate. SCAG also anticipates a population increase of 96,600 between 2016 and 2045 (from 172,200 to 269,100). The proposed Project would generate approximately

199 new employees, which is within the City's forecasted population and employment growth between 2016 and 2045. Furthermore, the Project represents approximately 0.21 percent of the forecasted population growth between 2016 and 2045 and approximately 0.36 percent of the forecasted employment growth between 2016 and 2045 for the City.

The employees that would fill these roles are anticipated to come from the region, as the unemployment rate of the City of Ontario in August 2022 was 3.6 percent, the City of Upland was 3.6 percent, and the City of Chino was at 3.5 percent (State Employment Development Department 2022). Due to these levels of unemployment, it is anticipated that new employees at the Project site would already reside within commuting distance and would not generate needs for any housing. In addition, should the Project require employees to relocate to the area for work, there is sufficient vacant housing available within the region. The City of Ontario has a vacancy rate of 3.6 percent. Ontario has a total of 54,918 housing units; 52,950 of which are occupied (California Department of Finance 2022). Therefore, impacts related to unplanned population growth from the Project would be less than significant.

Furthermore, the Project is located in an urbanized area of Ontario and is surrounded by industrial and commercial uses. The Project does not propose to expand surrounding utility infrastructure (e.g., water, electricity, cell tower, gas, sanitary sewer, and stormwater drains) in the Project vicinity. All onsite systems would be provided and maintained by the property owner, as well as connect to existing and planned infrastructure within adjacent roadways. Because the Project proposes development in an already built-out portion of the city, it would not indirectly induce population growth through the extension of roads or other infrastructure and impacts would be considered less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. The Project is consistent with the impacts identified in TOP 2050 SEIR and the level of impact remains unchanged from that cited in TOP 2050 SEIR.

b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR concluded that impacts related to displacement of housing would be less than significant.

The Project site is currently developed with an RV and Boat Storage facility and does not contain any housing, nor has it historically been used for housing. The Project site has a General Plan land use designation of Industrial and a zoning designation of General Industrial, which do not provide for residential development. Therefore, the Project would not displace any housing and would not necessitate the construction of replacement housing. As a result, no impact would occur.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. The Project is consistent with the impacts identified in TOP 2050 SEIR and the level of impact remains unchanged from that cited in TOP 2050 SEIR.

Conclusion

Based on the foregoing, none of the conditions identified in State CEQA Guidelines Section 15162 that would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts or mitigation measures exist regarding population and housing. There have not been 1) changes related to development of the Project site that involve new significant environmental effects or a substantial increase in the severity of previously identified effects; 2) substantial changes with respect

to the circumstances under which development of the Project site is undertaken that require major revisions of TOP 2050 SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified effects; or 3) the availability of new information of substantial importance relating to significant effects or mitigation measures or alternatives that were not known and could not have been known when TOP 2050 SEIR was certified as completed.

Because none of the conditions identified in State CEQA Guidelines Section 15162 would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts, State CEQA Guidelines 15168 also does not require additional environmental review.

Regulatory Requirements (RRs)

None.

Project Design Features (PDFs)

None.

Mitigation/Monitoring Required

No new impacts nor substantially more severe population and housing impacts would result from implementation of the Project; therefore, no new or revised mitigation measures are required for population and housing.

5.15 PUBLIC SERVICES	Subsequent or Supplemental EIR			Addendum to EIR	
a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:	Substantial Change in Project or Circumstances Resulting in New Significant Effects	New Information Showing Greater Significant Effects than Previous EIR	New Mitigation or Alternative to Reduce Significant Effect is Declined	Minor Technical Changes or Additions	No New Impact/ No Impact
Fire protection?	☐	☐	☐	☐	☒
Police protection?	☐	☐	☐	☐	☒
Schools?	☐	☐	☐	☐	☒
Parks?	☐	☐	☐	☐	☒
Other public facilities?	☐	☐	☐	☐	☒

Summary of Impacts Identified in TOP 2050 SEIR

TOP 2050 SEIR analyzed impacts related to public services were analyzed in Section 5.13. TOP 2050 SEIR determined that buildout of the project would result in an increase in development and population, which would result in increased demand on fire protection and police services. However, without a definitive location for the development of future facilities, the analysis of potential impacts is too speculative to conduct. TOP 2050 SEIR concluded that the need for additional structures and personnel would be financed through the City's development impact fee program, and the impacts of the project on fire and police services would be less than significant.

TOP 2050 SEIR determined buildout of the project would generate new students who would impact the school enrollment capacities of area schools, and construction of new schools and/or classroom facilities for additional students generated by buildout of the project would be accommodated through assessment of school impact fees. Therefore, impacts to school services would be less than significant with the payment of school impact fees.

TOP 2050 determined that buildout of the project would result in an increase in demand for library services in the City of Ontario based on an increase in population and that new facilities, books, and personnel would be necessary to maintain and reach adequate levels of service. However, since the payment of development impact fees would offset the costs associated with new library services, impacts on library services would be less than significant.

Impacts related to park services are discussed further in Section 5.16.

TOP 2050 SEIR Mitigation Measures:

None.

a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:

i. Fire Protection and Emergency Services

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR concluded that the need for additional structures and personnel would be financed through the City's development impact fee program, and the impacts of the project on fire services would be less than significant.

Fire protections services would be provided by the City of Ontario Fire Department (OFD), which operates ten fire stations throughout the City. Ontario Fire Department, located at 425 East B Street, is the closest fire station to the Project site at 0.8 miles northwest. Ontario Fire Department Station 2 is located approximately 1.6 miles southwest from the Project site. As discussed previously, TOP 5050 SEIR assumed operation of approximately 240,778 SF of general industrial uses on the site would require 202 employees while operation of the proposed warehouse buildings totaling 237,236 SF would require 199 employees. Thus, the proposed warehouse buildings would require three fewer employees than what was assumed in TOP 2050 SEIR. Therefore, implementation of the proposed Project would not increase demand for fire protection and emergency medical services as compared to TOP 2050 SEIR. Additionally, there are two fire stations two miles of the Project site that currently serve the Project vicinity. As part of the permitting process, the Project plans would be reviewed by the City's Fire Department and the Building Department to ensure that the Project plans meet the fire protection requirements. Additionally, the proposed facility would be required to comply with City fire suppression standards including current CBC and would provide adequate fire access. In addition, development impact fees (DIF) would also be collected in order to build and supply necessary infrastructure for fire protection services, as necessary. As such, the increase in fire service demands from the Project would not require construction of a new or physically altered fire station that could cause environmental impacts. Therefore, impacts related to fire protection services would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

ii. Police Protection

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR concluded that the need for additional structures and personnel would be financed through the City's development impact fee program, and the impacts of the project on police services would be less than significant.

Police protection services are provided by the Ontario Police Department (OPD). The station, which would serve the Project site, is located approximately 2.98 miles away from the Project site at 2500 S Archibald Ave, Ontario, CA 91761. The Project would result in additional onsite employees and goods that could create the need for police services. Crime and safety issues during Project construction may include theft of building materials and construction equipment, malicious mischief, graffiti, and vandalism. Operation of the proposed warehouse buildings would generate a typical range of police service calls such as burglaries, thefts, and employee disturbances, similar to the use analyzed in TOP 2050 SEIR and the existing use. The Project would include security lighting and other security measures. In addition, DIF would also be collected in order to build and supply necessary infrastructure for police protection services, as necessary. The additional need for law enforcement services from the Project would not be significant compared to the use analyzed in TOP 2050 SEIR and the existing use and would not result in the need for new or physically altered police facilities. Thus, impacts related to police services would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

iii. School Services

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR determined impacts to school services would be less than significant with the payment of school impact fees.

The Project consists of two warehouse buildings that would not directly generate students. As described previously, the Project is not anticipated to generate a new population, as the employees needed to operate the Project are anticipated to come from within the Project region and substantial in-migration of employees that could generate new students is not anticipated to occur. Thus, the Project would not generate the need for new or physically altered school facilities and impacts would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

iv. Parks

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR determined impacts related to parks would be less than significant.

The Project would build two warehouse buildings on a site that is currently developed with an RV and Boat Storage facility and would not construct any residential facilities, nor create an additional need for housing. Additionally, the employees needed to operate the project are anticipated to come from the labor force in the region. While employees may use public recreational facilities in the area, the Project would not generate a significant increase in use of the existing neighborhood or regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. The Project does not include or require the construction or expansion of recreational facilities which could negatively impact the environment. In addition, no offsite parks or recreational improvements are proposed or required as part of the Project. Thus, impacts would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

v. Other Public Facilities

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR determined impacts to library services would be less than significant with the payment of school impact fees.

As previously discussed, development of the Project would not result in a direct increase in the population of the Project area and would not increase the demand for public services, including public health services and library services which would require the construction of new or expanded public facilities. As described previously, the employees needed to operate the Project are anticipated to come from the Project region and commute Project site and substantial in-migration of employees that could generate substantial usage of other public facilities is not anticipated to occur. Therefore, impacts related to other public services would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

Conclusion
Based on the foregoing, none of the conditions identified in State CEQA Guidelines Section 15162 that would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts or mitigation measures exist regarding public services. There have not been 1) changes related to development of the Project site that involve new significant environmental effects or a substantial increase in the severity of previously identified effects; 2) substantial changes with respect to the circumstances under which development of the Project site is undertaken that require major revisions of TOP 2050 SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified effects; or 3) the availability of new information of substantial importance relating to significant effects or mitigation measures or alternatives that were not known and could not have been known when TOP 2050 SEIR was certified as completed.

Because none of the conditions identified in State CEQA Guidelines Section 15162 would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts, State CEQA Guidelines 15168 also does not require additional environmental review.

Regulatory Requirements (RRs)

None.

Project Design Features (PDFs)

None.

Mitigation/Monitoring Required

No new impacts nor substantially more severe public services impacts would result from implementation of the Project; therefore, no new or revised mitigation measures are required for public services.

5.16 RECREATION	Subsequent or Supplemental EIR			Addendum to EIR	
Would the project:	Substantial Change in Project or Circumstances Resulting in New Significant Effects	New Information Showing Greater Significant Effects than Previous EIR	New Information Identifying New Mitigation or Alternative to Reduce Significant Effect is Declined	Minor Technical Changes or Additions	No New Impact/ No Impact
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☐	☐	☒
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☐	☐	☒

Summary of Impacts Identified in TOP 2050 SEIR

TOP 2050 SEIR analyzed impacts related to recreation in Section 5.16. TOP 2050 SEIR determined that implementation of TOP 2050 would generate additional residents that would increase the use of existing park and recreational facilities, but park dedications and payment of in-lieu fees would ensure impacts are less than significant. TOP 2050 SEIR also determined that project implementation would result in environmental impacts to provide new and/or expanded recreational facilities but would not result in a significant impact as subsequent environmental review would be required for development of park projects under TOP 2050 Land Use Plan.

TOP 2050 SEIR Mitigation Measures:

None.

a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that physical deterioration of the facility would be accelerated?

Impacts Associated with the Proposed Project

No New Impact. The Project would build two warehouse buildings on a site that is currently developed with an RV, Boat and Storage facility. As previously discussed, the Project does not propose any residential facilities, and would not cause an increase in residential population. Additionally, the employees needed to operate the Project are anticipated to come from the labor force in the region. The closest park to the Project site is the Bon View Park, located approximately 0.27-mile south of the Project site. Project employees may use the park for breaks or recreation; however, the use of the park by Project employees would not lead to a physical deterioration of the park. Thus, there would be no increase in residents which would cause any increase in demand for existing parks or other recreational facilities, and the Project would not cause nor accelerate physical deterioration of these facilities.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

b) Require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

Impacts Associated with the Proposed Project

No New Impact. The Project would build two warehouse buildings on a site that is currently developed with an RV, Boat and Storage facility, and would not construct any residential facilities, nor create an additional need for housing. The Project would not directly increase the residential population of the City or generate additional need for parkland. The Project does not include or require the construction or expansion of recreational facilities which could negatively impact the environment, and no offsite parks or recreational improvements are proposed or required as part of the Project. Thus, no impacts would occur.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. Impacts from the Project would be consistent with those identified in TOP 2050 SEIR.

Conclusion
Based on the foregoing, none of the conditions identified in State CEQA Guidelines Section 15162 that would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts or mitigation measures exist regarding recreation. There have not been 1) changes related to development of the Project site that involve new significant environmental effects or a substantial increase in the severity of previously identified effects; 2) substantial changes with respect to the circumstances under which development of the Project site is undertaken that require major revisions of TOP 2050 SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified effects; or 3) the availability of new information of substantial importance relating to significant effects or mitigation measures or alternatives that were not known and could not have been known when TOP 2050 SEIR was certified as completed.

Because none of the conditions identified in State CEQA Guidelines Section 15162 would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts, State CEQA Guidelines 15168 also does not require additional environmental review.

Regulatory Requirements (RRs)

None.

Project Design Features (PDFs)

Would the project:					
a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☐	☐	☐	☐	☒
b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	☐	☐	☒
c) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☐	☐	☒
d) Result in inadequate emergency access?	☐	☐	☐	☐	☒

This section is based on the Vehicle Miles Traveled Analysis prepared by Urban Crossroads in December 2022 and included as Appendix L.

Summary of Impacts Identified in TOP 2050 SEIR

TOP 2050 SEIR discussed impacts related to traffic and circulation in Section 5.17. TOP 2050 SEIR determined implementation of TOP 2050 would not conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. Impacts would be less than significant.

TOP 2050 SEIR determined implementation of TOP 2050 would generate an increase in total VMT compared to TOP 2010. TOP 2050 includes goals and policies to offset Vehicle Miles Traveled (VMT) impacts by creating greater access to transit and enhanced alternative transportation modes. However, even with the additional goals, policies, and actions related to VMT reduction, TOP 2050 is not anticipated to reduce the impact of increased total VMT, even with mitigation. Impacts would be significant and unavoidable.

TOP 2050 SEIR determined the Mobility Element adequately addresses potentially hazardous conditions, potential conflicting uses, and emergency access. Additionally, future projects are required to be reviewed by the Ontario Fire Department to determine adequate emergency access is provided based on local and state guidance. Impacts would be less than significant.

TOP 2050 SEIR Mitigation Measures

Mitigation Measure T-1. Prior to approval of discretionary projects subject to VMT reduction analysis, applicants shall demonstrate compliance with the City's VMT Guidelines for CEQA assessment of VMT impacts. For projects with VMT per Service Population exceeding the County's significance threshold, a mitigation plan shall be developed and implemented. Mitigation should consist of Transportation Demand Management (TDM) measures analyzed under a VMT-reduction methodology consistent with the California Air Pollution Control Officers Association's (CAPCOA) Final Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity (2021) and approved by the City of Ontario (if applicable). Examples of measures include but are not limited to:

- Pedestrian Network Improvements: constructing new sidewalks and/or improving damaged or substandard sidewalks that connect to a larger pedestrian network.
- Construct or Improve Bike Facilities: constructing new or enhancing a single existing Class I, II or IV bike facility that connects to a larger bike network.
- Construct or Improve Bike Boulevards: implementing a Class III bike boulevard on a local or collector street that is one travel lane in each direction, has a design speed of 25 mph or less and a design volume of 5,000 ADT or less.
- Expand Bikeway Networks: constructing a network of interconnected new Class I, II, or IV bike facilities.
- Provide End of Trip Bicycle Facilities: constructing facilities that support cyclists such as bike parking, lockers, and showers.
- Implement Transit-Supportive Roadway Treatments: funding infrastructure improvements such as traffic signal modifications and roadway signing and striping that are dedicated to improving transit travel times and reliability.
- Transit Passes: proving discounted or free transit fare to a specific geographic area, population group, or to the general public.
- Vanpool Program: providing groups of 5 to 15 people with direct shuttle service between their workplace and residence.
- Carshare Program (conventional or EV): providing access to a shared fleet of on-demand vehicles for short-term use/rental. Best practice is to discount carshare membership and provide priority parking for carshare vehicles to encourage use of the service.
- Bikeshare Program (conventional or EV): providing access to a shared fleet of on-demand bicycles for short-term use/rental. Best practice is to discount bikeshare membership and dedicate bikeshare parking to encourage use of the service.
- Rideshare Program: providing access to and encouraging the use of a ridesharing platform or service. This could be an app, website, or other service that provides ride-matching coordination services.
- Community-Based Travel Planning (CBTP): CBTP is a residential based approach to outreach, performed by trained advisors, that provides households within a targeted geographic area with customized information, incentives, and support to encourage the use of transportation alternatives in place of single occupancy vehicles.
- Commute Trip Reduction (CTR) Program: CTR programs can be mandatory or voluntary, and involve providing information, coordination, services, infrastructure, and/or incentives for alternative modes such as ridesharing, vanpool, transit passes, and cycling.

a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR determined implementation of TOP 2050 would not conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. Impacts would be less than significant.

Vehicular access to Building 1 would be provided via four driveways: two on Bon View Avenue and two on Ontario Boulevard. Vehicular access to Building 2 would be provided via one driveway on California Street. Vehicular traffic to and from the Project site would utilize the existing network of regional and local

roadways that currently serve the Project area. The Project would construct internal roadways that would provide employee access to the building. In addition, final design plans would be subject to review and approval by the City's Public Works Department prior to the issuance of building permits.

Additionally, as shown in Table LU-1 in Section 5.11, *Land Use and Planning*, the Project would be consistent with circulation goals and policies included as part of TOP 2050. As such, the Project would not introduce any new roadways or land uses that would interfere with adopted plans, programs, ordinances, or policies regarding roadway facilities.

Alternative Transportation
Sidewalks currently exist along the Project site's Ontario Boulevard, Bon View Avenue and California Street frontages and would not be changed with implementation of the Project. According to TOP Figure M-02, *Multipurpose Trails and Bikeways*, Class III bike routes are proposed along Bon View Avenue and buffered Class II bike lanes are proposed along Mission Boulevard. The proposed Project would not interfere with future implementation of these proposed bike routes. The Metrolink Riverside Line is located adjacent to Ontario Boulevard. East Ontario Metrolink Station is located approximately 3.3 miles east. Additionally, Omnitrans Bus Route 87 exists along Mission Boulevard, just south of the Project site. The Project would not disrupt service of the Metrolink Line nor Omnitrans Route 87. Therefore, the Project would not conflict with alternative transportation and Project impacts to transit, bicycle, and pedestrian facilities would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. The Project is consistent with the impacts identified in TOP 2050 SEIR and the level of impact remains unchanged from that cited in TOP 2050 SEIR.

b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR determined implementation of TOP 2050 would generate an increase in total VMT compared to TOP 2010 and impacts would remain significant an unavoidable even after implementation of mitigation.

Changes to CEQA Guidelines were adopted in December 2018, which require all lead agencies to adopt VMT as a replacement for automobile delay-based level of service (LOS) as the measure for identifying transportation impacts for land use projects. This statewide mandate went into effect July 1, 2020. To aid in this transition, the Governor's Office of Planning and Research (OPR) released a Technical Advisory on Evaluating Transportation Impacts in CEQA (December of 2018) (Technical Advisory). Based on OPR's Technical Advisory and its specific procedures for complying with the new CEQA requirements for VMT analysis, the City of Ontario has developed and adopted their own VMT methodologies and thresholds, which were adopted by City Council in June 2020 (City Guidelines).

The City Guidelines describe specific "screening thresholds" that can be used to identify when a proposed land use project is anticipated to result in a less than significant impact without conducting a more detailed project level VMT analysis. Consistent with City Guidelines, a land use project needs only to satisfy one of the screening thresholds to result in a less than significant impact. Project consistency with screening thresholds is described below.

1. Transit Priority Area (TPA) Screening

City Guidelines state that projects located within a TPA (i.e. within one-half mile of an existing "major transit stop" or an existing stop along a "high-quality transit corridor") may be presumed to have a less than significant impact unless one of the following conditions is met:

- Has a Floor Area Ratio (FAR) of less than 0.75;
- Includes more parking for use by residents, customers, or employees of the project than required by the jurisdiction (if the jurisdiction requires the project to supply parking);
- Is inconsistent with the applicable Sustainable Communities Strategy (as determined by the lead agency, with input from the Metropolitan Planning Organization); or
- Replaces affordable residential units with a smaller number of moderate- or high-income residential units.

The Project site is located within a TPA; however, the Project has a FAR of less than 0.75, thus this screening criteria is not met.

2. Low VMT Area Screening
   City Guidelines state that projects located in an already low VMT generating traffic analysis zone (TAZ) may be presumed to have a less than significant VMT impact. TAZs that generate a VMT per service population (SP) that is 15 percent below the County of San Bernardino Baseline VMT per SP are considered low VMT.

   The Project is located in TAZ 53649401 and was found to have a VMT per service population of 78.2 that was compared to 15 percent below County of San Bernardino Baseline or 33.3 VMT per SP. Accordingly, the Project is not located within a low VMT generating zone. Thus, this screening criteria is not met.

3. Project Type Screening
   City Guidelines identify local serving retail with buildings less than 50,000 square feet or other local serving essential services as having a less than significant VMT impact. The proposed Project does would not develop any local serving retail or essential land use services. Thus, this screening criteria is not met.

4. Low Trip Generating Uses Screening
   City Guidelines state that land use projects generating 110 or fewer daily vehicle trips are assumed to cause a less than significant impact on VMT.

Table T-1 shows the trip generation comparison between the VMT baseline (77,696 SF of General Industrial (IG) consistent uses) and proposed Project (237,236 SF of warehouse uses).

Table T-1: Trip Generation Comparison

	AM Peak Hour			PM Peak Hour			
	In	Out	Total	In	Out	Total	Daily
Baseline	53	8	61	8	47	55	454
Proposed Project	54	11	65	15	51	66	554
Difference	1	3	4	7	4	11	100

Source: Vehicle Miles Traveled Analysis (App L)

As shown, the proposed Project is anticipated to generate 100 net new trips per day compared to the VMT baseline, which is below the threshold of 110 additional vehicle trips per day. Thus, the Low Trip Generating

Uses Screening criteria is met. Furthermore, the proposed 237,236 SF building would generate fewer trips compared to the 240,778 SF building previously analyzed in the TOP SEIR.

Therefore, since the proposed Project would generate fewer than 110 additional vehicle trips per day and is consistent with the City's screening criteria, the Project would have a less than significant impact on VMT.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. The Project is consistent with the impacts identified in TOP 2050 SEIR and the level of impact remains unchanged from that cited in TOP 2050 SEIR.

c) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR concluded that impacts related to an increase in hazards due to design features would be less than significant.

Vehicular access to Building 1 would be provided via four driveways: two on Bon View Avenue and two on Ontario Boulevard. Vehicular access to Building 2 would be provided via one driveway on California Street. Vehicular traffic to and from the Project site would utilize the existing network of regional and local roadways that currently serve the Project area. The Project would not introduce any new roadways or introduce a land use that would conflict with existing urban land uses in the surrounding area. Design of the Project, including the internal circulation, is subject to the City's development standards. The proposed Project's design has been reviewed to ensure fire engine accessibility and turn around area is provided to the fire code standards. As a result, impacts related to vehicular circulation design features would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. The Project is consistent with the impacts identified in TOP 2050 SEIR and the level of impact remains unchanged from that cited in TOP 2050 SEIR.

d) Result in inadequate emergency access?

Impacts Associated with the Proposed Project

No New Impact.

Construction

The proposed construction activities, including equipment and supply staging and storage, would occur within the Project site, and would not restrict access of emergency vehicles to the Project site or adjacent areas. The repaving of existing driveways, connections to existing infrastructure systems, and construction of new infrastructure that would be implemented during construction of the Project could require the temporary closure of one side or portions of Bon View Avenue, Ontario Boulevard, and/or California Street for a short period of time (i.e., hours or a few days). However, the construction activities would be required to ensure emergency access in accordance with Section 503 of the California Fire Code (Title 24, California Code of Regulations, Part 9), which would be ensured through the City's permitting process. Thus, implementation of

the Project through the City's permitting process would ensure existing regulations are adhered to and would reduce potential construction related emergency access impacts to a less than significant level.

Operation

As described previously, vehicle access to Building 1 would be provided via four driveways: two on Bon View Avenue and two on Ontario Boulevard, and vehicular access to Building 2 would be provided via one driveway on California Street. The construction permitting process would provide adequate and safe circulation to, from, and through the Project area, and would provide routes for emergency responders to access different portions of the Project site. The Fire Department and the Public Works Department would review the development plans as part of the permitting procedures to ensure adequate emergency access pursuant to the requirements in Section 503 of the California Fire Code (Title 24, California Code of Regulations, Part 9), included as Municipal Code Section 4-4.0. Because the Project is required to comply with all applicable City codes, as verified by the City's permitting process, potential impacts related to inadequate emergency access would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. The Project is consistent with the impacts identified in TOP 2050 SEIR and the level of impact remains unchanged from that cited in TOP 2050 SEIR.

Conclusion

Based on the foregoing, none of the conditions identified in State CEQA Guidelines Section 15162 that would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts or mitigation measures exist regarding transportation and traffic. There have not been 1) changes related to development of the Project site that involve new significant environmental effects or a substantial increase in the severity of previously identified effects; 2) substantial changes with respect to the circumstances under which development of the Project site is undertaken that require major revisions of TOP 2050 SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified effects; or 3) the availability of new information of substantial importance relating to significant effects or mitigation measures or alternatives that were not known and could not have been known when TOP 2050 SEIR was certified as completed.

Because none of the conditions identified in State CEQA Guidelines Section 15162 would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts, State CEQA Guidelines 15168 also does not require additional environmental review.

Regulatory Requirements (RRs)

None.

Project Design Features (PDFs)

PDF 1 – Commute Trip Reduction Marketing: The Project would include a marketing strategy to promote the Project site employer's commute trip reduction program. The Project would provide tenant's employees materials and online resources as a means to promote the commute trip reduction program. The purpose of the commute trip reduction program is to educate employees about their travel choices to the employment location beyond driving such as carpooling, taking transit, walking, and biking, thereby reducing VMT.

PDF 2 – Ridesharing Program: The Project would provide a ridesharing program and establish a permanent transportation management association with funding requirements for employers. Ridesharing encourages carpooled vehicle trips in place of single-occupied vehicle trips, thereby reducing the number of trips and VMT.

PDF 3 – End-of-Trip Facilities (Bicycle): The Project would install and maintain end-of-trip bicycle facilities for employee use. These facilities could include bike parking, bike lockers, showers, and personal lockers. The provision and maintenance of secure bike parking and related facilities encourages commuting by bicycle, thereby reducing VMT.

PDF 4 – Employee Parking Cash-Out: The Project would require future tenants to offer employee parking cash-out which would provide employees with a choice of forgoing their current subsidized/free parking for a cash payment equivalent to or greater than the cost of the parking space. This encourages employees to use other modes of travel instead of single occupancy vehicles and thereby reduces VMT and GHG emissions.

Mitigation/Monitoring Required

No new impacts nor substantially more severe transportation impacts would result from implementation of the Project; therefore, no new or revised mitigation measures are required for transportation.

TOP 2050 SEIR Mitigation Measures Applicable to the Project

Mitigation Measure T-1. Prior to approval of discretionary projects subject to VMT reduction analysis, applicants shall demonstrate compliance with the City's VMT Guidelines for CEQA assessment of VMT impacts. For projects with VMT per Service Population exceeding the County's significance threshold, a mitigation plan shall be developed and implemented. Mitigation should consist of Transportation Demand Management (TDM) measures analyzed under a VMT-reduction methodology consistent with the California Air Pollution Control Officers Association's (CAPCOA) Final Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity (2021) and approved by the City of Ontario (if applicable). Examples of measures include but are not limited to:

- Pedestrian Network Improvements: constructing new sidewalks and/or improving damaged or substandard sidewalks that connect to a larger pedestrian network.
- Construct or Improve Bike Facilities: constructing new or enhancing a single existing Class I, II or IV bike facility that connects to a larger bike network.
- Construct or Improve Bike Boulevards: implementing a Class III bike boulevard on a local or collector street that is one travel lane in each direction, has a design speed of 25 mph or less and a design volume of 5,000 ADT or less.
- Expand Bikeway Networks: constructing a network of interconnected new Class I, II, or IV bike facilities.
- Provide End of Trip Bicycle Facilities: constructing facilities that support cyclists such as bike parking, lockers, and showers.
- Implement Transit-Supportive Roadway Treatments: funding infrastructure improvements such as traffic signal modifications and roadway signing and striping that are dedicated to improving transit travel times and reliability.
- Transit Passes: proving discounted or free transit fare to a specific geographic area, population group, or to the general public.
- Vanpool Program: providing groups of 5 to 15 people with direct shuttle service between their workplace and residence.
- Carshare Program (conventional or EV): providing access to a shared fleet of on-demand vehicles for short-term use/rental. Best practice is to discount carshare membership and provide priority parking for carshare vehicles to encourage use of the service.

- Bikeshare Program (conventional or EV): providing access to a shared fleet of on-demand bicycles for short-term use/rental. Best practice is to discount bikeshare membership and dedicate bikeshare parking to encourage use of the service.
- Rideshare Program: providing access to and encouraging the use of a ridesharing platform or service. This could be an app, website, or other service that provides ride-matching coordination services.
- Community-Based Travel Planning (CBTP): CBTP is a residential based approach to outreach, performed by trained advisors, that provides households within a targeted geographic area with customized information, incentives, and support to encourage the use of transportation alternatives in place of single occupancy vehicles.
- Commute Trip Reduction (CTR) Program: CTR programs can be mandatory or voluntary, and involve providing information, coordination, services, infrastructure, and/or incentives for alternative modes such as ridesharing, vanpool, transit passes, and cycling.

Status: This mitigation measure has been satisfied through the preparation of the Project-specific VMT Analysis, prepared by Urban Crossroads in November 2022 and included as Appendix M. With implementation of PDFs outline above, the proposed Project would have a less than significant impact in regard to VMT generation.

5.18 TRIBAL CULTURAL RESOURCES	Subsequent or Supplemental EIR			Addendum to EIR	
Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:	Substantial Change in Project or Circumstances Resulting in New Significant Effects	New Information Showing Greater Significant Effects than Previous EIR	New Information Identifying New Mitigation or Alternative to Reduce Significant Effect is Declined	Minor Technical Changes or Additions	No New Impact/ No Impact
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	☐	☐	☐	☐	☒
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☐	☐	☐	☒

Summary of Impacts Identified in TOP 2050 SEIR

TOP 2050 SEIR analyzed impacts related to tribal cultural resources in Section 5.18. TOP 2050 SEIR determined impacts related to tribal cultural resources would be less than significant with implementation of Mitigation Measures 5-3, 5-4, TCR-1 and TCR-2.

TOP 2050 SEIR Mitigation Measures:

Mitigation Measure 5-3. Upon receipt of an application for a proposed project subject to CEQA and within the City's jurisdiction, the City's representative shall consult with the relevant tribe(s)' representative(s) to determine if the proposed project is within a culturally sensitive area to the tribe. If sufficient evidence is provided to reasonably ascertain that the site is within a tribal culturally sensitive area, an archaeologist shall prepare a cultural resources assessment. The findings of the cultural resources assessment shall be incorporated into the CEQA documentation. A copy of the report shall be forwarded to the tribe(s). If mitigation is recommended in the CEQA document, the procedure described in Mitigation Measure 5-4 shall be followed.

Mitigation Measure 5-4. Prior to the issuance of grading permits for a proposed project which the CEQA document defines cultural resource mitigation for potential tribal resources, the project applicant shall contact the designated tribe(s) to notify them of the grading, excavation, and monitoring program. The applicant shall coordinate with the City of Ontario and the tribal representative(s) to develop mitigation measures that address the designation, responsibilities, and participation of tribal monitors during grading, excavation, and ground-disturbing activities; scheduling; terms of compensation; and treatment and final disposition of any cultural resources, sacred sites, and human remains discovered on the site. The City of Ontario shall be the final arbiter of the conditions for projects within the City's jurisdiction.

Mitigation Measure TCR-1 Tribal Cultural Resources Monitoring. The project archaeologist, in consultation with interested tribes, the developer, and the City of Ontario, shall develop an archaeological monitoring

plan (AMP) to address the details, timing, and responsibility of archaeological and cultural activities that will occur on the project site. Details in the AMP shall include:

1. Project-related ground disturbance (including, but not limited to, brush clearing, grading, trenching, etc.) and development scheduling;
2. The development of a rotating or simultaneous schedule in coordination with the developer and the project archeologist for designated Native American Tribal Monitors from the consulting tribes during grading, excavation and ground disturbing activities on the site: including the scheduling, safety requirements, duties, scope of work, and Native American Tribal Monitors' authority to stop and redirect grading activities in coordination with all project archaeologists (if the tribes cannot come to an agreement on the rotating or simultaneous schedule of tribal monitoring, the Native American Heritage Commission shall designate the schedule for the onsite Native American Tribal Monitor for the proposed project);
3. The protocols and stipulations that the developer, City, Tribes, and project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.

At least 30 days prior to application for a grading permit and before any brush clearance, grading, excavation, and/or ground disturbing activities on the site, the developer shall retain a tribal cultural monitor to monitor all ground-disturbing activities in an effort to identify any unknown archaeological resources. Pursuant to the AMP, a tribal monitor from the consulting tribe shall be present during the initial grading activities. If tribal resources are found during grubbing activities, the tribal monitoring shall be present during site grading activities.

Mitigation Measure TCR-2: Treatment and Disposition of Cultural Resources. In the event that Native American cultural resources are inadvertently discovered during the course of any ground-disturbing activities, including but not limited to brush clearance, grading, trenching, etc., for the proposed project, the following procedures will be carried out for treatment and disposition of the discoveries:

1. Temporary Curation and Storage: During the course of construction, all discovered resources shall be temporarily curated in a secure location on-site or at the offices of the project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversight of the process;
2. Treatment and Final Disposition: The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and nonhuman remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City of Ontario with evidence of same:
    a) Accommodate the process for on-site reburial of the discovered items with the consulting Native American tribes or bands. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloging, basic analysis, other analyses as recommended by the project archaeologist and approved by consulting tribes, and basic recordation have been completed; all documentation should be at a level of standard professional practice to allow the writing of a report of professional quality;
    b) A curation agreement with an appropriate qualified repository in San Bernardino County that meets federal standards per 36 CFR Part 79, and therefore the resource would be professionally curated and made available to other archaeologists/researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility in San Bernardino County, to be accompanied by payment of the fees necessary for permanent curation;
    c) For purposes of conflict resolution, if more than one Native American tribe or band is involved with the project and cannot come to an agreement as to the disposition of cultural materials, materials shall be curated at the San Bernardino County Museum by default;

d) At the completion of grading, excavation, and ground-disturbing activities on the site, a Phase IV Monitoring Report shall be submitted to the City documenting monitoring activities conducted by the project archaeologist and Native Tribal Monitors within 60 days of completion of grading. This report shall document the impacts to the known resources on the property; describe how each mitigation measure was fulfilled; document the type of cultural resources recovered and the disposition of such resources; provide evidence of the required cultural sensitivity training for the construction staff held during the required pregrade meeting; and, in a confidential appendix, include the daily/weekly monitoring notes from the archaeologist. All reports produced will be submitted to the City, County Museum, and consulting tribes.

a) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?

Impacts Associated with the Proposed Project

No New Impact. Assembly Bill (AB) 52 (Chapter 532, Statutes of 2014) establishes a formal consultation process for California tribes as part of the CEQA process and equates significant impacts on "tribal cultural resources" with significant environmental impacts (Public Resources Code [PRC] § 21084.2). AB 52 requires that lead agencies undertaking CEQA review evaluate, just as they do for other historical and archeological resources, a project's potential impact to a tribal cultural resource. In addition, AB 52 requires that lead agencies, upon request of a California Native American tribe, begin consultation prior to the release of a negative declaration, mitigated negative declaration, or EIR for a project. AB 52 does not apply to a Notice of Exemption or Addendum.

On May 9, 2022, a Sacred Lands File (SLF) search was requested from the Native American Heritage Commission (NAHC). On June 9, 2022, the NACH responded stating the results of the search did not identify any potential sites or location of Native American importance within the Project site or vicinity.

The Project site is currently developed with a RV and boat storage facility, parking lot, and storage area. The Project site soils have been previously disturbed from past grading, building construction and installation of utility infrastructure for the existing buildings. Because the site has previously been disturbed, there is reduced potential for the Project to impact tribal cultural resources. However, the Project may result in excavation into the underlying alluvial sediments where undiscovered tribal cultural resources could exist. TOP 2050 SEIR Mitigation Measure TCR-2 requires that in the event Native American cultural resources are inadvertently discovered during the course of any ground-disturbing activities, the resource shall be stored in a secure location until a qualified archaeologist with tribal monitor oversight can evaluate the resource. With implementation of TOP 2050 SEIR Mitigation Measure TCR-2, the Project would not cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 that is a historical resource as defined in Section 15064.5 of the State CEQA Guidelines or PRC Section 5020.1(k) and no new substantial environmental impacts would occur in comparison to the EIR.

The Project site has been previously disturbed, as described above, and has not been previously used as a cemetery. There are no known tribal cultural resources on the site. It is not anticipated that implementation of the Project would result in the disturbance of human remains. However, in the unlikely event that human remains are encountered during earth removal or disturbance activities, the California Health and Safety Code Section 7050.5 (included as RR CUL-1) requires that disturbance of the site shall halt until the coroner has conducted an investigation into the circumstances, manner, and cause of any death, and the

recommendations concerning the treatment and disposition of the human remains have been made to the person responsible for the excavation or to his or her authorized representative. The Coroner would also be contacted pursuant to Sections 5097.98 and 5097.99 of the Public Resources Code relative to Native American remains. In the event the Coroner determines the human remains to be of Native American descent, the coroner has 24 hours to notify the Native American Heritage Commission (NAHC). The NAHC would then be required to contact the most likely descendant of the deceased Native American, who would then serve as a consultant on how to proceed with the remains. Compliance with the established regulatory framework (i.e., California Health and Safety Code Section 7050.5 and Public Resources Code Section 5097.98) would reduce potential impacts involving disturbance to human remains would be less than significant.

With implementation of TOP 2050 SEIR Mitigation Measure TCR-2 and regulatory requirements, the Project would not cause a substantial adverse change in the significance of a tribal cultural resource. Therefore, the Project would not cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 that is a historical resource as defined in Section 15064.5 of the State CEQA Guidelines or PRC Section 5020.1(k) and no new substantial environmental impacts would occur in comparison to TOP 2050 SEIR.

b) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

Impacts Associated with the Proposed Project

No New Impact. As discussed above, there are no known tribal cultural resources that would be affected by the Project. The Project site is currently developed with an RV and boat storage facility, parking lot and storage lot and site soils have been previously disturbed from past grading, building construction and installation of utility infrastructure for the existing building. As discussed previously in Section 5.5, Cultural Resources, due to past grading and construction activities at the Project site, it is likely that any tribal cultural resources have already been destroyed or removed. However, the Project may result in excavation into the underlying alluvial sediments where undiscovered tribal cultural resources could exist. TOP 2050 SEIR Mitigation Measure TCR-2 requires that in the event Native American cultural resources are inadvertently discovered during the course of any ground-disturbing activities, the resource shall be stored in a secure location until a qualified archaeologist with tribal monitor oversight can evaluate the resource. With implementation of TOP 2050 SEIR Mitigation Measure TCR-2, the Project would not cause a substantial adverse change in the significance of a tribal cultural resource defined in Public Resources Code section 21074 determined to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1 and no new substantial environmental impacts would occur in comparison to the EIR.

Additionally, the California Health and Safety Code, Section 7050.5 requires that if human remains are discovered in the Project site, disturbance of the site shall halt and remain halted until the coroner has conducted an investigation. If the coroner determines that the remains are those of a Native American, they shall contact, by telephone within 24 hours, the Native American Heritage Commission. Therefore, impacts to tribal cultural resources would be less than significant and no new substantial environmental impacts would occur in comparison to TOP 2050 SEIR.

Conclusion

Based on the foregoing, none of the conditions identified in State CEQA Guidelines Section 15162 that would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts or mitigation measures exist regarding tribal cultural resources. There have not been 1) changes related to development of the Project site that involve new significant environmental effects or a substantial increase in the severity of previously identified effects; 2) substantial changes with respect to the circumstances under which development of the Project site is undertaken that require major revisions of TOP 2050 SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified effects; or 3) the availability of new information of substantial importance relating to significant effects or mitigation measures or alternatives that were not known and could not have been known when TOP 2050 SEIR was certified as completed.

Because none of the conditions identified in State CEQA Guidelines Section 15162 would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts, State CEQA Guidelines 15168 also does not require additional environmental review.

Regulatory Requirements (RRs)

(See RR CUL-1 in Section 5.5)

Project Design Features (PDFs)

None.

Mitigation/Monitoring Required

No new impacts nor substantially more severe tribal cultural resources impacts would result from implementation of the Project; therefore, no new or revised mitigation measures are required for tribal cultural resources.

TOP 2050 SEIR Mitigation Measures:

Mitigation Measure 5-2 as listed previously in Section 5.5, *Cultural Resources*.

Mitigation Measure TCR-2: Treatment and Disposition of Cultural Resources. In the event that Native American cultural resources are inadvertently discovered during the course of any ground-disturbing activities, including but not limited to brush clearance, grading, trenching, etc., for the proposed project, the following procedures will be carried out for treatment and disposition of the discoveries:

3. Temporary Curation and Storage: During the course of construction, all discovered resources shall be temporarily curated in a secure location on-site or at the offices of the project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversight of the process;
4. Treatment and Final Disposition: The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and nonhuman remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City of Ontario with evidence of same:
    e) Accommodate the process for on-site reburial of the discovered items with the consulting Native American tribes or bands. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloging, basic analysis, other analyses as recommended by the project archaeologist and approved by consulting tribes, and basic recordation have been completed; all documentation should be at a level of standard professional practice to allow the writing of a report of professional quality;

f) A curation agreement with an appropriate qualified repository in San Bernardino County that meets federal standards per 36 CFR Part 79, and therefore the resource would be professionally curated and made available to other archaeologists/researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility in San Bernardino County, to be accompanied by payment of the fees necessary for permanent curation;

g) For purposes of conflict resolution, if more than one Native American tribe or band is involved with the project and cannot come to an agreement as to the disposition of cultural materials, materials shall be curated at the San Bernardino County Museum by default;

h) At the completion of grading, excavation, and ground-disturbing activities on the site, a Phase IV Monitoring Report shall be submitted to the City documenting monitoring activities conducted by the project archaeologist and Native Tribal Monitors within 60 days of completion of grading. This report shall document the impacts to the known resources on the property; describe how each mitigation measure was fulfilled; document the type of cultural resources recovered and the disposition of such resources; provide evidence of the required cultural sensitivity training for the construction staff held during the required pregrade meeting; and, in a confidential appendix, include the daily/weekly monitoring notes from the archaeologist. All reports produced will be submitted to the City, County Museum, and consulting tribes.

5.19 UTILITIES AND SERVICE SYSTEMS	Subsequent or Supplemental EIR			Addendum to EIR	
	Substantial Change in Project or Circumstances Resulting in New Significant Effects	New Information Showing Greater Significant Effects than Previous EIR	New Information Identifying New Mitigation or Alternative to Reduce Significant Effect is Declined	Minor Technical Changes or Additions	No New Impact/ No Impact
Would the project:					
a) Require or result in the construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☐	☐	☒
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	☐	☐	☐	☐	☒
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☐	☐	☒
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☐	☐	☒
e) Comply with federal, state, and local statutes and regulations related to solid waste?	☐	☐	☐	☐	☒

Summary of Impacts Identified in TOP 2050 SEIR

TOP 2050 SEIR analyzed impacts related to utilities and service systems in Section 5.19.

Wastewater: The City of Ontario conveys its wastewater via regional trunk sewers to regional wastewater treatment plants (WWTPs) operated by the Inland Empire Utilities Agency (IEUA). According to TOP 2050 SEIR, the City's wastewater collection system is adequate to convey the additional 2.55 million gallons per day (mgd) that would occur with implementation of TOP 2050 Update. Wastewater treatment in Ontario is provided by two IEUA facilities: RP-1 and RP-5. The current combined capacity of these two facilities is 60.3 mgd and would increase to 66.5 mgd once the expansion project that is currently under construction at RP-5 is completed. In 2020, RP-1 treated an average wastewater flow of 25 mgd, and RP-2 treated an average wastewater flow of 8 mgd (IEUA 2020). Therefore, these two WWTPs have a current combined treatment rate of 33 mgd. Additionally, there are additional plans to increase the treatment capacity of RP-5 to 30 mgd by 2040; the combined treatment capacity of both WWTPs would be 74 mgd (IEUA 2020). Therefore, TOP 2050 SEIR determined wastewater generated by TOP 2050 update could be adequately treated by the IEUA and would not require the construction of new wastewater treatment facilities or the expansion of existing facilities or exceed wastewater treatment requirements of the Regional Water Quality Control Board.

Water Supply and Distribution: The Ontario Municipal Utilities Company (OMUC) provides water service to residents, businesses, and other users in the City. According to TOP 2050 SEIR, full implementation of TOP

2050 has the potential to increase water demand by 3 mgd in the City overall. This accounts for an increase of approximately 6 percent from the current TOP to TOP 2050. Therefore, the City and the IEUA have made plans for infrastructure expansion and improvement. Additionally, as part of the land development approval process, the City determines a project's fair-share costs and connection fees. Through the use of connection fees and agreements, the City maintains and expands its water distribution system as necessary and is able to ensure that new developments pay their fair-share costs. The City has the discretion to require water capacity studies associated with new development and redevelopment and currently requires site-specific studies to determine a project's impact throughout the water system. Therefore, impacts related to infrastructure expansion and improvement caused by the implementation of TOP 2050 would be less than significant.

Additionally, although TOP 2050 at buildout is estimated to generate a 6 percent increase in water demand using conservative water demand factors, new State requirements and City policies and code requirements would result in enhanced water efficiency and conservation. Applying these measures to the current water demand estimates would result in total water demand below the projections in the 2020 UWMP for year 2045. Therefore, there would be sufficient water supplies to meet the demand for TOP 2050 buildout.

Solid Waste: TOP 2050 determined that buildout of TOP 2050 would generate an increase in solid waste of 45,204 tons/year. TOP 2050 SEIR determined solid waste generated through implementation of TOP 2050 would be adequately accommodated by the Badlands Sanitary Landfill and the El Sobrante Landfill. Furthermore, future development pursuant to TOP 2050 would comply with Section 4.408 of the 2019 CALGreen building code, which requires that at least 65 percent of nonhazardous construction and demolition waste from nonresidential construction operations be recycled and/or salvaged for reuse. Development would also comply with AB 341, which mandates recycling for commercial and multifamily residential land uses. Additionally, future businesses that generate organic waste in amounts over a certain threshold would be mandated to recycle organic matter in accordance with AB 1826. Therefore, solid waste facilities would be able to accommodate project-generated solid waste associated with the Proposed Project and impacts would be less than significant.

Stormwater Drainage: TOP 2050 SEIR determined compliance with the City's policies and programs that ensure adequate infrastructure and the regulatory provisions in the MS4 permit that limit runoff from new development would ensure that implementation of TOP 2050 would not result in significant increases in runoff that would contribute to the construction or expansion of new storm drains beyond what is already planned. In addition, the City would continue to repair, rehabilitate, and upgrade the storm drain system through implementation of the CIP program, and potential future development would be required to pay storm drainage fees per the City's municipal code. Therefore, impacts with respect to stormwater infrastructure would be less than significant.

TOP 2050 SEIR Mitigation Measures:

None.

a) Require or result in the construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR concluded that impacts related to the construction or expansion of water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities would be less than significant.

Water
The Ontario Municipal Utilities Company (OMUC) provides water service to residents, businesses, and other users in the City, including to the Project site. The Project would extend the proposed 12-inch water line in Ontario Boulevard west to connect to the existing 8-inch water line in Bon View Avenue. Building 1 would install new onsite water that would connect to the extended 8-inch water line in Ontario Boulevard. Building 2 would install new onsite water lines that connect to the existing 8-inch water line California Street. Installation of the onsite water infrastructure and connection to the existing water supply lines is part of construction of the proposed Project would not result in any physical environmental effects beyond those described throughout this document.

Wastewater
Wastewater generated by the City of Ontario is treated by the Inland Empire Utilities Agency (IEUA). The Project would extend the existing 8-inch sewer line located in Bon View Avenue north to Ontario Boulevard. Building 1 would install new onsite sewer lines that connect to the extended 8-inch sewer line in Bon View Avenue. Building 2 would install new onsite sewer lines that connect to the existing 8-inch sewer line in California Street. Installation of the onsite sewer infrastructure is part of construction of the proposed Project would not result in any physical environmental effects beyond those described throughout this document.

Storm Drainage
Stormwater flows from Building 1 will be collected and conveyed via storm drainpipe into a proposed underground storage chamber. Chamber outflow will be directed to Bon View Avenue via a parkway drain. Bon View Avenue drains to California Street. Stormwater flows from Building 2 will be collected and conveyed via storm drainpipe into a proposed underground storage chamber. Chamber outflows are directed to California street to mimic the existing condition. The existing off-site drainage system is designed and sized appropriately and would be able to accommodate the proposed Project. Thus, the Project would not require or result in the relocation or construction of new or expanded offsite drainage systems. The proposed onsite stormwater drainage infrastructure is included as part of the construction of the proposed Project and would not result in any physical environmental effects beyond those identified in other sections of this document. Therefore, impacts related to drainage infrastructure would be less than significant.

Electricity
Electricity would be provided to the Project by Southern California Edison (SCE). Adequate commercial electricity supplies are presently available to meet the incremental increase in demand attributed to the Project. Provision of electricity to the Project site is not anticipated to require or result in the construction of new facilities or the expansion of existing facilities, the construction or relocation of which would cause significant environmental impacts to electricity. Impacts would be less than significant.

Natural Gas
Natural gas service would be provided by Southern California Gas (SoCal Gas). Adequate commercial gas supplies are presently available to meet the incremental increase in demand attributed to the Project. The proposed Project would not require or result in the construction, expansion, or relocation of natural gas facilities that could result in a significant environmental impact. Impacts related to natural gas would be less than significant.

Telecommunication
Telecommunications service is provided by private companies in the City, including Verizon and AT&T. Private communications company's provide connection to the communication system on an as needed basis. As such, the proposed Project is not anticipated to require or result in the construction of new communications facilities or the expansion of existing facilities. Impacts would be less than significant.

Under existing conditions, the Project site is developed with an RV and boat storage facility. Implementation of the Project would demolish the existing six buildings on site and redevelop the site with two warehouse buildings. Water, sewer, storm drain, and dry utilities currently service the Project site and connection points

are site adjacent. The proposed new building would utilize the site adjacent connection points, resulting in no greater physical impacts than otherwise studied throughout this document for on-site construction. The Project would not create a substantially different water, wastewater treatment, storm water discharge, or dry utility demands that have occurred for the property since it was developed with the existing office building. Therefore, the Project would not require or result in the construction or expansion of new facilities, and impacts would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. The Project is consistent with the impacts identified in TOP 2050 SEIR and the level of impact remains unchanged from that cited in TOP 2050 SEIR.

b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR concluded that water supply and delivery systems are adequate to meet projected requirements and impacts would be less than significant.

The Ontario Municipal Utilities Company (OMUC) provides water service to residents, businesses, and other users in the City, including the Project site. The primary source of Ontario's water supply (approximately 46 percent) is groundwater pumped by the City from the Chino Groundwater Basin, which is adjudicated and managed by the Chino Basin Watermaster. Additional water supplies include treated groundwater from the Chino Basin Desalter Authority (CDA), recycled water from Inland Empire Utilities Agency (IEUA), imported water from the Water Facilities Authority (WFA), and purchased water from the San Antonio Water Company (SAWCo). The City operates 12 active reservoirs that store a total of 75 million gallons. Additionally, the City has 6 booster pump stations and 17 groundwater wells with a total production capacity of about 56 million gallons per day. According to TOP 2050 SEIR, the City provides an average supply of 33.14 mgd of water to its service area.

Based on Table 4-8, *Domestic Water Unit Demand Factors,* of the City of Ontario Water Master Plan (2021), the Project site currently results, and would continue result in, a total water demand of approximately 22.5 acre-feet per year (based on a rate of 2,000 gpd/ac for the 10.05-acre site). Table UT-1 shows the projected water supply and demand totals for normal, single dry, and multiple dry years from 2020 to 2045.

Table UT-1: Water Supply and Demand Comparison

	2025	2030	2035	2040	2045
Normal Year (afy)					
Supply Totals	52,550	58,513	63,838	73,668	73,668
Demand Totals	52,550	58,513	63,838	73,668	73,668
Single Dry Year (afy)					
Supply Totals	57,058	63,534	68,847	79,989	79,989
Demand Totals	57,058	63,534	68,847	79,989	79,989
Multiple Dry Years (afy) – First Year					
Supply Totals	56,080	62,445	67,667	78,618	78,618
Demand Totals	56,080	62,445	67,667	78,618	78,618
Multiple Dry Years (afy) – Second Year					
Supply Totals	56,248	62,632	67,870	78,853	78,853
Demand Totals	56,248	62,632	67,870	78,853	78,853
Multiple Dry Years (afy) – Third Year					
Supply Totals	59,493	66,246	71,786	83,403	83,403

Demand Totals	59,493	66,246	71,786	83,403	83,403
Multiple Dry Years (afy) – Fourth Year					
Supply Totals	54,268	60,428	65,481	76,078	76,078
Demand Totals	54,268	60,428	65,481	76,078	76,078
Multiple Dry Years (afy) – Fifth Year					
Supply Totals	47,436	52,820	57,237	66,500	66,500
Demand Totals	47,436	52,820	57,237	66,500	66,500

Source: Ontario UWMP 2021
Note: afy: acre-feet per year

Based on the City's UWMP supply and demand data, and consistent with the findings of TOP 2050 SEIR, the City would have continued water supplies available to serve the Project site. Additionally. redevelopment of the Project site would also be required to comply with CALGreen/Title 24 requirements for low-flow plumbing fixtures and irrigation, which would provide for efficient water use. Therefore, the City has sufficient water supplies available to serve the Project during normal, dry, and multiple dry years, and impacts would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. The Project is consistent with the impacts identified in TOP 2050 SEIR and the level of impact remains unchanged from that cited in TOP 2050 SEIR.

c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR determined wastewater generated by TOP 2050 could be adequately treated by the wastewater service provider for the project and would not require the construction of new wastewater treatment facilities or the expansion of existing facilities or exceed wastewater treatment requirements of the Regional Water Quality Control Board. Impacts would be less than significant.

Wastewater generated by the City of Ontario is treated by the Inland Empire Utilities Agency (IEUA). IEUA operates four wastewater treatment plants that provide recycled water to the western part of San Bernardino County. IEUA also maintains a series of regional trunk lines that transport wastewater flows from Ontario to one of IEUA's one of two regional treatment plants located in Ontario: Regional Water Recycling Plan #-1 (RP-1) and Regional Water Recycling Plant #5 (RP-5). The current combined capacity of these two facilities is 60.3 mgd and would increase to 66.5 mgd once the expansion project that is currently under construction at RP-5 is completed. IEUA can route flows to either of the two facilities as needed. In 2020, RP-1 treated an average wastewater flow of 25 mgd, and RP-2 treated an average wastewater flow of 8 mgd (IEUA 2020). Therefore, these two wastewater treatment plants have a current combined treatment rate of 33 mgd.

Based on IEUA's wastewater generation rate of 25 gallons per day per employee[12] for industrial uses, the Project would conservatively generate a total of 4,975 gpd (0.004 mgd) of wastewater. As such, the remaining capacity of IEUA's treatment plants is adequate to serve the Project and the Project would not result in a determination by the wastewater treatment provider that it has inadequate capacity to serve the Project's projected demand in addition to the provider's existing commitments. As such, impacts would be less than significant.

[12] Wastewater generation rate obtained from the IEUA Wastewater Facilities Master Plan Update Report (2015). Available at https://www.ieua.org/wp-content/uploads/2015/01/IEUA_WFMP_Volume2_FINAL_06032015.pdf

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. The Project is consistent with the impacts identified in TOP 2050 SEIR and the level of impact remains unchanged from that cited in TOP 2050 SEIR.

d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Impacts Associated with the Proposed Project

No New Impact. TOP 2050 SEIR determined existing and/or proposed facilities would be able to accommodate solid waste generated by TOP 2050 and impacts would be less than significant.

The City of Ontario provides its own solid waste collection service. According to the most recent CalRecycle data, over 98 percent of the solid waste collected from the City was taken to either Badlands Sanitary Landfill or El Sobrante Landfill. The Badlands Sanitary Landfill is permitted to accept 4,800 tons of solid waste per day and is permitted to operate through 2026. The Badlands Sanitary Landfill has a remaining capacity of 7,800,000 tons. As of August 2022, Badlands Landfill had an average disposal of 2,656 tons per day. Thus, on average the facility has an additional capacity of 2,144 tons per day (Calrecycle 2022). The El Sobrante Landfill is permitted to accept 16,054 tons of solid waste per day and is permitted to operate through 2051. The El Sobrante Landfill has a remaining capacity of 143,977,170 tons. As of August 2022, El Sobrante Landfill had an average disposal of 10,710 tons per day. Thus, on average, the facility had an additional capacity of 5,344 tons per day (Calrecycle 2022).

Construction

Construction of the Project would require demolition of the existing six structures on site, totaling 77,969 SF and associated infrastructure. Demolition of the structures on site would generate approximately 7,060 tons of waste. However, Section 5.408.1 of the 2016 California Green Building Standards Code requires demolition and construction activities to recycle or reuse a minimum of 65 percent of the nonhazardous construction and demolition waste. Thus, the demolition and construction solid waste that would be disposed of at the landfill would be approximately 35 percent of the waste generated. Therefore, demolition activities, which would generate the most solid waste would require disposal of approximately 2,471 tons of solid waste. As described in the Air Quality Analysis, demolition is expected to take 10 days. As such this would equate to approximately 247 tons of solid waste per day.

As described above, the Badlands Landfill has additional capacity of approximately 2,144 tons per day and El Sobrante Landfill has additional capacity of approximately 5,344 tons per day. Therefore, the facilities would be able to accommodate the addition of 247 tons of waste per day during demolition of the Project. Therefore, the Badlands Sanitary Landfill and EL Sobrante Landfill would be able to accommodate solid waste from construction of the Project.

Operation

The CalEEMod solid waste generation rate for general light industrial land use is 1.24 tons per year per 1,000 square feet. Thus, the two proposed warehouse buildings totaling 237,236 SF would generate a total of 294.17 tons of solid waste per year, or 5.66 tons per week. As such, construction of the two warehouse buildings would generate 4.4 less tons of solid waste per year compared to the 240,778 SF previously analyzed Project evaluated in TOP 2050 SEIR. At least 75 percent of the solid waste is required by AB 341 to be recycled, thus the Project would require disposal of approximately 1.41 tons of solid waste per week.

As the Badlands Landfill has additional capacity of approximately 2,144 tons per day and El Sobrante Landfill has additional capacity of approximately 5,344 tons per day, the facilities would be able to accommodate the addition of 1.41 tons of waste per day from the Project. Therefore, the Badlands Sanitary Landfill and EL Sobrante Landfill would be able to accommodate solid waste from operation of the Project, and impacts related to landfill capacity would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. The Project is consistent with the impacts identified in TOP 2050 SEIR and the level of impact remains unchanged from that cited in TOP 2050 SEIR.

e) Comply with federal, state, and local statutes and regulations related to solid waste?

Impacts Associated with the Proposed Project

No New Impacts. TOP 2050 SEIR determined TOP 2050 would comply with related solid waste regulations and impacts would be less than significant.

The Project would result in new development that would generate an increased amount of solid waste. All solid waste-generating activities within the city are subject to the requirements set forth in the 2019 California Green Building Standards Code that requires demolition and construction activities to recycle or reuse a minimum of 65 percent of the nonhazardous construction and demolition waste, and AB 341 that requires diversion of a minimum of 75 percent of operational solid waste. Development of the Project would be consistent with all state regulations, as ensured through the City's permitting process; and impacts would not occur. Therefore, the Project would result in less than significant impacts related to potential conflicts with federal, State, and local management and reduction statutes and regulations pertaining to solid waste.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR. The Project is consistent with the impacts identified in TOP 2050 SEIR and the level of impact remains unchanged from that cited in TOP 2050 SEIR.

Conclusion

Based on the foregoing, none of the conditions identified in State CEQA Guidelines Section 15162 that would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts or mitigation measures exist regarding utilities and service systems. There have not been 1) changes related to development of the Project site that involve new significant environmental effects or a substantial increase in the severity of previously identified effects; 2) substantial changes with respect to the circumstances under which development of the Project site is undertaken that require major revisions of TOP 2050 SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified effects; or 3) the availability of new information of substantial importance relating to significant effects or mitigation measures or alternatives that were not known and could not have been known when TOP 2050 SEIR was certified as completed.

Because none of the conditions identified in State CEQA Guidelines Section 15162 would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts, State CEQA Guidelines 15168 also does not require additional environmental review.

Regulatory Requirements (RRs)

None.

Project Design Features (PDFs)

None.

Mitigation/Monitoring Required

No new impacts nor substantially more severe utilities and service systems impacts would result from implementation of the Project; therefore, no new or revised mitigation measures are required regarding utilities and service systems.

d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☐	☐	☒

Summary of Impacts Identified in TOP 2050 SEIR

TOP 2050 SEIR evaluated impacted related to wildfire in section 5.20. TOP 2050 SEIR determined that the project would not result in significant impacts related to emergency access. TOP 2050 SEIR discusses that the City is outside of the State Responsibility Area (SRA), and CAL FIRE has determined that the City contains no areas subject to very high wildfire risk. TOP 2050 SEIR identified that even though fuel loading is light in Ontario and fire risk comes primarily from urban fires, there is still some risk related to wildfires. TOP 2050 SEIR determined that wildfire impacts would be less than significant with adherence to existing regulations and TOP 2050 wildfire policies.

TOP 2050 SEIR Mitigation Measures:

None.

a) Substantially impair an adopted emergency response plan or emergency evacuation plan?

Impacts Associated with the Proposed Project

No New Impact. According to the CAL FIRE Fire Hazard Severity Zone map, the Project site is not within an area identified as a Fire Hazard Area that may contain substantial fire risk or a VHFHSZ (CAL FIRE 2022). The City is outside of the State Responsibility Area (SRA) and CAL FIRE has determined that the City contains no areas subject to very high wildfire risk (TOP 2050 SEIR). As stated in Section 5.9 of this Addendum, the Project would not physically interfere with an adopted emergency response plan or emergency evacuation plan. The Project driveways and internal access would be required to meet the City's design standards to ensure adequate emergency access and evacuation pursuant to the requirements in Section 503 of the California Fire Code (Title 24, California Code of Regulations, Part 9). Additionally, the Project does not include any characteristics (e.g., permanent road closures or long-term blocking of road access) that would

substantially impair or otherwise conflict with an emergency response plan or emergency evacuation plan. Therefore, impacts related to emergency response and evacuation plans associated with construction of the Project would be less than significant.

Access to the Project site would be provided by five proposed driveways. Building 1 would be accessible via four driveways: two on Bon View Avenue and two on Ontario Boulevard. Building 2 would be accessible via one driveway on California Street. The Project does not include any changes to public or private roadways that would physically impair or otherwise conflict with an emergency response plan or emergency evacuation plan. Further, the Project would not obstruct or alter any transportation routes that could be used as evacuation routes during emergency events. Further, a review of emergency access is included as part of the City's Design Review process to ensure the Project is compliant with all applicable codes and ordinances for emergency vehicle access. Therefore, impacts to emergency plans and emergency evacuation plans would be less than significant.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR.

b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollution concentrations from a wildfire or the uncontrolled spread of a wildfire?

Impacts Associated with the Proposed Project

No New Impact. As stated previously, the Project site is not located within a fire hazard area. Additionally, the Project area is currently fully developed with light industrial and commercial uses. The areas on and surrounding the site lack extensive combustible materials and vegetation necessary for the uncontrolled spread of a wildfire.

The Project site is flat and there are limited elevation changes in the Project vicinity. The Project proposes development of a warehouse use in an urban area. As such, the Project itself would not exacerbate wildfire risks as compared to existing conditions because it is representative of existing development in the area. Conversely, removal of the aged building and fire suppression system and installation of new construction and fire suppression systems may reduce fire risks. Thus, no impact related to other factors that would expose Project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire would occur from the Project.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR.

c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Impacts Associated with the Proposed Project

No New Impact. As stated previously, the Project site is not located within a fire hazard area. The Project does not require the installation or maintenance of associated infrastructure (including roads, fuel breaks, emergency water sources, power lines, or other utilities) that would exacerbate fire risk or that would result in impacts to the environment. Although the Project includes new driveways and fire access lanes within the Project site, the Project does not include any changes to public or private roadways that would exacerbate fire risk or that would result in impacts to the environment. Although utility improvements, including domestic water, recycled water, sanitary sewer, and storm drain lines proposed as part of the Project would be extended throughout the Project site, these utility improvements would be underground and would not exacerbate fire risk. As described by TOP 2050 SEIR, adherence to existing regulations would reduce risks

from urban and wildland fire threats to the City to a less than significant level. The utility improvements that are part of redevelopment of the Project site would be reviewed and approved by the City part of the Project approval process to ensure compliance. Therefore, the Project would not include infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities), that would exacerbate fire risk or that would result in impacts to the environment.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR.

d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Impacts Associated with the Proposed Project

No New Impact. As stated previously, the Project site is not located within a fire hazard area. According to FEMA's FIRM Flood Map 06071C8617J, the Project site is not identified within a flood zone. Additionally, as discussed in Section, 5.7, Geology and Soils, the Project site has relatively flat topography and is not subject to landslides or slope instabilities.

As established in Section 5.10 of this Addendum, soil would be compacted and drainage patterns would be temporarily altered due to grading during Project construction, and there would be an increased potential for flooding compared to existing conditions. However, construction BMPs would be identified and implemented as part of the SWPPP required for the Project. Implementation of construction BMPs would control and direct surface runoff to prevent flooding. As such, Project construction would not expose people or structures to significant risks related to downslope and downstream flooding. During operation, the Project would not substantially alter the existing onsite drainage patterns. Compliance with the proposed operational BMPs would ensure onsite storm drain facilities would be sized to accommodate stormwater runoff from the Project site so that onsite flooding would not occur. Further, projects in the City are required to comply with the CBC, which would include the incorporation of: 1) seismic safety features to minimize the potential for significant effects as a result of earthquakes; 2) proper building footings and foundations; and 3) construction of the building structures so that it would withstand the effects of strong ground shaking. These features would reduce potential impacts related to landslides to a less than significant level.

No new or substantially greater impacts would occur with implementation of the Project when compared to those identified in TOP 2050 SEIR.

Conclusion

Based on the foregoing, none of the conditions identified in State CEQA Guidelines Section 15162 that would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts or mitigation measures exist regarding wildfire. There have not been 1) changes related to development of the Project site that involve new significant environmental effects or a substantial increase in the severity of previously identified effects; 2) substantial changes with respect to the circumstances under which development of the Project site is undertaken that require major revisions of TOP 2050 SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified effects; or 3) the availability of new information of substantial importance relating to significant effects or mitigation measures or alternatives that were not known and could not have been known when TOP 2050 SEIR was certified as completed.

Because none of the conditions identified in State CEQA Guidelines Section 15162 would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts, State CEQA Guidelines 15168 also does not require additional environmental review.

Regulatory Requirements (RRs)

None.

Project Design Features (PDFs)

None.

Mitigation/Monitoring Required

No new impacts nor substantially more severe wildfire impacts would result from implementation of the Project; therefore, no new or revised mitigation measures are required regarding wildfires.

5.21 MANDATORY FINDINGS OF SIGNIFICANCE	Subsequent or Supplemental EIR			Addendum to EIR	
	Substantial Change in Project or Circumstances Resulting in New Significant Effects	New Information Showing Greater Significant Effects than Previous EIR	New Information Identifying New Mitigation or Alternative to Reduce Significant Effect is Declined	Minor Technical Changes or Additions	No New Impact/ No Impact
a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☐	☐	☐	☒
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	☐	☐	☐	☐	☒
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☐	☐	☐	☒

a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Impacts Associated with the Proposed Project

No New Impact. As discussed in Section *5.4, Biological Resources*, the Project site is completely developed and located within an urban area that does not contain any native habitats. Due to the disturbed status of the site, it does not provide habitat that could be utilized by species listed or candidates for listing by USFWS, CDFW, or the CNPS. There is existing ornamental landscaping and trees on the site that have the potential to provide habitat for nesting migratory birds. With adherence to RR BIO-1 and RR BIO-2, potential impacts to nesting migratory birds would be reduced to a less than significant level. Therefore, there would be less than significant impacts related to fish and wildlife species or plant community, which is consistent with analysis within TOP 2050 SEIR.

As discussed in Section *5.5, Cultural Resources*, there are no historic resources located with the Project site. In addition, because the site has previously been disturbed, there is reduced potential for the Project to impact archeological resources. However, the Project may result in excavation into the underlying older alluvium where undiscovered archaeological resources could exist, including archeological resources that are also

tribal cultural resources. As such, the Project would implement TOP 2050 SEIR Mitigation Measure 5-2, which would reduce impacts to less than significant. Therefore, the Project would not eliminate important examples of the major periods of California history or prehistory, and impacts would be less than significant with mitigation.

b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?

Impacts Associated with the Proposed Project

No New Impact. The Project's potential cumulative impacts were analyzed in TOP 2050 SEIR as part of build out of the Project and would not result in new impacts beyond those analyzed in TOP 2050 SEIR. Therefore, the Project would not result in new or substantially more severe cumulatively considerable impact under any impact area, including aesthetics, air quality, cultural resources, GHG emissions, hazards and hazardous materials, land use and planning, noise, population and housing, public services, recreation, transportation and traffic, tribal cultural resources, utilities and service systems, or wildfires. With implementation of existing regulations and the relevant TOP 2050 SEIR mitigation measures, the Project would not result in any new significant impacts.

c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

Impacts Associated with the Proposed Project

No New Impact. As described throughout Section 5, above, the Project has no new or substantially more severe potentially significant impacts and no new mitigation measures would be required. The implementation of TOP 2050 SEIR mitigation measures, City standards, and City guidelines would ensure that there would be no substantial adverse effects on human beings, either directly or indirectly. There would be no new impacts.

Conclusion

Based on the foregoing, none of the conditions identified in State CEQA Guidelines Section 15162 that would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts or mitigation measures exist. There have not been 1) changes related to development of the Project site that involve new significant environmental effects or a substantial increase in the severity of previously identified effects; 2) substantial changes with respect to the circumstances under which development of the Project site is undertaken that require major revisions of TOP 2050 SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified effects; or 3) the availability of new information of substantial importance relating to significant effects or mitigation measures or alternatives that were not known and could not have been known when TOP 2050 SEIR was certified as completed.

Because none of the conditions identified in State CEQA Guidelines Section 15162 would trigger the need to prepare a subsequent or supplemental EIR or other environmental document to evaluate Project impacts, State CEQA Guidelines 15168 also does not require additional environmental review.

Regulatory Requirements (RRs)
As outlined in Sections 5.1 through 5.20, above.

Project Design Features (PDFs)

As outlined in Sections 5.1 through 5.20, above.

Mitigation/Monitoring Required

As detailed previously, TOP 2050 SEIR mitigation measures that are applicable to the Project would be implemented for the Project as intended by TOP 2050 SEIR. Upon implementation of applicable EIR mitigation measures, no new impacts nor substantially more adverse impacts would result from the implementation of the Project; therefore, no new or revised mitigation measures are required. No refinements related to the Project are necessary to TOP 2050 SEIR mitigation measures and no new mitigation measures are required.

INTRODUCTION

This air quality, heath risk, energy, and greenhouse gas (GHG) impact report has been prepared to evaluate the potential air quality and GHG emissions impacts associated with the 627 Bon View Warehouse Project (project) in the City of Ontario (City), California. This report follows the guidelines identified by the South Coast Air Quality Management District (SCAQMD) in its California Environmental Quality Act (CEQA) *Air Quality Handbook*,[1] and associated updates. In keeping with these guidelines, this analysis describes existing air quality, air quality and GHG emissions generated from project-related sources, regional air pollution, and global climate change. In addition, this analysis discusses energy use resulting from implementation of the proposed project and evaluates whether the proposed project would result in the wasteful, inefficient, or unnecessary consumption of energy resources or conflict with any applicable plans for renewable energy and energy efficiency.

In addition, the proposed project is located within The Ontario Plan area; therefore, applicable mitigation measures from The Ontario Plan 2050 Final Supplemental Environmental Impact Report (FSEIR) are identified where applicable. This report has been prepared consistent with the requirements of The Ontario Plan 2050 FSEIR Mitigation Measures 3-1 and AQ-1, which require that prior to discretionary approval by the City of Ontario for development projects subject to CEQA, project applicants shall prepare and submit a technical assessment evaluating potential project construction- and operational-related air quality impacts to the City of Ontario Planning Department for review and approval. Consistent with the applicable mitigation measures, this evaluation has been prepared in conformance with SCAQMD methodology for assessing air quality impacts and identifies whether mitigation measures would be necessary as part of conditions of approval if air pollutants are determined to have the potential to exceed the SCAQMD thresholds of significance.

PROJECT LOCATION AND DESCRIPTION

The proposed project is located on 627 Bon View Avenue in the City of Ontario, San Bernardino County, California. The total project size would be approximately 10.05 acres. See Figure 1, Project Location and Vicinity, and Figure 2, Project Site Plan, below.

The proposed project would demolish the existing six structures on site, totaling 77,696 sq ft (sq ft) and construct two industrial warehouse buildings. Building 1 would be approximately 192,367 sq ft, and Building 2 would be approximately 46,091 sq ft, for a total of 238,458 sq ft of building area. The project would divide the 10.05-acre parcel into two separate parcels, with the northern parcel totaling 8.09 acres and the southern parcel totaling 1.90 acres. The proposed project would not require a change to the General Plan land use designation or the current zoning and would be consistent with the City's General Plan and Zoning Ordinance.

GENERAL NOTES:

1. EXISTING CONSTRUCTION SITE DEBRIS TO BE REMOVED.
2. THE SITE CURRENTLY SLOPES +/- 2 %.
3. NO SIGNS ARE PROPOSED WITH THIS APPLICATION PACKAGE.
4. ALL PROPOSED NEW ON-SITE UTILITY SERVICES SHALL BE UNDERGROUNDED.
5. DRIVEWAYS SHALL BE CONSTRUCTED PER CITY STANDARD PLAN.
6. DAMAGED SECTIONS OF CURB & GUTTER ALONG PUBLIC RIGHT OF WAY SHALL BE REPAIRED.
7. "SITE PLAN SHALL MEET ALL ENGINEERING AND NPDES REQUIREMENTS".
8. ALL EXTERIOR LIGHT SHALL BE A 1 FC MIN.
9. ALL BACKFLOW DEVICES SHALL HAVE A SECURE LOCKABLE CAGE AROUND IT.
10. SLOPES GREATER THAN 3:1 WILL REQUIRE JUTE NETTING WITH GROUNDCOVER.
11. ALL OUT SWINGING DOORS TO HAVE NON-REMOVABLE HINGE PINS.
12. ALL GATES ARE MANUALLY OPERATED AND ARE INTENDED TO REMAIN OPEN DURING BUSINESS HOURS.

627 Bon View Warehouse Project

Project Site Plan

Building 1 would be located on the northern parcel and would total 192,376 sq ft, inclusive of 4,000 sq ft of ground floor office space and 4,000 sq ft of mezzanine. 20 trailer stalls, and 106 standard parking spaces. In addition, approximately 53,500 sq ft of ornamental landscaping would be associated with Building 1.

Building 2 would be located on the southern parcel and would total 46,091 sq ft, inclusive of 3,000 sq ft of ground floor office space. Building 2 would include 5 dock doors, 2 trailer stalls, and 37 standard parking spaces. Approximately 8,600 sq ft of ornamental landscaping would be associated with Building 2.

Typical operational characteristics include employees traveling to and from the site, delivery of products to the site, and truck loading and unloading. The project is assumed to operate 24 hours per day, 7 days per week; however, these may shift depending on the tenant, as the hours of operation are unknown. The project would be operated as two individual warehouses. The proposed project would generate a total of 554 average daily trips, including 345 passenger vehicle trips, 61 two-axle truck trips, 29 three-axle truck trips, and 119 four-axle truck trips.

Construction would begin the third quarter of 2023 and would be anticipated to last for approximately 15 months, with project operations beginning in the fourth quarter of 2024. Construction activities for the project would occur over one phase and would include demolition, site preparation, grading, building construction, paving, and architectural coating activities. Based on the preliminary grading plans, the project site would be balanced, no import or export of soil would be required.

EXISTING LAND USES IN THE PROJECT AREA

For the purposes of this analysis, sensitive receptors are areas of the population that have an increased sensitivity to air pollution or environmental contaminants. Sensitive receptor locations include residences, schools, daycare centers, hospitals, parks, and similar uses that are sensitive to air quality. Impacts on sensitive receptors are of particular concern because those receptors are the population most vulnerable to the effects of air pollution.[2] The project site is surrounded primarily by industrial, office uses, and residential areas. The areas adjacent to the project site include the following uses: East Ontario Boulevard and existing rail lines to the north, existing industrial uses to the east, existing industrial land uses and a single-family residence to the south opposite East California Street, and office and industrial uses to the west opposite South Bon View Avenue.

The closest sensitive receptors to the project site are residential uses such as a single-family home located approximately 179 feet south of the project site opposite East California Street. Further single-family homes are located south of the project site about 540 feet opposite Mission Boulevard.

[2] South Coast Air Quality Management District (SCAQMD). 1993. *CEQA Air Quality Handbook*. Website: http://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook/ceqa-air-quality-handbook-(1993) (accessed October 2022).

The Ontario Plan 2050 FSEIR

As identified above, the project site is within The Ontario Plan area. The Ontario Plan 2050 is an update to the previous The Ontario Plan; therefore, The Ontario Plan 2050 FSEIR relies on the findings of the 2009 Draft EIR, 2010 Recirculated Draft EIR, and 2010 Final EIR (collectively referred to as the 2010 Certified EIR). The Ontario Plan 2050 FSEIR identified the following mitigation measures that would apply to the proposed project and that would help to reduce and avoid potential impacts related to air quality:

3-1 Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project construction-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology for assessing air quality impacts. If construction-related criteria air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario Building Department shall require feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and may include:

- Require fugitive dust control measures that exceed South Coast Air Quality Management District's Rule 403, such as:
    - Requiring use of nontoxic soil stabilizers to reduce wind erosion.
    - Applying water every four hours to active soil disturbing activities.
    - Tarping and/or maintaining a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials.
- Using construction equipment rated by the United States Environmental Protection Agency as having Tier 4 interim or higher exhaust emission limits.
- Ensuring construction equipment is properly serviced and maintained to the manufacturer's standards.
- Limiting nonessential idling of construction equipment to no more than five consecutive minutes.
- Using Super-Compliant VOC paints for coating of architectural surfaces whenever possible. A list of Super-Compliant architectural coating manufactures can be found on the South Coast Air Quality Management District's website at: http://www.aqmd.gov/prdas/brochures/SuperCompliant_AIM.pdf.

These identified measures shall be incorporated into all appropriate construction documents (e.g., construction management plans) submitted to the City and shall be verified by the City's Planning Department.

3-2 The City of Ontario shall evaluate new development proposals within the City and require all developments to include access or linkages to alternative modes of transportation, such as transit stops, bike paths, and/or pedestrian paths (e.g., sidewalks).

AQ 1 Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project operation-phase-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology in assessing air quality impacts. If operation-related air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario Planning Department shall require that applicants for new development projects incorporate mitigation measures to reduce air pollutant emissions during operational activities. The identified measures shall be included as part of the conditions of approval. Possible mitigation measures to reduce long-term emissions could include, but are not limited to the following:

- For site-specific development that requires refrigerated vehicles, the construction documents shall demonstrate an adequate number of electrical service connections at loading docks for plug-in of the anticipated number of refrigerated trailers to reduce idling time and emissions.

- Applicants for manufacturing and light industrial uses shall consider energy storage and combined heat and power in appropriate applications to optimize renewable energy generation systems and avoid peak energy use.

- Site-specific developments with truck delivery and loading areas and truck parking spaces shall include signage as a reminder to limit idling of vehicles while parked for loading/unloading in accordance with California Air Resources Board Rule 2845 (13 CCR Chapter 10 sec. 2485).

- Provide changing/shower facilities as specified in Section A5.106.4.3 of CALGreen (Nonresidential Voluntary Measures).

- Provide bicycle parking facilities per Section A4.106.9 of CALGreen (Residential Voluntary Measures).

- Provide preferential parking spaces for low-emitting, fuel-efficient, and carpool/van vehicles per Section A5.106.5.1 of CALGreen (Nonresidential Voluntary Measures).

- Provide facilities to support electric charging stations per Section A5.106.5.3 and Section A5.106.8.2 of CALGreen (Nonresidential Voluntary Measures; Residential Voluntary Measures).

- Applicant-provided appliances shall be Energy Star–certified appliances or appliances of equivalent energy efficiency (e.g., dishwashers, refrigerators, clothes washers, and dryers). Installation of Energy Star-certified or equivalent appliances shall be verified by the City during plan check.

BACKGROUND

This section provides current background information on air pollutants and GHG emissions and their health effects. It also provides current regulatory background information, including information from the California Air Resources Board's (CARB) Air Quality and Land Use Handbook[3] (CARB Handbook); a description of the general health risks of toxics, and the significance criteria for project evaluation. In addition, this section provides background information on energy usage in the project area and provides regulatory background information, including federal, State, and local energy regulations.

AIR POLLUTANTS AND HEALTH EFFECTS

Both State and federal governments have established health-based ambient air quality standards (California Ambient Air Quality Standards [CAAQS] and National Ambient Air Quality Standards [NAAQS], respectively) for six criteria air pollutants:[4] carbon monoxide (CO), ozone (O_3), nitrogen dioxide (NO_2), sulfur dioxide (SO_2), lead (Pb), and suspended particulate matter (PM). In addition, the State has set standards for sulfates, hydrogen sulfide, vinyl chloride, and visibility-reducing particles. These standards are designed to protect the health and welfare of the populace with a reasonable margin of safety. Long-term exposure to elevated levels of criteria pollutants may result in adverse health effects. However, emission thresholds established by an air district are used to manage total regional emissions within an air basin based on the air basin's attainment status for criteria pollutants. These emission thresholds were established for individual projects that would contribute to regional emissions and pollutant concentrations and could adversely affect or delay the projected attainment target year for certain criteria pollutants.

Because of the conservative nature of the thresholds and the basin-wide context of individual project emissions, there is no known direct correlation between a single project and localized air quality-related health effects. One individual project that generates emissions exceeding a threshold does not necessarily result in adverse health effects for residents in the project vicinity. This condition is especially true when the criteria pollutants exceeding thresholds are those with regional effects, such as ozone precursors like nitrogen oxides (NO_X) and volatile organic compounds (VOCs).

Occupants of facilities such as schools, daycare centers, parks and playgrounds, hospitals, and nursing and convalescent homes are considered to be more sensitive than the general public to air pollutants because these population groups have increased susceptibility to respiratory disease. Persons engaged in strenuous outdoor work or exercise also have increased sensitivity to poor air quality. Residential areas are considered more sensitive to air quality conditions, compared to commercial and industrial areas, because people generally spend longer periods of time at their residences, with greater associated exposure to ambient air quality conditions. Recreational uses

[3] California Air Resources Board (CARB). 2005. *Air Quality and Land Use Handbook: A Community Health Perspective.* April.

[4] Criteria pollutants are defined as those pollutants for which the federal and State governments have established ambient air quality standards, or criteria, for outdoor concentrations in order to protect public health.

are also considered sensitive compared to commercial and industrial uses due to greater exposure to ambient air quality conditions associated with exercise.

Ozone

Rather than being directly emitted, ozone (smog) is formed by photochemical reactions between NO_X and VOC. Ozone is a pungent, colorless gas. Elevated ozone concentrations result in reduced lung function, particularly during vigorous physical activity. This health problem is particularly acute in sensitive receptors such as the sick, elderly, and young children. Ozone levels peak during the summer and early fall months.

Carbon Monoxide

CO is formed by the incomplete combustion of fossil fuels, almost entirely from automobiles. It is a colorless, odorless gas that can cause dizziness, fatigue, and impairments to central nervous system functions. CO passes through the lungs into the bloodstream, where it interferes with the transfer of oxygen to body tissues.

Particulate Matter

PM is the term used for a mixture of solid particles and liquid droplets found in the air. Coarse particles are those that are 10 microns or less in diameter, or PM_{10}. Fine, suspended particulate matter with an aerodynamic diameter of 2.5 microns or less, or $PM_{2.5}$, is not readily filtered out by the lungs. Nitrates, sulfates, dust, and combustion particulates are major components of PM_{10} and $PM_{2.5}$. These small particles can be directly emitted into the atmosphere as byproducts of fuel combustion; through abrasion, such as tire or brake lining wear; or through fugitive dust (wind or mechanical erosion of soil). They can also be formed in the atmosphere through chemical reactions. Particulates may transport carcinogens and other toxic compounds that adhere to the particle surfaces and can enter the human body through the lungs.

Nitrogen Dioxide

NO_2 is a reddish brown gas that is a byproduct of combustion processes. Automobiles and industrial operations are the main sources of NO_2. Aside from its contribution to ozone formation, NO_2 also contributes to other pollution problems, including a high concentration of fine PM, poor visibility, and acid deposition. NO_2 may be visible as a coloring component on high pollution days, especially in conjunction with high ozone levels. NO_2 decreases lung function and may reduce resistance to infection.

Sulfur Dioxide

SO_2 is a colorless, irritating gas formed primarily from incomplete combustion of fuels containing sulfur. Industrial facilities also contribute to gaseous SO_2 levels in the region. SO_2 irritates the respiratory tract, can injure lung tissue when combined with fine PM, and reduces visibility and the level of sunlight.

Lead

Leaded gasoline (phased out in the United States beginning in 1973), paint (on older houses and cars), smelters (metal refineries), and the manufacture of lead storage batteries have been the primary sources of lead released into the atmosphere. Lead has multiple adverse neurotoxic health effects, and children are at special risk. Some lead-containing chemicals cause cancer in animals. Lead levels in the air have decreased substantially since leaded gasoline was eliminated. Ambient lead concentrations are only monitored on an as-warranted, site-specific basis in California. On October 15, 2008, the United States Environmental Protection Agency (USEPA) strengthened the NAAQS for lead by lowering it from 1.5 to 0.15 micrograms per cubic meter ($\mu g/m^3$). The USEPA revised the monitoring requirements for lead in December 2010. These requirements focus on airports and large urban areas, resulting in an increase in 76 monitors nationally.

Volatile Organic Compounds

VOCs (also known as reactive organic gases [ROGs] and reactive organic compounds [ROCs]) are formed from the combustion of fuels and the evaporation of organic solvents. VOCs are not defined as criteria pollutants, however, because VOCs accumulate in the atmosphere more quickly during the winter, when sunlight is limited and photochemical reactions are slower, they are a prime component of the photochemical smog reaction. There are no attainment designations for VOCs.

Toxic Air Contaminants

In addition to the criteria pollutants discussed above, toxic air contaminants (TACs) are another group of pollutants of concern. TACs are injurious in small quantities and are regulated by the USEPA and the CARB. Some examples of TACs include benzene, butadiene, formaldehyde, and hydrogen sulfide. The identification, regulation, and monitoring of TACs is relatively recent compared to that for criteria pollutants.

TACs do not have ambient air quality standards, but are regulated by the USEPA, CARB, and the SCAQMD. In 1998, the CARB identified particulate matter from diesel-fueled engines as a TAC. The CARB has completed a risk management process that identified potential cancer risks for a range of activities using diesel-fueled engines.[5] High-volume freeways, stationary diesel engines, and facilities attracting heavy and constant diesel vehicle traffic (e.g., distribution centers and truck stops) were identified as posing the highest risk to adjacent receptors. Other facilities associated with increased risk include warehouse distribution centers, large retail or industrial facilities, high-volume transit centers, and schools with a high volume of bus traffic. Health risks from TACs are a function of both concentration and duration of exposure.

Unlike TACs emitted from industrial and other stationary sources noted above, most diesel particulate matter (DPM) is emitted from mobile sources—primarily "off-road" sources such as construction and mining equipment, agricultural equipment, and truck-mounted refrigeration units, as well as "on-road" sources such as trucks and buses traveling on freeways and local roadways.

[5] CARB. 2000. Stationary Source Division and Mobile Source Control Division. *Risk Reduction Plan to Reduce Particulate Matter Emissions from Diesel-Fueled Engines and Vehicles.* October.

Although not specifically monitored, recent studies indicate that exposure to DPM may contribute significantly to a cancer risk (a risk of approximately 500 to 700 in 1,000,000) that is greater than all other measured TACs combined.[6] The technology for reducing DPM emissions from heavy-duty trucks is well established, and both State and federal agencies are moving aggressively to regulate engines and emission control systems to reduce and remediate diesel emissions. The CARB anticipated that by 2020, average statewide DPM concentrations will decrease by 85 percent from levels in 2000 with full implementation of the CARB's Diesel Risk Reduction Plan,[7] meaning that the statewide health risk from DPM is expected to decrease from 540 cancer cases in 1,000,000 to 21.5 cancer cases in 1,000,000. The CARB 2000 Diesel Risk Reduction Plan is still the most recent version and has not been updated.

Table A summarizes the sources and health effects of air pollutants discussed in this section. Table B presents a summary of CAAQS and NAAQS.

Table A: Sources and Health Effects of Air Pollutants

Pollutants	Sources	Primary Effects
Carbon Monoxide (CO)	• Incomplete combustion of fuels and other carbon-containing substances, such as motor exhaust • Natural events, such as decomposition of organic matter	• Reduced tolerance for exercise • Impairment of mental function • Impairment of fetal development • Death at high levels of exposure • Aggravation of some heart diseases (angina)
Nitrogen Dioxide (NO_2)	• Motor vehicle exhaust • High temperature stationary combustion • Atmospheric reactions	• Aggravation of respiratory illness • Reduced visibility • Reduced plant growth • Formation of acid rain
Ozone (O_3)	• Atmospheric reaction of organic gases with nitrogen oxides in sunlight	• Aggravation of respiratory and cardiovascular diseases • Irritation of eyes • Impairment of cardiopulmonary function • Plant leaf injury
Lead (Pb)	• Contaminated soil	• Impairment of blood functions and nerve construction • Behavioral and hearing problems in children
Suspended Particulate Matter ($PM_{2.5}$ and PM_{10})	• Stationary combustion of solid fuels • Construction activities • Industrial processes • Atmospheric chemical reactions	• Reduced lung function • Aggravation of the effects of gaseous pollutants • Aggravation of respiratory and cardiorespiratory diseases • Increased cough and chest discomfort • Soiling • Reduced visibility
Sulfur Dioxide (SO_2)	• Combustion of sulfur-containing fossil fuels • Smelting of sulfur-bearing metal ores Industrial processes	• Aggravation of respiratory diseases (asthma, emphysema) • Reduced lung function • Irritation of eyes • Reduced visibility • Plant injury • Deterioration of metals, textiles, leather, finishes, coatings, etc.

Table B: Federal and State Ambient Air Quality Standards

Pollutant	Averaging Time	California Standards[a]		Federal Standards[b]		
		Concentration[c]	Method[d]	Primary[c,e]	Secondary[c,f]	Method[g]
Ozone (O_3)[h]	1-Hour	0.09 ppm (180 µg/m³)	Ultraviolet Photometry	–	Same as Primary Standard	Ultraviolet Photometry
	8-Hour	0.07 ppm (137 µg/m³)		0.070 ppm (137 µg/m³)		
Respirable Particulate Matter (PM_{10})[i]	24-Hour	50 µg/m³	Gravimetric or Beta Attenuation	150 µg/m³	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	20 µg/m³		–		
Fine Particulate Matter ($PM_{2.5}$)[i]	24-Hour	-		35 µg/m³	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	12 µg/m³	Gravimetric or Beta Attenuation	12.0 µg/m³		
Carbon Monoxide (CO)	8-Hour	9.0 ppm (10 mg/m³)	Non-Dispersive Infrared Photometry (NDIR)	9 ppm (10 mg/m³)	–	Non-Dispersive Infrared Photometry (NDIR)
	1-Hour	20 ppm (23 mg/m³)		35 ppm (40 mg/m³)		
	8-Hour (Lake Tahoe)	6 ppm (7 mg/m³)		–	–	
Nitrogen Dioxide (NO_2)[j]	Annual Arithmetic Mean	0.03 ppm (57 µg/m³)	Gas Phase Chemi-luminescence	53 ppb (100 µg/m³)	Same as Primary Standard	Gas Phase Chemi-luminescence
	1-Hour	0.18 ppm (339 µg/m³)		100 ppb (188 µg/m³)	-	
Lead (Pb)[l,m]	30-Day Average	1.5 µg/m³	Atomic Absorption	–	–	High-Volume Sampler and Atomic Absorption
	Calendar Quarter	–		1.5 µg/m³ (for certain areas)[l]	Same as Primary Standard	
	Rolling 3-Month Average[i]	–		0.15 µg/m³		
Sulfur Dioxide (SO_2)[k]	24-Hour	0.04 ppm (105 µg/m3)	Ultraviolet Fluorescence	0.14 ppm (for certain areas)	–	Ultraviolet Fluorescence; Spectro-photometry (Pararosaniline Method)
	3-Hour	–		–	0.5 ppm (1300 µg/m³)	
	1-Hour	0.25 ppm (655 µg/m³)		75 ppb (196 µg/m³)[k]	–	
	Annual Arithmetic Mean	–		0.030 ppm (for certain areas)[k]	–	
Visibility-Reducing Particles[l]	8-Hour	See footnote n	Beta Attenuation and Transmittance through Filter Tape.	No Federal Standards		
Sulfates	24-Hour	25 µg/m³	Ion Chromatography			
Hydrogen Sulfide	1-Hour	0.03 ppm (42 µg/m³)	Ultraviolet Fluorescence			
Vinyl Chloride[j]	24-Hour	0.01 ppm (26 µg/m³)	Gas Chromatography			

Source: California Air Resources Board (2016) (Website: https://www.arb.ca.gov/research/aaqs/aaqs2.pdf).

Table notes are provided on the following page.

[a] California standards for ozone, carbon monoxide (except 8-hour Lake Tahoe), sulfur dioxide (1- and 24-hour), nitrogen dioxide, and particulate matter (PM_{10}, $PM_{2.5}$, and visibility reducing particles), are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.

[b] National standards (other than ozone, particulate matter, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For PM_{10}, the 24-hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 µg/m^3 is equal to or less than one. For $PM_{2.5}$, the 24-hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact USEPA for further clarification and current national policies.

[c] Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.

[d] Any equivalent measurement method which can be shown to the satisfaction of the CARB to give equivalent results at or near the level of the air quality standard may be used.

[e] National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.

[f] National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

[g] Reference method as described by the USEPA. An "equivalent method" of measurement may be used but must have a "consistent relationship to the reference method" and must be approved by the USEPA.

[h] On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm.

[i] On December 14, 2012, the national annual $PM_{2.5}$ primary standard was lowered from 15 µg/m^3 to 12.0 µg/m^3. The existing national 24- hour $PM_{2.5}$ standards (primary and secondary) were retained at 35 µg/m^3, as was the annual secondary standard of 15 µg/m^3. The existing 24-hour PM_{10} standards (primary and secondary) of 150 µg/m^3 also were retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.

[j] To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb. Note that the national 1-hour standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the national 1-hour standard to the California standards the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.

[k] On June 2, 2010, a new 1-hour SO_2 standard was established, and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO_2 national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.

Note that the 1-hour national standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the 1-hour national standard to the California standard the units can be converted to ppm. In this case, the national standard of 75 ppb is identical to 0.075 ppm.

[l] The CARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.

[m] The national standard for lead was revised on October 15, 2008, to a rolling 3-month average. The 1978 lead standard (1.5 µg/m^3 as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.

[n] In 1989, the CARB converted both the general statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the statewide and Lake Tahoe Air Basin standards, respectively.

°C = degrees Celsius
µg/m^3 = micrograms per cubic meter
CARB = California Air Resources Board
mg/m^3 = milligrams per cubic meter
ppb = parts per billion
ppm = parts per million
USEPA = United States Environmental Protection Agency

ENERGY

Electricity

Electricity is a manmade resource. The production of electricity requires the consumption or conversion of energy resources (including water, wind, oil, gas, coal, solar, geothermal, and nuclear resources) into energy. Electricity is used for a variety of purposes (e.g., lighting, heating, cooling, and refrigeration, and for operating appliances, computers, electronics, machinery, and public transportation systems).

According to the most recent data available, in 2020, California's electricity was generated primarily by natural gas (37.06 percent), renewable sources (33.09 percent), large hydroelectric (12.21 percent), nuclear (9.33 percent), coal (2.74 percent), and other and unspecified sources. Total electric generation in California in 2020 was 272,576 gigawatt-hours (GWh), down 2 percent from the 2019 total generation of 277,704 GWh.[8]

The project site is within the service territory of Southern California Edison (SCE). SCE provides electricity to more than 15 million people in a 50,000-square-mile (sq mi) area of Central, Coastal, and Southern California.[9] According to the California Energy Commission (CEC), total electricity consumption in the SCE service area in 2020 was 83,532.6 GWh (32,475 GWh for the residential sector and 51,057 GWh for the non-residential sector). Total electricity consumption in San Bernardino County in 2020 was 15,968.5 GWh (6,103 GWh for the residential sector).[10]

Natural Gas

Natural gas is a non-renewable fossil fuel. Fossil fuels are formed when layers of decomposing plant and animal matter are exposed to intense heat and pressure under the surface of the Earth over millions of years. Natural gas is a combustible mixture of hydrocarbon compounds (primarily methane) that is used as a fuel source. Natural gas is found in naturally occurring reservoirs in deep underground rock formations. Natural gas is used for a variety of uses (e.g., heating buildings, generating electricity, and powering appliances such as stoves, washing machines and dryers, gas fireplaces, and gas grills).

Natural gas consumed in California is used for electricity generation (45 percent), residential uses (21 percent), industrial uses (25 percent), and commercial uses (9 percent). California continues to depend on out-of-state imports for nearly 90 percent of its natural gas supply.[11]

11 CEC. 2021d. Supply and Demand of Natural Gas in California. Website: https://www.energy.ca.gov/data-reports/energy-almanac/californias-natural-gas-market/supply-and-demand-natural-gas-california (accessed October 2022).

The Southern California Gas Company (SoCalGas) is the natural gas service provider for the project site. SoCalGas provides natural gas to approximately 21.8 million people in a 24,000 sq mi service area throughout Central and Southern California, from Visalia to the Mexican border.[12] According to the CEC, total natural gas consumption in the SoCalGas service area in 2020 was 5,231 million therms (2,426 million therms for the residential sector). Total natural gas consumption in San Bernardino County in 2020 was 527 million therms (267 million therms for the residential sector).[13]

Fuel

Petroleum is also a non-renewable fossil fuel. Petroleum is a thick, flammable, yellow-to-black mixture of gaseous, liquid, and solid hydrocarbons that occurs naturally beneath the earth's surface. Petroleum is primarily recovered by oil drilling. It is refined into a large number of consumer products, primarily fuel oil, gasoline, and diesel.

The average fuel economy for light-duty vehicles (autos, pickups, vans, and SUVs) in the United States has steadily increased from about 14.9 miles per gallon (mpg) in 1980 to 22.9 mpg in 2020.[14] Federal fuel economy standards have changed substantially since the Energy Independence and Security Act was passed in 2007. The Act, which originally mandated a national fuel economy standard of 35 mpg by year 2020[15], applies to cars and light trucks of Model Years 2011 through 2020. In March 2020, the United States Environmental Protection Agency (USEPA) and National Highway Traffic Safety Administration (NHTSA) finalized the Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule for Model Years 2021–2026 Passenger Cars and Light Trucks, further detailed below.

Gasoline is the most used transportation fuel in California, with 97 percent of all gasoline being consumed by light-duty cars, pickup trucks, and sport utility vehicles. According to the most recent data available, total gasoline consumption in California was 289,918 thousand barrels or 1,464.7 trillion British Thermal Units (BTU) in 2020.[16] Of the total gasoline consumption, 273,289 thousand barrels or 1,380.7 trillion BTU were consumed for transportation.[17] Based on fuel consumption obtained from CARB's California Emissions Factor Model, Version 2021 (EMFAC2021), approximately 321.6 million gallons of diesel and approximately 917.9 million gallons of gasoline will be consumed from vehicle trips in San Bernardino County in 2022.

GREENHOUSE GASES AND GLOBAL CLIMATE CHANGE

Global climate change is the observed increase in the average temperature of the Earth's atmosphere and oceans in recent decades. The Earth's average near-surface atmospheric temperature rose 0.6 ± 0.2° Celsius (°C) or 1.1 ± 0.4° Fahrenheit (°F) in the 20th century. The prevailing scientific opinion on climate change is that most of the warming observed over the last 50 years is attributable to human activities. The increased amounts of carbon dioxide (CO_2) and other GHGs are the primary causes of the human-induced component of warming. GHGs are released by the burning of fossil fuels, land clearing, agriculture, and other activities, and lead to an increase in the greenhouse effect.[18]

GHGs are present in the atmosphere naturally, are released by natural sources, or are formed from secondary reactions taking place in the atmosphere. The gases that are widely seen as the principal contributors to human-induced global climate change are:

- CO_2
- Methane (CH_4)
- Nitrous oxide (N_2O)
- Hydrofluorocarbons (HFCs)
- Perfluorocarbons (PFCs)
- Sulfur hexafluoride (SF_6)

Over the last 200 years, humans have caused substantial quantities of GHGs to be released into the atmosphere. These extra emissions are increasing GHG concentrations in the atmosphere, and enhancing the natural greenhouse effect, which is believed to be causing global warming. While manmade GHGs include naturally-occurring GHGs such as CO_2, methane, and N_2O, some gases, like HFCs, PFCs, and SF_6 are completely new to the atmosphere.

Certain gases, such as water vapor, are short-lived in the atmosphere. Others remain in the atmosphere for significant periods of time, contributing to climate change in the long term. Water vapor is excluded from the list of GHGs above because it is short-lived in the atmosphere and its atmospheric concentrations are largely determined by natural processes, such as oceanic evaporation. For the purposes of this air quality analysis, the term "GHGs" will refer collectively to the six gases listed above.

These gases vary considerably in terms of Global Warming Potential (GWP), which is a concept developed to compare the ability of each GHG to trap heat in the atmosphere relative to another gas. The global warming potential is based on several factors, including the relative effectiveness of a gas to absorb infrared radiation and length of time that the gas remains in the atmosphere

[18] The temperature on Earth is regulated by a system commonly known as the "greenhouse effect." Just as the glass in a greenhouse lets heat from sunlight in and reduces the heat escaping, greenhouse gases like carbon dioxide, methane, and nitrous oxide in the atmosphere keep the Earth at a relatively even temperature. Without the greenhouse effect, the Earth would be a frozen globe; thus, although an excess of greenhouse gas results in global warming, the naturally occurring greenhouse effect is necessary to keep our planet at a comfortable temperature.

("atmospheric lifetime"). The GWP of each gas is measured relative to carbon dioxide, the most abundant GHG; the definition of GWP for a particular GHG is the ratio of heat trapped by one unit mass of the GHG to the ratio of heat trapped by one unit mass of CO_2 over a specified time period. GHG emissions are typically measured in terms of pounds or tons of "CO_2 equivalents" (CO_2e). Table C shows the GWP for each type of GHG. For example, SF_6 is 22,800 times more potent at contributing to global warming than CO_2.

Table C: Global Warming Potential of Greenhouse Gases

Gas	Atmospheric Lifetime (Years)	Global Warming Potential (100-Year Time Horizon)
Carbon Dioxide	50-200	1
Methane	12	25
Nitrous Oxide	114	298
HFC-23	270	14,800
HFC-134a	14	1,430
HFC-152a	1.4	124
PFC: Tetrafluoromethane (CF_4)	50,000	7,390
PFC: Hexafluoromethane (C_2F_6)	10,000	12,200
Sulfur Hexafluoride (SF_6)	3,200	22,800

Source: *Climate Change 2007: The Physical Science Basis. Contribution of Working Group I to the Fourth Assessment Report of the IPCC* (Intergovernmental Panel on Climate Change, 2007).

The following discussion summarizes the characteristics of the six GHGs and black carbon.

Carbon Dioxide

In the atmosphere, carbon generally exists in its oxidized form, as CO_2. Natural sources of CO_2 include the respiration (breathing) of humans, animals and plants, volcanic out gassing, decomposition of organic matter and evaporation from the oceans. Human caused sources of CO_2 include the combustion of fossil fuels and wood, waste incineration, mineral production, and deforestation. Natural sources release approximately 150 billion tons of CO_2 each year, far outweighing the 7 billion tons of man-made emissions of CO_2 each year. Nevertheless, natural removal processes, such as photosynthesis by land- and ocean-dwelling plant species, cannot keep pace with this extra input of man-made CO_2, and consequently, the gas is building up in the atmosphere.

In 2019, total annual CO_2 accounted for approximately 83 percent of California's overall GHG emissions.[19] Transportation is the single largest source of CO_2 in California, which is primarily comprised of on-road travel. Electricity production, industrial and residential sources also make important contributions to CO_2 emissions in California.

Methane

Methane is produced when organic matter decomposes in environments lacking sufficient oxygen. Natural sources include wetlands, termites, and oceans. Decomposition occurring in landfills accounts for the majority of human-generated CH_4 emissions in California and in the United States

[19] CARB. 2021. GHGs Descriptions & Sources in California. Website: ww2.arb.ca.gov/ghg-descriptions-sources (accessed October 2022).

as a whole. Agricultural processes such as intestinal fermentation, manure management, and rice cultivation are also significant sources of CH_4 in California. Total annual emissions of CH_4 accounted for approximately 9 percent of GHG emissions in California.[20]

Nitrous Oxide

Nitrous oxide is produced naturally by a wide variety of biological sources, particularly microbial action in soils and water. Tropical soils and oceans account for the majority of natural source emissions. Nitrous oxide is a product of the reaction that occurs between nitrogen and oxygen during fuel combustion. Both mobile and stationary combustion emit N_2O, and the quantity emitted varies according to the type of fuel, technology, and pollution control device used, as well as maintenance and operating practices. Agricultural soil management and fossil fuel combustion are the primary sources of human-generated N_2O emissions in California. Nitrous oxide emissions accounted for approximately 3 percent of GHG emissions in California in 2019.[21]

Hydrofluorocarbons, Perfluorocarbons, and Sulfur Hexafluoride

HFCs are primarily used as substitutes for ozone-depleting substances regulated under the Montreal Protocol.[22] PFCs and SF_6 are emitted from various industrial processes, including aluminum smelting, semiconductor manufacturing, electric power transmission and distribution, and magnesium casting. There is no aluminum or magnesium production in California; however, the rapid growth in the semiconductor industry leads to greater use of PFCs. HFCs, PFCs, and SF_6 accounted for about 5 percent of GHG emissions in California in 2019.[23]

Black Carbon

Black carbon is the most strongly light-absorbing component of PM formed by burning fossil fuels such as coal, diesel, and biomass. Black carbon is emitted directly into the atmosphere in the form of $PM_{2.5}$ and is the most effective form of PM, by mass, at absorbing solar energy. Per unit of mass in the atmosphere, black carbon can absorb one million times more energy than CO_2.[24] Black carbon contributes to climate change both directly, such as absorbing sunlight, and indirectly, such as affecting cloud formation. However, because black carbon is short-lived in the atmosphere, it can be difficult to quantify its effect on global warming.

Most U.S. emissions of black carbon come from mobile sources (52 percent), particularly from diesel-fueled vehicles. The other major source of black carbon is open biomass burning, including wildfires,

22 The Montreal Protocol is an international treaty that was approved on January 1, 1989, and was designated to protect the ozone layer by phasing out the production of several groups of halogenated hydrocarbons believed to be responsible for ozone depletion.

23 CARB. 2021. op. cit.

24 U.S. Environmental Protection Agency (USEPA). 2015. Black Carbon, Basic Information. February 14, 2017. Website: 19january2017snapshot.epa.gov/www3/airquality/blackcarbon/basic.html (accessed October 2022).

although residential heating and industry also contribute. The CARB estimates that the annual black carbon emissions in California will be reduced approximately 50 percent below 2013 levels by 2030.[25]

Effects of Global Climate Change

Effects from global climate change may arise from temperature increases, climate-sensitive diseases, extreme weather events, and air quality. There may be direct temperature effects through increases in average temperature leading to more extreme heat waves and less extreme cold spells. Those living in warmer climates are likely to experience more stress and heat-related problems. Heat-related problems include heat rash and heat stroke. In addition, climate-sensitive diseases may increase, such as those spread by mosquitoes and other disease-carrying insects. Such diseases include malaria, dengue fever, yellow fever, and encephalitis. Extreme events such as flooding and hurricanes can displace people and agriculture. Global climate change may also contribute to air quality problems from increased frequency of smog and particulate air pollution.[26]

Additionally, according to the 2006 California Climate Action Team (CAT) Report,[27] the following applicable climate change effects, which are based on trends established by the United Nations Intergovernmental Panel on Climate Change (IPCC), can be expected in California over the course of the next century:

- The loss of sea ice and mountain snow-pack, resulting in higher sea levels and higher sea surface evaporation rates with a corresponding increase in tropospheric water vapor due to the atmosphere's ability to hold more water vapor at higher temperatures.[28]
- Rise in global average sea level, primarily due to thermal expansion and melting of glaciers and ice caps in the Greenland and Antarctic ice sheets.[29]
- Changes in weather that include widespread changes in precipitation, ocean salinity, wind patterns, and more energetic aspects of extreme weather, including droughts, heavy precipitation, heat waves, extreme cold, and the intensity of tropical cyclones.[30]
- Decline of the Sierra snowpack, which accounts for approximately one-half of the surface water storage in California by 70 percent to as much as 90 percent over the next 100 years.[31]

- Increase in the number of days conducive to O_3 formation by 25–85 percent (depending on the future temperature scenario) in high O_3 areas by the end of the 21st century.[32]

- High potential for erosion of California's coastlines and seawater intrusion into the Delta and levee systems due to the rise in sea level.[33]

A summary of these potential effects is identified in Table D.

Table D: Potential Impacts of Global Warming and Expected Consequences for California

Potential Water Resource Impacts	Anticipated Consequences Statewide
Reduction of the State's average annual snowpack	• Specifically, the decline of the Sierra snowpack would lead to a loss in half of the surface water storage in California by 70% to 90% over the next 100 years • Potential loss of 5 million acre-feet or more of average annual water storage in the State's snowpack • Increased challenges for reservoir management and balancing the competing concerns of flood protection and water supply • Higher surface evaporation rates with a corresponding increase in tropospheric water vapor
Rise in average sea level	• Potential economic impacts related to coastal tourism, commercial fisheries, coastal agriculture, and ports • Increased risk of flooding, coastal erosion along the State's coastline, seawater intrusion into the Delta and levee systems
Changes in weather	• Changes in precipitation, ocean salinity, and wind patterns • Increased likelihood for extreme weather events, including droughts, heavy precipitation, heat waves, extreme cold, and the intensity of tropical cyclones
Changes in the timing, intensity, location, amount, and variability of precipitation	• Potential increased storm intensity and increased potential for flooding • Possible increased potential for droughts • Long-term changes in vegetation and increased incidence of wildfires • Changes in the intensity and timing of runoff • Possible increased incidence of flooding and increased sedimentation • Sea level rise and inundation of coastal marshes and estuaries • Increased potential for salinity intrusion into coastal aquifers (groundwater) • Increased potential for flooding near the mouths of rivers due to backwater effects
Increased water temperatures	• Increased environmental water demand for temperature control • Possible increased problems with foreign invasive species in aquatic ecosystems • Potential adverse changes in water quality, including the reduction of dissolved oxygen levels • Possible critical effects on listed and endangered aquatic species
Changes in urban and agricultural water demand	• Changes in demand patterns and evapotranspiration
Increase in the number of days conducive to O_3 formation	• Increased temperatures • Potential health effects, including adverse impacts to respiratory systems

REGULATORY SETTING

AIR QUALITY REGULATIONS

The USEPA and the CARB regulate direct emissions from motor vehicles. The SCAQMD is the regional agency primarily responsible for regulating air pollution emissions from stationary sources (e.g., factories) and indirect sources (e.g., traffic associated with new development), as well as monitoring ambient pollutant concentrations.

Federal Regulations

Federal Clean Air Act

The 1970 federal Clean Air Act (CAA) authorized the establishment of national health-based air quality standards and also set deadlines for their attainment. The Federal Clean Air Act Amendments of 1990 changed deadlines for attaining national standards as well as the remedial actions required of areas of the nation that exceed the standards. Under the Clean Air Act, State and local agencies in areas that exceed the national standards are required to develop State Implementation Plans to demonstrate how they will achieve the national standards by specified dates.

State Regulations

California Clean Air Act

In 1988, the California Clean Air Act (CCAA) required that all air districts in the State endeavor to achieve and maintain CAAQS for CO, O_3, SO_2, and NO_2 by the earliest practical date. The California Clean Air Act provides districts with authority to regulate indirect sources and mandates that air quality districts focus particular attention on reducing emissions from transportation and area-wide emission sources. Each nonattainment district is required to adopt a plan to achieve a 5 percent annual reduction, averaged over consecutive 3-year periods, in district-wide emissions of each nonattainment pollutant or its precursors. A Clean Air Plan shows how a district would reduce emissions to achieve air quality standards. Generally, the State standards for these pollutants are more stringent than the national standards.

California Air Resources Board

The CARB is the State's "clean air agency." The CARB's goals are to attain and maintain healthy air quality, protect the public from exposure to toxic air contaminants, and oversee compliance with air pollution rules and regulations.

Assembly Bill 2588 Air Toxics "Hot Spots" Information and Assessment Act. Under Assembly Bill (AB) 2588, stationary sources of air pollutants are required to report the types and quantities of certain substances their facilities routinely released into the air. The goals of the Air Toxics "Hot Spots" Act are to collect emission data, identify facilities having localized impacts, determine health risks, and notify nearby residents of significant risks.

The California Air Resources Board Handbook. The CARB has developed an Air Quality and Land Use Handbook[34] which is intended to serve as a general reference guide for evaluating and reducing air pollution impacts associated with new projects that go through the land use decision-making process. According to the CARB Handbook, air pollution studies have shown an association between respiratory and other non-cancer health effects and proximity to high traffic roadways. Other studies have shown that diesel exhaust and other cancer-causing chemicals emitted from cars and trucks are responsible for much of the overall cancer risk from airborne toxics in California. The CARB Handbook recommends that county and city planning agencies strongly consider proximity to these sources when finding new locations for "sensitive" land uses such as homes, medical facilities, daycare centers, schools, and playgrounds.

Land uses that can produce air pollution sources of concern include freeways, rail yards, ports, refineries, distribution centers, chrome plating facilities, dry cleaners, and large gasoline service stations. Key recommendations in the CARB Handbook include taking steps to avoid siting new, sensitive land uses:

- Within 500 feet of a freeway, urban roads with 100,000 vehicles/day or rural roads with 50,000 vehicles/day;
- Within 1,000 feet of a major service and maintenance rail yard;
- Immediately downwind of ports (in the most heavily impacted zones) and petroleum refineries;
- Within 300 feet of any dry cleaning operation (for operations with two or more machines, provide 500 feet); and
- Within 300 feet of a large gas station (defined as a facility with a throughput of 3.6 million gallons per year or greater).

The CARB Handbook specifically states that its recommendations are advisory and acknowledges land use agencies have to balance other considerations, including housing and transportation needs, economic development priorities, and other quality of life issues.

The recommendations are generalized and do not consider site-specific meteorology, freeway truck percentages, or other factors that influence risk for a particular project site. The purpose of this guidance is to help land use agencies determine when to further examine project sites for actual health risk associated with the location of new sensitive land uses.

Regional Regulations

South Coast Air Quality Management District

The SCAQMD has jurisdiction over most air quality matters in the South Coast Air Basin (Basin). This area includes all of Orange County, Los Angeles County except for the Antelope Valley, the non-desert portion of western San Bernardino County, and the western and Coachella Valley portions of Riverside County. The SCAQMD is the agency principally responsible for comprehensive air pollution

[34] CARB. 2005. *Air Quality and Land Use Handbook: A Community Health Perspective.* April.

control in the Basin and is tasked with implementing certain programs and regulations required by the CAA and the CCAA. The SCAQMD prepares plans to attain CAAQS and NAAQS. SCAQMD is directly responsible for reducing emissions from stationary (area and point) sources. The SCAQMD develops rules and regulations, establishes permitting requirements, inspects emissions sources, and enforces such measures though educational programs or fines, when necessary.

The proposed project could be subject to the following SCAQMD rules and regulations:

- **Regulation IV - Prohibitions:** This regulation sets forth the restrictions for visible emissions, odor nuisance, fugitive dust, various air pollutant emissions, fuel contaminants, start-up/shutdown exemptions, and breakdown events.
    - **Rule 402 - Nuisance:** This rule restricts the discharge of any contaminant in quantities that cause or have a natural ability to cause injury, damage, nuisance, or annoyance to businesses, property, or the public.
    - **Rule 403 - Fugitive Dust:** This rule requires the prevention, reduction, or mitigation of fugitive dust emissions from a project site. Rule 403 restricts visible fugitive dust to a project property line, restricts the net PM_{10} emissions to less than 50 µg/m^3 and restricts the tracking out of bulk materials onto public roads. Additionally, Rule 403 requires an applicant to utilize one or more of the best available control measures (identified in the tables within the rule). Control measures may include adding freeboard to haul vehicles, covering loose material on haul vehicles, watering, using chemical stabilizers, and/or ceasing all activities. Finally, Rule 403 requires that a contingency plan be prepared if so determined by the USEPA. In addition, SCAQMD Rule 403(e), Additional Requirements for Large Operations, includes requirements to provide Large Operation Notification Form 403 N, appropriate signage, additional dust control measures, and employment of a dust control supervisor that has successfully completed the Dust Control training class in the South Coast Air Basin.
- **Regulation XI - Source Specific Standards:** Regulation XI sets emissions standards for different sources.
    - **Rule 1113 - Architectural Coatings:** This rule limits the amount of VOCs from architectural coatings and solvents, which lowers the emissions of odorous compounds.

The SCAQMD is responsible for demonstrating regional compliance with ambient air quality standards but has limited indirect involvement in reducing emissions from fugitive, mobile, and natural sources. To that end, the SCAQMD works cooperatively with the CARB, the Southern California Association of Governments (SCAG), county transportation commissions, local governments, and other federal and State government agencies. It has responded to this requirement by preparing a series of Air Quality Management Plans (AQMPs) to meet CAAQS and NAAQS. SCAQMD and the SCAG are responsible for formulating and implementing the AQMP for the Basin. The main purpose of an AQMP is to bring the area into compliance with federal and State air

quality standards. Every 3 years, SCAQMD prepares a new AQMP, updating the previous plan and 20-year horizon.[35]

SCAQMD approved the 2016 AQMP on March 3, 2017, and submitted the plan to CARB on March 10, 2017. Key elements of the 2016 AQMP include the following:

- Calculating and taking credit for co-benefits from other planning efforts (e.g., climate, energy, and transportation)
- A strategy with fair-share emission reductions at the federal, State, and local levels
- Investment in strategies and technologies meeting multiple air quality objectives
- Seeking new partnerships and significant funding for incentives to accelerate deployment of zero-emission and near-zero emission technologies
- Enhanced socioeconomic assessment, including an expanded environmental justice analysis
- Attainment of the 24-hour $PM_{2.5}$ standard in 2019 with no additional measures
- Attainment of the annual $PM_{2.5}$ standard by 2025 with implementation of a portion of the O_3 strategy
- Attainment of the 1-hour O_3 standard by 2022 with no reliance on "black box" future technology (CAA Section 182(e)(5) measures)

The SCAQMD is currently preparing the 2022 AQMP, which will address the requirements for meeting the 2015 O_3 standard. A Control Measures Workshop was held on November 10, 2021, to provide an overview of the control measures and strategies that are being developed/considered for the 2022 AQMP. The control measures include updated 2016 AQMP control measures and new control measures related to area, mobile, and stationary sources.

Southern California Association of Governments

SCAG is a council of governments for Los Angeles, Orange, Riverside, San Bernardino, Imperial, and Ventura Counties. It is a regional planning agency and serves as a forum for regional issues relating to transportation, the economy and community development, and the environment. SCAG is the federally designated Metropolitan Planning Organization (MPO) for the majority of the southern California region and is the largest MPO in the nation. With regard to air quality planning, SCAG prepares the Regional Transportation Plan (RTP) and Regional Transportation Improvement Program (RTIP), which address regional development and growth forecasts and form the basis for the land use and transportation control portions of the AQMP and are utilized in the preparation of the air quality forecasts and consistency analysis included in the AQMP. The RTP, RTIP, and AQMP are based on projections originating within local jurisdictions.

[35] South Coast Air Quality Management District (SCAQMD). 2016. *Final 2016 Air Quality Management Plan*. March.

Although SCAG is not an air quality management agency, it is responsible for developing transportation, land use, and energy conservation measures that affect air quality. SCAG's Regional Comprehensive Plan (RCP) provides growth forecasts that are used in the development of air quality-related land use and transportation control strategies by the SCAQMD. The RCP is a framework for decision-making for local governments, assisting them in meeting federal and State mandates for growth management, mobility, and environmental standards, while maintaining consistency with regional goals regarding growth and changes. Policies within the RCP include consideration of air quality, land use, transportation, and economic relationships by all levels of government.

SCAG adopted the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) (Connect SoCal) on September 3, 2020. Connect SoCal is a long-range visioning plan that balances future mobility and housing needs with economic, environmental, and public health goals. Connect SoCal is an important planning document for the region, allowing project sponsors to qualify for federal funding and takes into account operations and maintenance costs, to ensure reliability, longevity, and cost effectiveness. The forecasted development pattern, when integrated with the financially constrained transportation investments identified in Connect SoCal, would reach the regional target of reducing GHG emissions from autos and light-duty trucks by 19 percent by 2035 (compared to 2005 levels).

Local Regulations

City of Ontario Policy Plan

Air quality is addressed in the Environmental Resources Element of the City of Ontario Policy Plan[36]. The Policy Plan includes goals, principles, and policies that work toward clean air with minimal toxic substances and odor, clean air with minimal particulate content, effective and efficient transportation, and coordinated and cooperative intergovernmental air quality programs. The following policies from the Policy Plan would be applicable to the proposed project:

- ER4-1 *Land Use*: We reduce GHG and other local pollutant emissions through compact, mixed use, and transit-oriented development and development that improves the regional jobs-housing balance.

- ER4-2 *Sensitive Land Uses:* We prohibit the future siting of sensitive land uses, within the distances defined by the California Air Resources Board for specific source categories, without sufficient mitigation.

- ER4-3 *Greenhouse Gases (GHG) Emissions Reductions:* We will reduce GHG emissions in accordance with regional, state and federal regulations.

- ER4-4 *Indoor Air Quality:* We will comply with State Green Building Codes relative to indoor air quality.

[36] Ontario, City of. *Ontario Policy Plan, Environmental Resources Element.* Website: Ontario Plan » Policy Plan (accessed October 2022).

- ER4-5 *Transportation*: We promote mass transit and non-motorized mobility options (e.g., walking, biking) to reduce air pollutant emissions.

- ER4-5 *Particulate Matter:* We support efforts to reduce particulate matter to meet State and Federal Clean Air Standards.

- ER4-7 *Other Agency Collaboration:* We collaborate with other agencies within the South Coast Air Basin to improve regional air quality at the emission source.

- ER4-8 *Tree Planting:* We protect healthy trees within the City and plant new trees to increase carbon sequestration and help the regional/local air quality.

- ER4-9 *New Localized Air Pollution Sources Near Existing Sensitive Receptors*: We require new developments to conduct a Health Risk Assessment for land uses that generate more than 100 trucks per day or 40 trucks per day by trucks operating transportation refrigeration units (TRU's) within 1,000 feet from sensitive land uses (California Health and Safety Code § 42705.5(a)(5)). If the health risk assessment determines the new development poses health hazards that increase the incremental cancer risk above the threshold established by the South Coast Air Quality Management District (AQMD), we will only approve permits upon the condition that adequate mitigation measures are proposed and implemented for potential impacts on the sensitive uses around the site and along the route within Ontario taken by the trucks to and from freeways. We require new developments that must perform a health risk assessment to conduct additional public outreach by sending notifications in multiple languages to all residents living within 500 feet, and encourage hosting a public meeting.

ENERGY REGULATORY SETTING

Federal and State agencies regulate energy use and consumption through various means and programs. On the federal level, the U.S. Department of Transportation (USDOT), the United States Department of Energy, and the USEPA are three federal agencies with substantial influence over energy policies and programs. Generally, federal agencies influence and regulate transportation energy consumption through establishment and enforcement of fuel economy standards for automobiles and light trucks, through funding of energy-related research and development projects, and through funding for transportation infrastructure improvements. On the State level, the California Public Utilities Commission (CPUC) and the CEC are two agencies with authority over different aspects of energy.

The CPUC regulates privately owned electric, natural gas, telecommunications, water, railroad, rail transit, and passenger transportation companies and serves the public interest by protecting consumers and ensuring the provision of safe, reliable utility service and infrastructure at reasonable rates, with a commitment to environmental enhancement and a healthy California economy.

The CEC is the State's primary energy policy and planning agency. The CEC forecasts future energy needs, promotes energy efficiency, supports energy research, develops renewable energy resources, and plans for/directs state response to energy emergencies. The applicable federal, State, regional, and local regulatory framework is discussed below.

Federal Regulations

Energy Policy Act of 2005

The Energy Policy Act of 2005 seeks to reduce reliance on non-renewable energy resources and provide incentives to reduce current demand on these resources. For example, under this Act, consumers and businesses can obtain federal tax credits for purchasing fuel-efficient appliances and products (including hybrid vehicles), building energy-efficient buildings, and improving the energy efficiency of commercial buildings. Additionally, tax credits are available for the installation of qualified fuel cells, stationary microturbine power plants, and solar power equipment.

Safer Affordable Fuel-Efficient Vehicles Rule

On March 21, 2020, the USEPA and NHTSA finalized the SAFE Vehicles Rule for Model Years 2021–2026 Passenger Cars and Light Trucks (SAFE Vehicles Rule). The SAFE Vehicles Rule amends certain existing Corporate Average Fuel Economy (CAFE) and tailpipe CO_2 emissions standards for passenger cars and light trucks and establishes new standards, all covering model years 2021 through 2026. More specifically, the NHTSA set new CAFE standards for model years 2022 through 2026 and amended its 2021 model year CAFE standards, and the USEPA amended its CO_2 emissions standards for model years 2021 and later.

State Regulations

Assembly Bill 1575, Warren-Alquist Act

In 1975, largely in response to the oil crisis of the 1970s, the State Legislature adopted AB 1575 (also known as the Warren-Alquist Act), which created the CEC. The statutory mission of the CEC is to forecast future energy needs; license power plants of 50 megawatts (MW) or larger; develop energy technologies and renewable energy resources; plan for and direct State responses to energy emergencies; and, perhaps most importantly, promote energy efficiency through the adoption and enforcement of appliance and building energy efficiency standards. AB 1575 also amended Public Resources Code (PRC) Section 21100(b)(3) and *State CEQA Guidelines* Section 15126.4 to require Environmental Impact Reports (EIRs) to include, where relevant, mitigation measures proposed to minimize the wasteful, inefficient, and unnecessary consumption of energy caused by a project. Thereafter, the State Resources Agency created Appendix F to the *State CEQA Guidelines*. Appendix F assists EIR preparers in determining whether a project will result in the inefficient, wasteful, and unnecessary consumption of energy. Appendix F of the *State CEQA Guidelines* also states that the goal of conserving energy implies the wise and efficient use of energy and the means of achieving this goal, including (1) decreasing overall per capita energy consumption; (2) decreasing reliance on fossil fuels such as coal, natural gas, and oil; and (3) increasing reliance on renewable energy sources.

Senate Bill 1389, Energy: Planning and Forecasting

In 2002, the State Legislature passed Senate Bill (SB) 1389, which required the CEC to develop an integrated energy plan every 2 years for electricity, natural gas, and transportation fuels for the California Energy Policy Report. The plan calls for the State to assist in the transformation of the transportation system to improve air quality, reduce congestion, and increase the efficient use of fuel supplies with the least environmental and energy costs. To further this policy, the plan identifies a number of strategies, including assistance to public agencies and fleet operators in implementing

incentive programs for zero emission vehicles (ZEVs) and their infrastructure needs, and encouragement of urban designs that reduce vehicle miles traveled (VMT) and accommodate pedestrian and bicycle access.

In compliance with the requirements of SB 1389, the CEC adopts an Integrated Energy Policy Report every 2 years and an update every other year. The most recently adopted report includes the *2021 Integrated Energy Policy Report*[37] and the *2022 Integrated Energy Policy Report Update.*[38] The *Integrated Energy Policy Report* covers a broad range of topics, including decarbonizing buildings, integrating renewables, energy efficiency, energy equity, integrating renewable energy, updates on Southern California electricity reliability, climate adaptation activities for the energy sector, natural gas assessment, transportation energy demand forecast, and the California Energy Demand Forecast. The *Integrated Energy Policy Report* provides the results of the CEC's assessments of a variety of energy issues facing California. Many of these issues will require action if the State is to meet its climate, energy, air quality, and other environmental goals while maintaining energy reliability and controlling costs.

Renewable Portfolio Standard

SB 1078 established the California Renewable Portfolio Standards program in 2002. SB 1078 initially required that 20 percent of electricity retail sales be served by renewable resources by 2017; however, this standard has become more stringent over time. In 2006, SB 107 accelerated the standard by requiring that the 20 percent mandate be met by 2010. In April 2011, SB 2 required that 33 percent of electricity retail sales be served by renewable resources by 2020. In 2015, SB 350 established tiered increases to the Renewable Portfolio Standards of 40 percent by 2024, 45 percent by 2027, and 50 percent by 2030. In 2018, SB 100 increased the requirement to 60 percent by 2030 and required that all the State's electricity come from carbon-free resources by 2045. SB 100 took effect on January 1, 2019.[39]

Title 24, California Building Code

Energy consumption by new buildings in California is regulated by the Building Energy Efficiency Standards, embodied in Title 24 of the California Code of Regulations (CCR), known as the California Building Code (CBC). The CEC first adopted the Building Energy Efficiency Standards for Residential and Non-residential Buildings in 1978 in response to a legislative mandate to reduce energy consumption in the State. The CBC is updated every 3 years, and the current 2019 CBC went into effect on January 1, 2020. The efficiency standards apply to both new construction and rehabilitation of both residential and non-residential buildings, and regulate energy consumed for heating, cooling, ventilation, water heating, and lighting. The building efficiency standards are enforced through the local building permit process. Local government agencies may adopt and

37 CEC. 2021. *2021 Integrated Energy Policy Report*. California Energy Commission. Docket Number: 21-IEPR-01.

38 CEC. 2022. *2020 Integrated Energy Policy Report Update*. California Energy Commission. Docket Number: 22-IEPR-01.

39 California Public Utilities Commission (CPUC). 2019. Renewables Portfolio Standard Program. Website: cpuc.ca.gov/rps (accessed October 2022).

enforce energy standards for new buildings, provided these standards meet or exceed those provided in CCR Title 24.

California Green Building Standards Code (CALGreen Code)

In 2010, the California Building Standards Commission (CBSC) adopted Part 11 of the Title 24 Building Energy Efficiency Standards, referred to as the California Green Building Standards Code (CALGreen Code). The CALGreen Code took effect on January 1, 2011. The CALGreen Code is updated on a regular basis, with the most recent update consisting of the 2019 CALGreen Code standards that became effective January 1, 2020. The CALGreen Code established mandatory measures for residential and non-residential building construction and encouraged sustainable construction practices in the following five categories: (1) planning and design, (2) energy efficiency, (3) water efficiency and conservation, (4) material conservation and resource efficiency, and (5) indoor environmental quality. Although the CALGreen Code was adopted as part of the State's efforts to reduce greenhouse gas (GHG) emissions, the CALGreen Code standards have co-benefits of reducing energy consumption from residential and non-residential buildings subject to the standard.

California Energy Efficiency Strategic Plan.

On September 18, 2008, the CPUC adopted California's first Long-Term Energy Efficiency Strategic Plan, presenting a roadmap for energy efficiency in California. The Plan articulates a long-term vision and goals for each economic sector and identifies specific near-term, mid-term, and long-term strategies to assist in achieving those goals. The Plan also reiterates the following four specific programmatic goals known as the "Big Bold Energy Efficiency Strategies" that were established by the CPUC in Decisions D.07-10-032 and D.07-12-051:

- All new residential construction will be zero net energy (ZNE) by 2020.
- All new commercial construction will be ZNE by 2030.
- 50 percent of commercial buildings will be retrofitted to ZNE by 2030.
- 50 percent of new major renovations of State buildings will be ZNE by 2025.

Regional Regulations

There are no regional regulations that apply to the proposed project.

Local Regulations

City of Ontario Policy Plan

Energy is addressed in the Environmental Resources Element of the City of Ontario Policy Plan[40]. The Policy Plan includes goals and policies that work to reduce energy demands and encourage the development of renewable energy resources. The following policies from the Ontario Policy Plan would be applicable to the proposed project:

[40] Ontario, City of. Ontario Policy Plan, *Environmental Resources Element.* Website: Ontario Plan » ER3 Energy (accessed October 2022).

- ER3-1 *Conservation Strategy:* We require conservation as the first strategy to be employed to meet applicable energy-saving standards.

- ER3-2 *Green Development– Communities:* We require the use of best practices identified in green community rating systems to guide the planning and development of all new communities.

- ER3-3 *Building and Site Design:* We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar and natural ventilation.

- ER3-4 *Green Development– Public Buildings:* We require all new and substantially renovated City buildings in excess of 10,000 sq ft achieve a LEED Silver Certification standard, as determined by the U.S. Green Building Council.

- ER3-5 *Fuel Efficient and Alternative Energy Vehicles and Equipment:* We purchase and use vehicles and equipment that are fuel efficient and meet or surpass state emissions requirements and/or use renewable sources of energy.

- ER3-6 *Generation- Renewable Sources*: We promote the use of renewable energy sources to serve public and private sector development.

GLOBAL CLIMATE CHANGE REGULATORY SETTING

This section describes regulations related to Global Climate Change at the federal, State, and local level.

Federal Regulations

The United States has historically had a voluntary approach to reducing GHG emissions. However, on April 2, 2007, the United States Supreme Court ruled that the USEPA has the authority to regulate CO_2 emissions under the CAA. While there currently are no adopted federal regulations for the control or reduction of GHG emissions, the USEPA commenced several actions in 2009 to implement a regulatory approach to global climate change.

This includes the 2009 USEPA final rule for mandatory reporting of GHGs from large GHG emission sources in the United States. Additionally, the USEPA Administrator signed an endangerment finding action in 2009 under the Clean Air Act, finding that six GHGs (CO_2, CH_4, N_2O, HFCs, PFCs, SF_6) constitute a threat to public health and welfare, and that the combined emissions from motor vehicles cause and contribute to global climate change, leading to national GHG emission standards.

In October 2012, the USEPA and the NHTSA, on behalf of the U.S. Department of Transportation, issued final rules to further reduce GHG emissions and improve CAFE standards for light-duty vehicles for model years 2017 and beyond (77 *Federal Register* 62624). The NHTSA's CAFE standards have been enacted under the Energy Policy and Conservation Act since 1978. This national program requires automobile manufacturers to build a single light-duty national fleet that meets all requirements under both federal programs and the standards of California and other states. This program would increase fuel economy to the equivalent of 54.5 miles per gallon, limiting vehicle

emissions to 163 grams of CO_2 per mile for the fleet of cars and light-duty trucks by model year 2025 (77 *Federal Register* 62630).

On March 21, 2020, the USEPA and NHTSA finalized the SAFE Vehicles Rule. The SAFE Vehicles Rule amends certain existing CAFE and tailpipe CO_2 emissions standards for passenger cars and light trucks and establish new standards, all covering model years 2021 through 2026. More specifically, NHTSA set new CAFE standards for model years 2022 through 2026 and amended its 2021 model year CAFE standards, and the USEPA amended its CO_2 emissions standards for model years 2021 and later. On May 12, 2021, the NHTSA published a notice of proposed rulemaking in the *Federal Register*, proposing to repeal key portions of the SAFE Vehicles Rule that would have reduced CAFE standards. The final rule repealing portions of the SAFE Vehicles Rule was published on December 29, 2021. The repeal will allow California to set its own GHG standards if it chooses, even if the emissions standards conflict with CAFE standards enacted by the U.S. Department of Transportation.

State Regulations

The CARB is the lead agency for implementing climate change regulations in the State. Since its formation, the CARB has worked with the public, the business sector, and local governments to find solutions to California's air pollution problems. Key efforts by the State are described below.

Assembly Bill 1493 (2002)

In a response to the transportation sector's significant contribution to California's CO_2 emissions, AB 1493 was enacted on July 22, 2002. AB 1493 requires the CARB to set GHG emission standards for passenger vehicles and light duty trucks (and other vehicles whose primary use is noncommercial personal transportation in the State) manufactured in 2009 and all subsequent model years. These standards (starting in model years 2009 to 2016) were approved by the CARB in 2004, but the needed waiver of CCAA Preemption was not granted by the USEPA until June 30, 2009. The CARB responded by amending its original regulation, now referred to as Low Emission Vehicle III, to take effect for model years starting in 2017 to 2025. The Trump administration revoked California's waiver in 2019; however, the Biden administration restored California's waiver in 2021.

Executive Order S-3-05 (2005)

Governor Arnold Schwarzenegger signed Executive Order (EO) S-3-05 on June 1, 2005, which proclaimed that California is vulnerable to the impacts of climate change. To combat those concerns, the executive order established California's GHG emissions reduction targets, which established the following goals:

- GHG emissions should be reduced to 2000 levels by 2010;
- GHG emissions should be reduced to 1990 levels by 2020; and
- GHG emissions should be reduced to 80 percent below 1990 levels by 2050.

The Secretary of the California Environmental Protection Agency (CalEPA) is required to coordinate efforts of various State agencies in order to collectively and efficiently reduce GHGs. A biannual progress report must be submitted to the Governor and State Legislature disclosing the progress made toward GHG emission reduction targets. In addition, another biannual report must be submitted illustrating the impacts of global warming on California's water supply, public health,

agriculture, the coastline, and forestry, and report possible mitigation and adaptation plans to address these impacts.

The Secretary of CalEPA leads this CAT made up of representatives from State agencies as well as numerous other boards and departments. The CAT members work to coordinate statewide efforts to implement global warming emission reduction programs and the State's Climate Adaptation Strategy. The CAT is also responsible for reporting on the progress made toward meeting the statewide GHG targets that were established in the executive order and further defined under AB 32, the "Global Warming Solutions Act of 2006." The first CAT Report to the Governor and the Legislature was released in March 2006, which it laid out 46 specific emission reduction strategies for reducing GHG emissions and reaching the targets established in the Executive Order. The most recent report was released in December 2020.

Assembly Bill 32 (2006), California Global Warming Solutions Act

California's major initiative for reducing GHG emissions is AB 32, passed by the State legislature on August 31, 2006. This effort aims at reducing GHG emissions to 1990 levels by 2020. The CARB has established the level of GHG emissions in 1990 at 427 million metric tons (MMT) of CO_2e. The emissions target of 427 MMT requires the reduction of 169 MMT from the State's projected business-as-usual 2020 emissions of 596 MMT. AB 32 requires the CARB to prepare a Scoping Plan that outlines the main State strategies for meeting the 2020 deadline and to reduce GHGs that contribute to global climate change. The Scoping Plan was approved by the CARB on December 11, 2008, and contains the main strategies California will implement to achieve the reduction of approximately 169 MMT CO_2e, or approximately 30 percent, from the State's projected 2020 emissions level of 596 MMT CO_2e under a business-as-usual scenario (this is a reduction of 42 MMT CO_2e, or almost 10 percent from 2002–2004 average emissions). The Scoping Plan also includes CARB-recommended GHG reductions for each emissions sector of the State's GHG inventory. The Scoping Plan calls for the largest reductions in GHG emissions to be achieved by implementing the following measures and standards:

- Improved emissions standards for light-duty vehicles (estimated reductions of 31.7 MMT CO_2e);
- The Low-Carbon Fuel Standard (15.0 MMT CO_2e);
- Energy efficiency measures in buildings and appliances and the widespread development of combined heat and power systems (26.3 MMT CO_2e); and
- A renewable portfolio standard for electricity production (21.3 MMT CO_2e).

The Scoping Plan identifies 18 emission reduction measures that address cap-and-trade programs, vehicle gas standards, energy efficiency, low carbon fuel standards, renewable energy, regional transportation-related GHG targets, vehicle efficiency measures, goods movement, solar roof programs, industrial emissions, high speed rail, green building strategies, recycling, sustainable forests, water, and air. The measures would result in a total reduction of 174 MMT CO_2e by 2020.

On August 24, 2011, the CARB unanimously approved both the new supplemental assessment and reapproved its Scoping Plan, which provides the overall roadmap and rule measures to carry out AB 32. The CARB also approved a more robust CEQA equivalent document supporting the

supplemental analysis of the cap-and-trade program. The cap-and-trade took effect on January 1, 2012, with an enforceable compliance obligation that began January 1, 2013.

CARB has not yet determined what amount of GHG reductions it recommends from local government operations and local land use decisions; however, the Scoping Plan states that land use planning and urban growth decisions will play an important role in the State's GHG reductions because local governments have primary authority to plan, zone, approve, and permit how land is developed to accommodate population growth and the changing needs of their jurisdictions (meanwhile, CARB is also developing an additional protocol for community emissions). CARB further acknowledges that decisions on how land is used will have large impacts on the GHG emissions that will result from the transportation, housing, industry, forestry, water, agriculture, electricity, and natural gas emission sectors. The Scoping Plan states that the ultimate GHG reduction assignment to local government operations is to be determined. With regard to land use planning, the Scoping Plan expects an approximately 5.0 MMT CO_2e reduction due to implementation of SB 375.

In addition to reducing GHG emissions to 1990 levels by 2020, AB 32 directed the CARB and the CAT to identify a list of "discrete early action GHG reduction measures" that could be adopted and made enforceable by January 1, 2010. On January 18, 2007, Governor Schwarzenegger signed EO S-1-07, further solidifying California's dedication to reducing GHGs by setting a new Low Carbon Fuel Standard (LCFS). This executive order sets a target to reduce the carbon intensity of California transportation fuels by at least 10 percent by 2020 and directs the CARB to consider the LCFS as a discrete early action measure. In 2011, U.S. District Court Judge Lawrence O'Neil issued an injunction preventing implementation of the LCFS, ruling that it is unconstitutional. In 2012, the Ninth Circuit Court of Appeal stayed the District Court's injunction, allowing implementation of the LCFS. The Ninth Circuit decided to uphold the LCFS.

In June 2007, the CARB approved a list of 37 early action measures, including three discrete early action measures (LCFS, Restrictions on GWP Refrigerants, and Landfill CH_4 Capture).[41] Discrete early action measures are measures that were required to be adopted as regulations and made effective no later than January 1, 2010, the date established by Health and Safety Code Section 38560.5. The CARB adopted additional early action measures in October 2007 that tripled the number of discrete early action measures. These measures relate to truck efficiency, port electrification, reduction of PFCs from the semiconductor industry, reduction of propellants in consumer products, proper tire inflation, and SF_6 reductions from the non-electricity sector. The combination of early action measures is estimated to reduce statewide GHG emissions by nearly 16 MMT.[42]

The CARB approved the First Update to the Climate Change Scoping Plan on May 22, 2014. The First Update identifies opportunities to leverage existing and new funds to further drive GHG emission reductions through strategic planning and targeted low carbon investments. The First Update defines CARB climate change priorities until 2020, and also sets the groundwork to reach long-term goals set forth in EOs S-3-05 and B-16-2012. The Update highlights California's progress toward meeting the "near-term" 2020 GHG emission reduction goals as defined in the initial Scoping Plan. It

41 CARB. 2007. *Expanded List of Early Action Measures to Reduce Greenhouse Gas Emissions in California Recommended for Board Consideration*. October.

42 CARB. 2007. "ARB approves tripling of early action measures required under AB 32" News Release 07-46. October 25.

also evaluates how to align the State's "longer-term" GHG reduction strategies with other State policy priorities for water, waste, natural resources, clean energy, transportation, and land use. CARB released a second update to the Scoping Plan, the 2017 Scoping Plan,[43] to reflect the 2030 target set by EO B-30-15 and codified by SB 32.

CARB is currently working on an update to the 2017 Scoping Plan, which will be released this year. The 2022 Scoping Plan Update will assess progress towards achieving the SB 32 2030 target and lay out a path to achieve carbon neutrality no later than 2045.

Senate Bill 97 (2007)

SB 97, signed by the Governor in August 2007 (Chapter 185, Statutes of 2007; Public Resources Code [PRC], Sections 21083.05 and 21097), acknowledges climate change is a prominent environmental issue that requires analysis under CEQA. This bill directed the Governor's Office of Planning and Research (OPR) to prepare, develop, and transmit to the California Resources Agency guidelines for mitigating GHG emissions or the effects of GHG emissions, as required by CEQA.

The California Natural Resources Agency adopted the amendments to the *State CEQA Guidelines* in November 2018, which went into effect in December 2018. The amendments do not identify a threshold of significance for GHG emissions, nor do they prescribe assessment methodologies or specific mitigation measures. The amendments encourage lead agencies to consider many factors in performing a CEQA analysis, but preserve the discretion granted by CEQA to lead agencies in making their own determinations based on substantial evidence. The amendments also encourage public agencies to make use of programmatic mitigation plans and programs when they perform individual project analyses.

Senate Bill 375 (2008)

SB 375, the Sustainable Communities and Climate Protection Act, which establishes mechanisms for the development of regional targets for reducing passenger vehicle GHG emissions, was adopted by the State on September 30, 2008. On September 23, 2010, the CARB adopted the vehicular GHG emissions reduction targets that had been developed in consultation with the Metropolitan Planning Organization (MPOs); the targets require a 6 to 15 percent reduction by 2020 and between 13 to 19 percent reduction by 2035 for each MPO. SB 375 recognizes the importance of achieving significant GHG reductions by working with cities and counties to change land use patterns and improve transportation alternatives. Through the SB 375 process, MPOs such as the Fresno Council of Governments will work with local jurisdictions in the development of Sustainable Communities Strategy (SCS) designed to integrate development patterns and the transportation network in a way that reduces GHG emissions while meeting housing needs and other regional planning objectives. Pursuant to SB 375, the Los Angeles/Southern California reduction targets for per capita vehicular emissions were 8 percent by 2020 and are 19 percent by 2035 as shown in Table E.

Executive Order B-30-15 (2015)

Governor Jerry Brown signed EO B-30-15 on April 29, 2015, which added the immediate target of:

- GHG emissions should be reduced to 40 percent below 1990 levels by 2030.

All State agencies with jurisdiction over sources of GHG emissions were directed to implement measures to achieve reductions of GHG emissions to meet the 2030 and 2050 targets. CARB was directed to update the AB 32 Scoping Plan to reflect the 2030 target, and therefore, is moving forward with the update process. The mid-term target is critical to help frame the suite of policy measures, regulations, planning efforts, and investments in clean technologies and infrastructure needed to continue reducing emissions.

Senate Bill 350 (2015) Clean Energy and Pollution Reduction Act

SB 350, signed by Governor Jerry Brown on October 7, 2015, updates and enhances AB 32 by introducing the following set of objectives in clean energy, clean air, and pollution reduction for 2030:

- Raise California's renewable portfolio standard from 33 percent to 50 percent; and
- Increasing energy efficiency in buildings by 50 percent by the year 2030.

The 50 percent renewable energy standard will be implemented by the CPUC for the private utilities and by the CEC for municipal utilities. Each utility must submit a procurement plan showing it will purchase clean energy to displace other non-renewable resources. The 50 percent increase in energy efficiency in buildings must be achieved through the use of existing energy efficiency retrofit funding and regulatory tools already available to State energy agencies under existing law. The addition made by this legislation requires State energy agencies to plan for, and implement those programs in a manner that achieves the energy efficiency target.

Senate Bill 32, California Global Warming Solutions Act of 2016, and Assembly Bill 197

In summer 2016 the Legislature passed, and the Governor signed, SB 32, and AB 197. SB 32 affirms the importance of addressing climate change by codifying into statute the GHG emissions reductions target of at least 40 percent below 1990 levels by 2030 contained in Governor Brown's April 2015 EO B-30-15. SB 32 builds on AB 32 and keeps us on the path toward achieving the State's 2050 objective of reducing emissions to 80 percent below 1990 levels, consistent with an IPCC analysis of

the emissions trajectory that would stabilize atmospheric GHG concentrations at 450 parts per million CO_2e and reduce the likelihood of catastrophic impacts from climate change.

The companion bill to SB 32, AB 197, provides additional direction to CARB related to the adoption of strategies to reduce GHG emissions. Additional direction in AB 197 meant to provide easier public access to air emissions data that are collected by CARB was posted in December 2016.

Senate Bill 100

On September 10, 2018, Governor Brown signed SB 100, which raises California's Renewables Portfolio Standard (RPS) requirements to 60 percent by 2030, with interim targets, and 100 percent by 2045. The bill also establishes a state policy that eligible renewable energy resources and zero-carbon resources supply 100 percent of all retail sales of electricity to California end-use customers and 100 percent of electricity procured to serve all State agencies by December 31, 2045. Under the bill, the State cannot increase carbon emissions elsewhere in the western grid or allow resource shuffling to achieve the 100 percent carbon-free electricity target.

Executive Order B-55-18

EO B-55-18, signed September 10, 2018, sets a goal "to achieve carbon neutrality as soon as possible, and no later than 2045, and achieve and maintain net negative emissions thereafter." EO B-55-18 directs CARB to work with relevant state agencies to ensure future Scoping Plans identify and recommend measures to achieve the carbon neutrality goal. The goal of carbon neutrality by 2045 is in addition to other statewide goals, meaning not only should emissions be reduced to 80 percent below 1990 levels by 2050, but that, by no later than 2045, the remaining emissions be offset by equivalent net removals of CO_2e from the atmosphere, including through sequestration in forests, soils, and other natural landscapes.

Title 24, Part 11, Building Standards Code and CALGreen Code

In November 2008, the California Building Standards Commission established the California Green Building Standards Code (CALGreen Code), which sets performance standards for residential and non-residential development to reduce environmental impacts and encourage sustainable construction practices. The CALGreen Code addresses energy efficiency, water conservation, material conservation, planning and design, and overall environmental quality. The CALGreen Code is updated every 3 years and was most recently updated in 2019 to include new mandatory measures for residential as well as non-residential uses; the new measures took effect on January 1, 2020. The next set of standards will be adopted in 2022 and apply to projects seeking building permits on or after January 1, 2023.

California Building Efficiency Standards (Title 24, Part 6)

The California Building Standards Code, or Title 24 of the California Code of Regulations (CCR) contains the regulations that govern the construction of buildings in California. Within the Building Standards Code, two parts pertain to the incorporation of both energy efficient and green building elements into land use development. Part 6 is California's Energy Efficiency Standards for Residential and Non-Residential Buildings. These standards were first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption and are updated on an approximately 3-year cycle to allow consideration and possible incorporation of new energy efficient

technologies and methods. All buildings for which an application for a building permit is submitted on or after January 1, 2020, must follow the 2019 standards. The next set of standards is anticipated for release in 2022. Energy efficient buildings require less electricity; therefore, increased energy efficiency reduces fossil fuel consumption and decreases GHG emissions.

Cap and Trade

The development of a cap-and-trade program was included as a key reduction measure of the CARB AB 32 Climate Change Scoping Plan. The cap-and-trade program will help put California on the path to meet its goal of reducing GHG emissions to 1990 levels by 2020 and ultimately achieving an 80 percent reduction from 1990 levels by 2050. The cap-and-trade emissions trading program developed by the CARB took effect on January 1, 2012, with enforceable compliance obligations beginning January 1, 2013. The cap-and-trade program aims to regulate GHG emissions from the largest producers in the State by setting a statewide firm limit, or cap, on allowable annual GHG emissions. The cap was set in 2013 at approximately 2 percent below the emissions forecast for 2020. In 2014, the cap declined approximately 2 percent. Beginning in 2015 and continuing through 2020, the cap has been declining approximately 3 percent annually. The CARB administered the first auction on November 14, 2012, with many of the qualified bidders representing corporations or organizations that produce large amounts of GHG emissions, including energy companies, agriculture and food industries, steel mills, cement companies, and universities. On January 1, 2015, compliance obligation began for distributors of transportation fuels, natural gas, and other fuels. The cap-and-trade program was initially slated to sunset in 2020 but the passage of SB 398 in 2017 extended the program through 2030.

Executive Order N-79-20

EO N-79-20, which was signed by the Governor on September 23, 2020, sets the following goals for the State: 100 percent of in-state sales of new passenger cars and trucks shall be zero-emission by 2035; 100 percent of medium- and heavy-duty vehicles in the State shall be zero-emission by 2045 for all operations where feasible and by 2035 for drayage trucks; and 100 percent of off-road vehicles and equipment in the State shall be zero-emission by 2035, where feasible.

California Integrated Waste Management Act

To minimize the amount of solid waste that must be disposed of in landfills, the State Legislature passed the California Integrated Waste Management Act of 1989 (AB 939), effective January 1990. According to AB 939, all cities and counties were required to divert 25 percent of all solid waste from landfill facilities by January 1, 1995, and 50 percent by January 1, 2000. Through other statutes and regulations, this 50 percent diversion rate also applies to State agencies. In order of priority, waste reduction efforts must promote source reduction, recycling and composting, and environmentally safe transformation and land disposal. In 2011, AB 341 modified the California Integrated Waste Management Act and directed the California Department of Resources Recycling and Recovery (CalRecycle) to develop and adopt regulations for mandatory commercial recycling. The resulting 2012 Mandatory Commercial Recycling Regulation requires that on and after July 1, 2012, certain businesses that generate four cubic yards or more of commercial solid waste per week shall arrange recycling services. To comply with this requirement, businesses may either separate recyclables and self-haul them or subscribe to a recycling service that includes mixed waste processing. AB 341 also established a statewide recycling goal of 75 percent; the 50 percent disposal

reduction mandate still applies for cities and counties under AB 939, the Integrated Waste Management Act. In April 2016, AB 1826 further modified the California Integrated Waste Management Act, requiring businesses that generate a specified amount of organic waste per week to arrange for recycling services for that organic waste in a specified manner. If CalRecycle determines that statewide disposal of organic waste has not been reduced by 50 percent below 2014 levels by 2020, businesses generating more than two cubic yards of organic waste per week would be subject to these waste collection requirements. CalRecycle plans to make this assessment in the fall of 2020. Diverting organic waste from landfills reduces emissions of CH_4. This is equivalent to reducing anaerobic decomposition of organic waste that would have otherwise occurred in landfills where organic waste is often buried with other inorganic waste.

Low Carbon Fuel Standard

In January 2007, EO S-01-07 established an LCFS. This executive order calls for a statewide goal to be established to reduce the carbon intensity of California's transportation fuels by at least 10 percent by 2020, and that an LCFS for transportation fuels be established for California. The LCFS applies to all refiners, blenders, producers, or importers ("Providers") of transportation fuels in California, including fuels used by off-road construction equipment. In June 2007, CARB adopted the LCFS under AB 32 pursuant to Health and Safety Code Section 38560.5, and, in April 2009, CARB approved the new rules and carbon intensity reference values with new regulatory requirements taking effect in January 2011. The standards require providers of transportation fuels to report on the mix of fuels they provide and demonstrate they meet the LCFS intensity standards annually. This is accomplished by ensuring that the number of "credits" earned by providing fuels with a lower carbon intensity than the established baseline (or obtained from another party) is equal to or greater than the "deficits" earned from selling higher intensity fuels. In response to certain court rulings, CARB re-adopted the LCFS regulation in September 2015, and the LCFS went into effect on January 1, 2016. In 2018, CARB approved amendments to the regulation to readjust carbon intensity benchmarks to meet California's 2030 GHG reductions targets under SB 32. These amendments include opportunities to promote zero emission vehicle (ZEV) adoption, carbon capture and sequestration, and advanced technologies for decarbonization of the transportation sector.

Advanced Clean Cars Program

In January 2012, CARB approved the Advanced Clean Cars program, which combines the control of GHG emissions and criteria air pollutants, as well as requirements for greater numbers of ZEVs, into a single package of regulatory standards for vehicle model years 2017 through 2025. The new regulations strengthen the GHG standard for 2017 models and beyond. This will be achieved through existing technologies, the use of stronger and lighter materials, and more efficient drivetrains and engines. The program's ZEVs regulation requires battery, fuel cell, and/or plug-in hybrid electric vehicles to account for up to 15 percent of California's new vehicle sales by 2025. The program also includes a clean fuels outlet regulation designed to support the commercialization of zero-emission hydrogen fuel cell vehicles planned by vehicle manufacturers by 2015 by requiring increased numbers of hydrogen fueling stations throughout the State. The number of stations will grow as vehicle manufacturers sell more fuel cell vehicles. By 2025, when the rules will be fully implemented, the statewide fleet of new cars and light trucks will emit 40 percent fewer GHGs and 75 percent fewer smog-forming emissions than 2012 model year vehicles.

Executive Order B-48-18

In January 2018, Governor Brown signed EO B-48-18 requiring all State entities to work with the private sector to have at least 5 million ZEVs on the road by 2030, as well as install 200 hydrogen fueling stations and 250,000 electric vehicle charging stations by 2025. It specifies that 10,000 of the electric vehicle charging stations should be direct current fast chargers. This order also requires all State entities to continue to partner with local and regional governments to streamline the installation of ZEV infrastructure. The Governor's Office of Business and Economic Development is required to publish a Plug-in Charging Station Design Guidebook and update the 2015 Hydrogen Station Permitting Guidebook to aid in these efforts. All State entities are required to participate in updating the 2016 Zero-Emissions Vehicle Action Plan to help expand private investment in ZEV infrastructure with a focus on serving low-income and disadvantaged communities. Additionally, all State entities are to support and recommend policies and actions to expand ZEV infrastructure at residential land uses, through the LCFS Program, and recommend how to ensure affordability and accessibility for all drivers.

Regional Regulations

South Coast Air Quality Management District

In 2008, the SCAQMD formed a Working Group to identify GHG emissions thresholds for land use projects that could be used by local lead agencies in the Basin. The Working Group developed several different options that are contained in the SCAQMD 2008 draft guidance document titled Interim CEQA GHG Significance Threshold for Stationary Sources, Rules and Plans[44] that could be applied by lead agencies. On September 28, 2010, SCAQMD Working Group Meeting No. 15 provided further guidance, including a tiered approach for evaluating GHG emissions for development projects where the SCAQMD is not the lead agency. The SCAQMD has not presented a finalized version of these thresholds to the governing board.

The SCAQMD identifies the emissions level for which a project would not be expected to substantially conflict with any State legislation adopted to reduce statewide GHG emissions. As such, the utilization of a service population represents the rates of emissions needed to achieve a fair share of the State's mandated emissions reductions. Overall, the SCAQMD identifies a GHG efficiency level that, when applied statewide or to a defined geographic area, would meet the year 2020 and post-2020 emissions targets as required by AB 32 and SB 32. If projects are able to achieve targeted rates of emissions per the service population, the State will be able to accommodate expected population growth and achieve economic development objectives, while also abiding by AB 32's emissions target and future post-2020 targets.

Southern California Association of Governments

On September 3, 2020, SCAG adopted Connect SoCal–The 2020–2045 Regional Transportation Plan/Sustainable Communities Strategy (2020–2045 RTP/SCS).[45] In general, the SCS outlines a

[44] SCAQMD. 2008. Interim CEQA GHG Significance Threshold for Stationary Sources, Rules and Plans.

[45] Southern California Association of Governments (SCAG). 2020. Connect SoCal: The 2020–2045 Regional Transportation Plan/Sustainable Communities Strategy of the Southern California Association of Governments. Website: https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocal-plan_0.pdf?1606001176 (accessed October 2022).

development pattern for the region, which, when integrated with the transportation network and other transportation measures and policies, would reduce vehicle miles traveled (VMT) from automobiles and light-duty trucks and thereby reduce GHG emissions from these sources. For the SCAG region, CARB has set GHG reduction targets at 8 percent below 2005 per capita emissions levels by 2020, and 19 percent below 2005 per capita emissions levels by 2035. The RTP/SCS lays out a strategy for the region to meet these targets. Overall, the SCS is meant to provide growth strategies that will achieve the regional GHG emissions reduction targets. Land use strategies to achieve the region's targets include planning for new growth around high-quality transit areas and livable corridors, and creating neighborhood mobility areas to integrate land use and transportation and plan for more active lifestyles.[46] However, the SCS does not require that local General Plans, Specific Plans, or zoning be consistent with the SCS; SCAG is required to consider local land use controls when drafting the SCS.

Local Regulations

Ontario 2022 Community Climate Action Plan (CCAP)

The City has recently adopted the 2022 Community Climate Action Plan (CCAP)[47]. The 2022 CCAP is Ontario's strategic plan to reduce GHG emissions and foster a sustainable community through 2050 and beyond. The 2022 CCAP is an update to the 2014 CCAP, providing updated analyses and background information, an expanded set of GHG reduction strategies, and a planning horizon out to 2050. The CCAP provides strategies in various sectors to meet or exceed the State targets of reducing emissions 40 percent below 1990 levels by 2030 and 80 percent below 1990 levels by 2050. The following GHG reduction strategies would be applicable to the proposed project:

- Provide and support incentives and rebates for solar photovoltaic systems for industrial uses to encourage increased local use of renewable energy.
- Ensure that new and retrofitted large hardscaped areas, such as parking lots, incorporate trees and other green infrastructure appropriate for current and future climate conditions.
- Encourage employers to offer ridership programs, public transit passes, and telecommuting to employees.
- Encourage the use of electric vehicles by increasing access to availability of public electric vehicle charging stations.
- Evaluate the feasibility of an idling ordinance that reduces the legally allowed idling time for heavy duty trucks (greater than 26,000-pound gross vehicle weight) to 3 minutes. California law currently limits idling time to 5 minutes. Ordinance must include a violation fee and enforcement mechanisms.

47 Ontario, City of. 2022. *Ontario Community Climate Action Plan 2022.* August 16. Website: https://www.ontarioca.gov/Planning/Applications (accessed October 2022).

- Support State and regional efforts to replace diesel-powered construction and landscaping equipment with electric equipment.

- In compliance with AB 939 and the CALGreen Code, implement an ordinance requiring building projects to recycle or reuse at least 50 percent of unused or leftover building materials.

- Develop a native, drought-tolerant, and fire-resistant landscaping list and require new development or redevelopment to use this list in landscaping plans.

The CCAP will also include GHG emissions CEQA thresholds and screening tables, which will be used for future projects to determine their consistency with the CCAP. However, GHG CEQA thresholds and screening tables are not available yet. Therefore, this analysis evaluates the proposed project based on SCAQMD thresholds.

San Bernardino County Greenhouse Gas Reduction Plan

The City of Ontario is part of the regional *San Bernardino County Greenhouse Gas Reduction Plan (GGRP)* adopted in September 2021, which identifies the County's vision and goals on reducing GHG emissions in its different cities, local government facilities, and communities. In response to these initiatives, an informal project partnership, led by the San Bernardino Council of Governments (SBCOG), compiled a GHG emissions inventory and an evaluation of reduction measures that could be adopted by the 25 Partnership Cities of San Bernardino County. The Partnership has committed to undertake the following actions that will reduce GHG emissions associated with its regional (or countywide) activities:

- Prepare a baseline (2016) GHG emissions inventory for each of the 25 Partnership Jurisdictions in the County;

- Prepare a future year (2020, 2030, and 2045) GHG emissions forecasts for each of the jurisdictions;

- Develop general GHG reduction measures and jurisdiction-specific measures appropriate for each jurisdiction; and

- Develop consistent baseline in information for jurisdictions to use for their development of community climate action plans (CCAPs) meeting jurisdiction-identified reduction goals.

SETTING

This section provides the current SCAQMD attainment status, climate and air quality, ambient air quality monitoring results, and GHG emissions inventory.

ATTAINMENT STATUS

The CARB is required to designate areas of the state as attainment, nonattainment, or unclassified for all State standards. An *attainment* designation for an area signifies that pollutant concentrations did not violate the standard for that pollutant in that area. A *nonattainment* designation indicates that a pollutant concentration violated the standard at least once, excluding those occasions when a violation was caused by an exceptional event, as defined in the criteria. An *unclassified* designation signifies that data do not support either an attainment or nonattainment status. The CCAA divides districts into moderate, serious, and severe air pollution categories, with increasingly stringent control requirements mandated for each category.

The USEPA designates areas for O_3, CO, and NO_2 as either does not meet the primary standards, or cannot be classified, or better than national standards. For SO_2, areas are designated as does not meet the primary standards, does not meet the secondary standards, cannot be classified, or better than national standards.

Table F provides a summary of the attainment status for the Basin with respect to NAAQS and CAAQS.

Table F: Attainment Status of Criteria Pollutants in the South Coast Air Basin

Pollutant	State	Federal
O_3 1 hour	Nonattainment	Extreme Nonattainment
O_3 8 hour	Nonattainment	Extreme Nonattainment
PM_{10}	Nonattainment	Attainment/Maintenance
$PM_{2.5}$	Nonattainment	Serious Nonattainment
CO	Attainment	Attainment/Maintenance
NO_2	Attainment	Attainment/Maintenance
SO_2	N/A	Attainment/Unclassified
Lead	Attainment	Attainment[1]
All others	Attainment/Unclassified	Attainment/Unclassified

Source: South Coast Air Quality Management District (2018).

[1] Except in Los Angeles County.

CO = carbon monoxide
N/A = not applicable
NO_2 = nitrogen dioxide
O_3 = ozone
PM_{10} = particulate matter less than 10 microns in size
$PM_{2.5}$ = particulate matter less than 2.5 microns in size
SO_2 = sulfur dioxide

EXISTING CLIMATE AND AIR QUALITY

Air quality in the planning area is not only affected by various emission sources (e.g., mobile and industry), but also by atmospheric conditions (e.g., wind speed, wind direction, temperature, and rainfall). The combination of topography, low mixing height, abundant sunshine, and emissions from the second-largest urban area in the United States gives the Basin some of the worst air pollution in the nation.

The annual average temperature varies little throughout the Basin, ranging from the low to middle 60s°F. With a more pronounced oceanic influence, coastal areas show less variability in annual minimum and maximum temperatures than inland areas. The climatological station closest to the site is located on Upland, California.[48] The monthly average maximum temperature recorded at this station ranged from 61.8°F in January to 89.6°F in July, with an annual average maximum of 74.7°F. The monthly average minimum temperature recorded at this station ranged from 39.9°F in January to 57.7°F in August, with an annual average minimum of 48.3°F. These levels are representative of the project area.

The majority of annual rainfall in the Basin occurs between December and March. Summer rainfall is minimal and is generally limited to scattered thundershowers in coastal regions and slightly heavier showers in the eastern portion of the Basin and along the coastal side of the mountains. Average monthly rainfall at the Upland station varied from 0.1 inch in February to 0.5 inch in January, with an annual total of 0.5 inch. Patterns in monthly and yearly rainfall totals are unpredictable due to fluctuations in the weather.

The Basin experiences a persistent temperature inversion (increasing temperature with increasing altitude) as a result of the Pacific high. This inversion limits the vertical dispersion of air contaminants, holding them relatively near the ground. As the sun warms the ground and the lower air layer, the temperature of the lower air layer approaches the temperature of the base of the inversion (upper) layer until the inversion layer finally breaks, allowing vertical mixing with the lower layer. This phenomenon is observed in mid-afternoon to late afternoon on hot summer days when the air appears to clear up suddenly. Winter inversions frequently break by midmorning.

Winds in the project area blow predominantly from the south-southwest, with relatively low velocities. Wind speeds in the project area average about 5 miles per hour (mph). Summer wind speeds average slightly higher than winter wind speeds. Low average wind speeds, together with a persistent temperature inversion, limit the vertical dispersion of air pollutants throughout the Basin. Strong, dry, north or northeasterly winds, known as Santa Ana winds, occur during the fall and winter months, dispersing air contaminants. The Santa Ana conditions tend to last for several days at a time.

The combination of stagnant wind conditions and low inversions produces the greatest pollutant concentrations. On days of no inversion or high wind speeds, ambient air pollutant concentrations are the lowest. During periods of low inversions and low wind speeds, air pollutants generated in urbanized areas are transported predominantly on shore into Riverside and San Bernardino Counties. In the winter, the greatest pollution problems are CO and NO_X because of extremely low

[48] Western Regional Climate Center. Recent Climate in the West. Website: http://www.wrcc.dri.edu (accessed October 2022).

inversions and air stagnation during the night and early morning hours. In the summer, the longer daylight hours and brighter sunshine combine to cause a reaction between hydrocarbons and NO_x to form photochemical smog. Smog is a general term that is naturally occurring fog that has become mixed with smoke or pollution. In this context it is better described as a form of air pollution produced by the photochemical reaction of sunlight with pollutants that have been released into the atmosphere, especially by automotive emissions.

AIR QUALITY MONITORING RESULTS

Air quality monitoring stations are located throughout the nation and are maintained by the local air pollution control district and State air quality regulating agencies. The SCAQMD, together with the CARB, maintains ambient air quality monitoring stations in the Basin. The air quality monitoring stations closest to the project site are located at 1350 San Bernardino Road in Upland, 2330 S. Castle Harbour in Ontario, and 14360 Arrow Boulevard in Fontana, California.

Pollutant monitoring results for years 2019 to 2021 are shown in Table G. As indicated in the monitoring results, the federal PM_{10} standard had one exceedance in 2020 only. The State PM_{10} standard and the federal $PM_{2.5}$ standard had an unknown number of exceedances in the 3-year period. The State 1-hour O_3 standards were exceeded 31 times in 2019, 82 times in 2020, and an unknown number of times 2021. The State 8-hour O_3 standards were exceeded 54 times in 2019, 118 times in 2020, and an unknown number of times in 2021. The federal 8-hour O_3 standards were exceeded 52 times in 2019, 116 times in 2020, and 78 times in 2021. The CO, SO_2, and NO_2 standards were not exceeded in this area during the 3-year period.

GREENHOUSE GAS EMISSIONS INVENTORY

An emissions inventory that identifies and quantifies the primary human-generated sources and sinks of GHGs is a well-recognized and useful tool for addressing climate change. This section summarizes the latest information on global, United States, and California GHG emission inventories.

Global Emissions

Worldwide emissions of GHGs in 2018 totaled 25.6 billion metric tons of CO_2e. Global estimates are based on country inventories developed as part of the programs of the United Nations Framework Convention on Climate Change.[49]

[49] United Nations Framework Convention on Climate Change (UNFCCC). 2021. GHG Data from UNFCCC. Website: unfccc.int/process-and-meetings/transparency-and-reporting/greenhouse-gas-data/ghg-data-unfccc/ghg-data-from-unfccc (accessed October 2022).

Table G: Ambient Air Quality at Nearby Monitoring Stations

Pollutant	Standard	2019	2020	2021
Carbon Monoxide (CO)[1]				
Maximum 1-hour concentration (ppm)		1.5	1.5	1.3
Number of days exceeded:	State: > 20 ppm	0	0	0
	Federal: > 35 ppm	0	0	0
Maximum 8-hour concentration (ppm)		1.1	1.1	1.1
Number of days exceeded:	State: > 9 ppm	0	0	0
	Federal: > 9 ppm	0	0	0
Ozone (O_3)				
Maximum 1-hour concentration (ppm)		0.131	0.158	0.124
Number of days exceeded:	State: > 0.09 ppm	31	82	ND
Maximum 8-hour concentration (ppm)		0.107	0.124	0.1
Number of days exceeded:	State: > 0.07 ppm	54	118	ND
	Federal: > 0.07 ppm	52	116	78
Coarse Particulates (PM_{10})[2]				
Maximum 24-hour concentration (µg/m^3)		ND	ND	123
Number of days exceeded:	State: > 50 µg/m^3	ND	ND	ND
	Federal: > 150 µg/m^3	0	1	0
Annual arithmetic average concentration (µg/m^3)		ND	ND	ND
Exceeded for the year:	State: > 20 µg/m^3	ND	ND	ND
	Federal: > 50 µg/m^3	ND	ND	ND
Fine Particulates ($PM_{2.5}$)				
Maximum 24-hour concentration (µg/m^3)		91.1	74.0	105.8
Number of days exceeded:	Federal: > 35 µg/m^3	ND	ND	ND
Annual arithmetic average concentration (µg/m^3)		ND	ND	17.8
Exceeded for the year:	State: > 12 µg/m^3	ND	ND	Yes
	Federal: > 15 µg/m^3	ND	ND	Yes
Nitrogen Dioxide (NO_2)				
Maximum 1-hour concentration (ppm)		0.057	0.055	0.065
Number of days exceeded:	State: > 0.250 ppm	0	0	0
Annual arithmetic average concentration (ppm)		0.015	0.014	0.0147
Exceeded for the year:	Federal: > 0.053 ppm	No	No	No
Sulfur Dioxide (SO_2)[3]				
Maximum 1-hour concentration (ppm)		0.0024	0.0025	0.005
Number of days exceeded:	State: > 0.25 ppm	0	0	0
Maximum 24-hour concentration (ppm)		0.0009	0.0009	0.0009
Number of days exceeded:	State: > 0.04 ppm	0	0	0
	Federal: > 0.14 ppm	0	0	0
Annual arithmetic average concentration (ppm)		0.00041	0.00041	0.00024
Exceeded for the year:	Federal: > 0.030 ppm	No	No	No

United States Emissions

In 2019, the year for which the most recent data are available, the United States emitted about 6,558 million metric tons of CO_2e (MMT CO_2e). Overall, emissions in 2019 decreased by 1.7 percent since 2018 and were 13 percent 2005 levels. This decrease was driven largely by a decrease in emissions from fossil fuel combustion resulting from a decrease in total energy use in 2019 compared to 2018 and a continued shift from coal to natural gas and renewables in the electric power sector. Of the six major sectors – residential, commercial, agricultural, industry, transportation, and electricity generation – transportation accounted for the highest amount of GHG emissions in 2019 (approximately 29 percent), with electricity generation second at 25 percent and emissions from industry third at 23 percent.[50]

State of California Emissions

The State emitted approximately 418.2 MMT CO_2e emissions in 2019, 7.2 MMT CO_2e lower than 2018 levels and almost 13 MMT CO_2e below the 2020 GHG Limit of 431 MMT CO_2e.[51] The CARB estimates that transportation was the source of approximately 40 percent of the State's GHG emissions in 2019, followed by industrial sources at approximately 21 percent and electricity generation at 14 percent. The remaining sources of GHG emissions were agriculture at 8 percent, residential activities at 7 percent, commercial activities at 4 percent, high GWP at 5 percent, and waste at 2 percent.[52]

City of Ontario Emissions

The City of Ontario's goal is to reduce emissions to a level that is 40 percent below that of 2016 GHG emissions by 2030. The City will meet this goal subject to reduction measures that are technologically feasible and cost effective per AB 32 through a combination of State (approximately 70 percent) and local (approximately 30 percent) efforts. The City will also implement several additional local measures. Table H summarizes the 2016 emission inventory, 2030 business-as-usual (BAU) forecast, and GHG reduction results by sector. Table H shows the percent reduction in each sector's emissions in 2030 and demonstrates that Ontario will meet its emissions reduction goal. Emissions sectors with the greatest percent reduction include building energy, waste, and on-road transportation sectors.

GHG = greenhouse gas
MT CO_2e = metric tons of carbon dioxide equivalent

METHODOLOGY

The methodology used to estimate air quality, health risk, GHG, and energy impacts is described below.

CONSTRUCTION EMISSIONS

Construction activities can generate a substantial amount of air pollution. Construction activities are considered temporary; however, short-term impacts can contribute to exceedances of air quality standards. Construction activities include demolition, site preparation, earthmoving, and general construction. The emissions generated from these common construction activities include fugitive dust from soil disturbance, fuel combustion from mobile heavy-duty diesel and gasoline powered equipment, portable auxiliary equipment, and worker commute trips.

The California Emissions Estimator Model version 2020.4.0 (CalEEMod) computer program was used to calculate emissions from on-site construction equipment and emissions from worker and vehicle trips to the site. This analysis assumes that construction would begin the third quarter of 2023 and would be anticipated to last for approximately 15 months, with project operations beginning in the fourth quarter of 2024. The proposed project would include the demolition of six existing structures, totaling 77,696 sq ft, which was included in this analysis. This analysis also assumes the use of Tier 2 construction equipment and that the proposed project would comply with SCAQMD Rule 403 measures. All other construction details are not yet known; therefore, default assumptions (e.g., construction worker and truck trips and fleet activities) from CalEEMod were used.

OPERATIONAL EMISSIONS

The air quality analysis includes estimating emissions associated with long-term operation of the proposed project. Consistent with the SCAQMD guidance for estimating emissions associated with land use development projects, the CalEEMod computer program was used to calculate the long-term operational emissions associated with the project. As discussed in the Project Description section, the proposed project would replace the existing structures to construct two industrial warehouse buildings totaling approximately 238,458 sq ft of building area. Therefore, the existing conditions analysis was conducted using land code *Unrefrigerated Warehouse- No Rail*. The proposed project analysis was conducted using land use codes *Unrefrigerated Warehouse-No Rail*, *City Park*, and *Parking Lot.* Trip generation rates used in CalEEMod for the project were based on the project's Trip Generation, which identifies that the existing conditions typically generate approximately 15 average daily trips and that the proposed project would generate a total of 554 average daily trips, including 345 passenger vehicle trips, 61 two-axle truck trips, 29 three-axle truck trips, and 119 four-axle truck trips.

CONSTRUCTION HEALTH RISK ASSESSMENT

A construction health risk assessment (HRA), which evaluates construction-period health risk to off-site receptors, was performed for the proposed project. To estimate the potential cancer risk associated with construction of the proposed project from equipment exhaust (including DPM), a dispersion model was used to translate an emissions rate from the source location to a concentration at the receptor location of interest (i.e., a nearby residence and worksites). Dispersion

modeling varies from a simpler, more conservative screening-level analysis to a more complex and refined detailed analysis. This refined assessment was conducted using the CARB exposure methodology with the air dispersion modeling performed using the USEPA dispersion model AERMOD. The model provides a detailed estimate of exhaust concentrations based on site and source geometry, source emissions strength, distance from the source to the receptor, and meteorological data.

OPERATIONAL HEALTH RISK ASSESSMENT

To determine the potential health risk to people living and working near the proposed project associated with the exhaust of diesel-powered trucks and equipment, an operational HRA was conducted for the proposed project. This HRA has been conducted using three models: (1) EMFAC2021 for on-road vehicle emissions factors and percentages of fuel type within the overall vehicle fleet; (2) the USEPA AERMOD air dispersion model to determine how the TACs would move through the atmosphere after release from sources both on site and on surrounding roadways; and (3) CARB's HARP2 model to translate the pollutant concentrations from AERMOD into individual health risks at any sensitive receptor locations surrounding the project site.

The first step of an HRA is to characterize the project-related emissions of TACs. The proposed project would generate a total of 554 average daily trips, including 345 passenger vehicle trips, 61 two-axle truck trips, 29 three-axle truck trips, and 119 four-axle truck trips. The trucks would access the site by Bon View Avenue, Ontario Boulevard, and California Street. The proposed project would provide a total of 30 dock-high doors; as the project would contain multiple loading docks, off-site queuing of trucks is not anticipated. While the TAC emissions from gasoline-powered vehicles have a small health effect compared to DPM, this HRA includes both gasoline- and diesel-powered vehicle emissions. For the diesel exhaust emissions, it is sufficient to only consider the DPM (PM_{10} and $PM_{2.5}$) portions of the exhaust; all the TACs for the gasoline exhaust emissions are contained in the ROG emissions. Using speciation data from CARB, the emission rates of the TAC components are derived from the total ROG emissions. These data are attached.

Project trucks would operate in two modes: stationary idling and moving on and off the site. The emissions from trucks while idling result in a much higher concentration of TACs at nearby sensitive receptors compared to the emissions from moving trucks. This is due to the dispersion of emissions that occurs with distance and with travel of the vehicle. For this HRA, the truck travel emissions were modeled as a series of volume sources along the on-site driveway, along Bon View Avenue going north and south, Ontario Boulevard going east and west, and California Street going east and west. LSA assumed vehicles traveling on site would maneuver slowly, averaging approximately 5–15 miles per hour (mph), and that vehicles traveling on roadways would average 5–55 mph.

The idling emissions of trucks operating on the project site were modeled as point sources within the area sources representing the planned loading docks. EMFAC2021 was used to determine the emissions factors of idling and operating diesel trucks to determine the total emissions of DPM. While it is expected that the truck emissions rate will continue to reduce over time, an HRA only allows for a single emission rate to represent the entire 30-year exposure period. The use of emissions factors for the year 2022, was used as a conservative estimate of emissions, although, the project is not expected to be fully operational until 2024.

ENERGY USE

The analysis of electricity/natural gas usage is based on the CalEEMod modeling, which quantifies energy use for project operations. Fuel consumption (diesel fuel and gasoline) from vehicle trips during operation was estimated for the opening year (2024) of the proposed project based on trip estimates from the CalEEMod model and fuel efficiencies from the CARB's EMFAC2021 model. Estimates of fuel consumption (diesel fuel and gasoline) from construction trucks and construction worker vehicles were based on trip estimates from the CalEEMod model and fuel efficiencies from the CARB EMFAC2021 model.

The analysis focuses on the four sources of energy that are relevant to the proposed project: electricity, natural gas, project construction equipment fuel, and vehicle fuel necessary for project operations. For the purposes of this analysis, the amount of electricity, natural gas, construction fuel, and fuel use from operations are quantified and compared to that consumed in Los Angeles County. The electricity/natural gas use of the proposed project is analyzed as a whole on an annual basis.

GREENHOUSE GAS ANALYSIS

Recognizing that the field of global climate change analysis is rapidly evolving, the approaches advocated most recently indicate that for determining a project's contribution to GHG emissions, lead agencies should calculate, or estimate, emissions from vehicular traffic, energy consumption, water conveyance and treatment, waste generation, construction activities, and any other significant source of emissions within the project area. The CalEEMod results were used to quantify GHG emissions generated by the project.

THRESHOLDS OF SIGNIFICANCE

The *State CEQA Guidelines* indicate that a project would normally have a significant adverse air quality impact if project-generated pollutant emissions would:

- Conflict with or obstruct implementation of the applicable air quality plan;
- Result in a cumulatively considerable net increase of any criteria pollutant for which the project is nonattainment under applicable federal or state ambient air quality standards;
- Expose sensitive receptors to substantial pollutant concentrations; or
- Result in other emissions (such as those leading to odors) affecting a substantial number of people.

The *State CEQA Guidelines* indicate that a project would normally have a significant adverse energy impact if the project would:

- Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation.
- Conflict with or obstruct a state or local plan for renewable energy or energy efficiency.

The *State CEQA Guidelines* indicate that a project would normally have a significant adverse greenhouse gas emission impact if the project would:

- Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment; or
- Conflict with an applicable plan, policy or regulation adopted for the purpose of reduction the emissions of greenhouse gases.

Certain air districts (e.g., SCAQMD) have created guidelines and requirements to conduct air quality analysis. The SCAQMD's current guidelines, the *CEQA Air Quality Handbook* with associated updates, were followed in this assessment of air quality and GHG impacts for the proposed project.

CRITERIA POLLUTANT THRESHOLDS

SCAQMD has established daily emissions thresholds for construction and operation of a proposed project in the Basin. The emissions thresholds were established based on the attainment status of the Basin with regard to air quality standards for specific criteria pollutants. Because the concentration standards were set at a level that protects public health with an adequate margin of safety, these emissions thresholds are regarded as conservative and would overstate an individual project's contribution to health risks.

Table I lists the CEQA significance thresholds for construction and operational emissions established for the Basin. Projects in the Basin with construction- or operation-related emissions that exceed any of their respective emission thresholds would be considered significant under SCAQMD guidelines. These thresholds, which SCAQMD developed and that apply throughout the Basin, apply as both project and cumulative thresholds. If a project exceeds these standards, it is considered to have a project-specific and cumulative impact.

Table I: Regional Thresholds for Construction and Operational Emissions

Emissions Source	Pollutant Emissions Threshold (lbs/day)					
	VOC	NO_x	CO	PM_{10}	$PM_{2.5}$	SO_x
Construction	75	100	550	150	55	150
Operations	55	55	550	150	55	150

VOC = volatile organic compounds

HEALTH RISK THRESHOLDS

The following limits for maximum individual cancer risk (MICR) and noncancer acute and chronic Hazard Index (HI) from project emissions of TACs are considered appropriate for use in determining the health risk for projects in the Basin:

- **MICR:** MICR is the estimated probability of a maximally exposed individual (MEI) contracting cancer as a result of exposure to TACs over a period of 30 years for adults and 9 years for children in residential locations and over a period of 25 years for workers. The MICR calculations include multipathway consideration, when applicable.

  The cumulative increase in MICR that is the sum of the calculated MICR values for all TACs would be considered significant if it would result in an increased MICR greater than 10 in 1 million (1×10^{-5}) at any receptor location.

- **Chronic HI:** Chronic HI is the ratio of the estimated long-term level of exposure to a TAC for a potential MEI to its chronic reference exposure level. The chronic HI calculations include multipathway consideration, when applicable.

  The project would be considered significant if the cumulative increase in total chronic HI for any target organ system would exceed 1.0 at any receptor location.

- **Acute HI:** Acute HI is the ratio of the estimated maximum 1-hour concentration of a TAC for a potential MEI to its acute reference exposure level.

  The project would be considered significant if the cumulative increase in total acute HI for any target organ system would exceed 1.0 at any receptor location.

The SCAQMD *CEQA Air Quality Handbook*[53] states that emissions of TACs are considered significant if an HRA shows an increased risk of greater than 10 in 1 million. Based on guidance from SCAQMD in the document *Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis*[54], for the purposes of this analysis, the threshold of 10 in 1 million was used as the cancer risk threshold for the proposed project.

LOCALIZED IMPACTS ANALYSIS

The SCAQMD published its Final Localized Significance Threshold Methodology in July 2008, recommending that all air quality analyses include an assessment of air quality impacts to nearby sensitive receptors.[55] This guidance was used to analyze potential localized air quality impacts associated with construction of the proposed project. Localized significance thresholds (LST) are developed based on the size or total area of the emission source, the ambient air quality in the source receptor area, and the distance to the project. Sensitive receptors include residences, schools, hospitals, and similar uses that are sensitive to adverse air quality.

LSTs are based on the ambient concentrations of that pollutant within the project source receptor area (SRA) and the distance to the nearest sensitive receptor. For the proposed project, the appropriate SRA for the LST is the nearby Southwest San Bernardino Valley area (SRA 33). SCAQMD provides LST screening tables for 25, 50, 100, 200, and 500-meter source-receptor distances. As identified above, the closest sensitive receptors to the project site are residential uses such as a single-family home located approximately 179 feet south of the project site opposite East California Street. Further single-family homes are located south of the project site about 540 feet opposite Mission Boulevard. Based on the anticipated construction equipment, it is assumed that the maximum daily disturbed acreage for the proposed project would be 3.5 acres during construction.[56] Table J lists the emissions thresholds that apply during project construction and operation.

Table J: SCAQMD Localized Significance Thresholds

Emissions Source	Pollutant Emissions Threshold (lbs/day)			
	NO_x	CO	PM_{10}	$PM_{2.5}$
Construction	258.0	2,605.0	37.0	11.0
Operations	258.0	2,065.0	9.1	2.7

LOCAL MICROSCALE CONCENTRATION STANDARDS

The significance of localized project impacts under CEQA depends on whether ambient CO levels in the vicinity of the project are above or below State and federal CO standards. Because ambient CO levels are below the standards throughout the Basin, a project would be considered to have a significant CO impact if project emissions result in an exceedance of one or more of the 1-hour or 8-hour standards. The following are applicable local emission concentration standards for CO:

- California State 1-hour CO standard of 20 parts per million (ppm)
- California State 8-hour CO standard of 9 ppm

GLOBAL CLIMATE CHANGE

To provide guidance to local lead agencies on determining significance for GHG emissions in their CEQA documents, SCAQMD convened a GHG CEQA Significance Threshold Working Group (Working Group). Based on the last Working Group meeting held in September 2010 (Meeting No. 15), SCAQMD proposed to adopt a tiered approach for evaluating GHG emissions for development projects where SCAQMD is not the lead agency:

- **Tier 1. Exemptions:** If a project is exempt from CEQA, project-level and cumulative GHG emissions are less than significant.

- **Tier 2. Consistency with a locally adopted GHG Reduction Plan:** If the project complies with a GHG emissions reduction plan or mitigation program that avoids or substantially reduces GHG emissions in the project's geographic area (i.e., city or county), project-level and cumulative GHG emissions are less than significant.

- **Tier 3. Numerical Screening Threshold:** If GHG emissions are less than the numerical screening-level threshold, project-level and cumulative GHG emissions are less than significant.

  For projects that are not exempt or where no qualifying GHG reduction plans are directly applicable, SCAQMD requires an assessment of GHG emissions. SCAQMD, under Option 1, is proposing a "bright-line" screening-level threshold of 3,000 metric tons (MT) of CO_2e (or MT CO_2e) per year (or MT CO_2e per year) for all land use types or, under Option 2, the following land-use-specific thresholds: 1,400 MT CO_2e commercial projects; 3,500 MT CO_2e for residential projects; or 3,000 MT CO_2e for mixed-use projects. This bright-line threshold is based on a review of the Governor's Office of Planning and Research database of CEQA projects. Based on their review of 711 CEQA projects, 90 percent of CEQA projects would exceed the bright-line thresholds identified above. Therefore, projects that do not exceed the bright-line threshold would have a nominal and therefore less than cumulatively considerable impact on GHG emissions.

- **Tier 4. Performance Standards:** If emissions exceed the numerical screening threshold, a more detailed review of the project's GHG emissions is warranted. SCAQMD has proposed an efficiency target for projects that exceed the bright-line threshold. The current recommended approach is per capita efficiency targets. SCAQMD is not recommending use of a percent emissions reduction target. Instead, SCAQMD proposes a 2020 efficiency target of 4.8 MT CO_2e

per year per service population (for project-level analyses and 6.6 MT CO_2e per year per service population for plan-level projects (e.g., program-level projects such as general plans). The GHG efficiency metric divides annualized GHG emissions by the service population, which is the sum of residents and employees, per the following equation:

Rate of Emission: GHG Emissions (MT CO_2e per year) ÷ Service Population

The efficiency evaluation consists of comparing the project's efficiency metric to efficiency targets. Efficiency targets represent the maximum quantity of emissions each resident and employee in the State of California could emit in various years based on emissions levels necessary to achieve the statewide GHG emissions reduction goals. A project that results in a lower rate of emissions would be more efficient than a project with a higher rate of emissions, based on the same service population. The metric considers GHG reduction measures integrated into a project's design and operation (or through mitigation). The per capita efficiency targets are based on the AB 32 GHG reduction target and 2020 GHG emissions inventory prepared for the CARB's 2008 Scoping Plan.

For the purpose of this analysis, the proposed project will be compared to the screening-level Tier 3 Numerical Screening Threshold of 3,000 MT CO_2e per year for all land use types. The project is also evaluated for compliance with the 2017 Scoping Plan.

IMPACTS ANALYSIS

This section identifies the air quality, energy, and GHG emissions impacts associated with implementation of the proposed project.

AIR QUALITY IMPACTS

Air pollutant emissions associated with the project would occur over the short term from construction activities and over the long term from operational activities associated with the proposed land uses.

Consistency with Applicable Air Quality Plans

The Ontario Plan 2050 FSEIR found that The Ontario Plan 2050 would be inconsistent with the SCAQMD AQMP because buildout under the plan would cumulatively contribute to the nonattainment designations of the basin. The Ontario Plan 2050 FSEIR found that incorporation of The Ontario Plan 2050 FSEIR Mitigation Measures 3-2 and AQ-1 into future development projects for the operation phase would reduce criteria air pollutant emissions associated with buildout. Additionally, it was determined that goals and policies in The Ontario Plan 2050 would promote increased capacity for alternative transportation modes. However, The Ontario Plan 2050 FSEIR determined that due to the magnitude of residential units that would be developed under The Ontario Plan 2050, no additional mitigation measures are available that would reduce impacts below SCAQMD thresholds. As such, impacts were found to be significant and unavoidable.

A consistency determination plays an essential role in local agency project review by linking local planning and unique individual projects to the air quality plans. A consistency determination fulfills the CEQA goal of fully informing local agency decision-makers of the environmental costs of the project under consideration at a stage early enough to ensure that air quality concerns are addressed. Only new or amended General Plan elements, Specific Plans, and significantly unique projects need to undergo a consistency review due to the air quality plan strategy being based on projections from local General Plans.

The AQMP is based on regional growth projections developed by SCAG. The proposed project would include 238,458 sq ft of warehouse uses. The proposed project would not house more than 1,000 persons, occupy more than 40 acres of land, or encompass more than 650,000 sq ft of floor area. Thus, the proposed project would not be defined as a regionally significant project under CEQA; therefore, it does not meet SCAG's Intergovernmental Review criteria.

The City's General Plan is consistent with the SCAG Regional Comprehensive Plan Guidelines and the SCAQMD AQMP. Pursuant to the methodology provided in the SCAQMD *CEQA Air Quality Handbook*, consistency with the Basin 2016 AQMP is affirmed when a project (1) would not increase the frequency or severity of an air quality standards violation or cause a new violation and (2) is consistent with the growth assumptions in the AQMP. Consistency review is presented as follows:

1. The project would result in short-term construction and long-term operational pollutant emissions that are all less than the CEQA significance emissions thresholds established by SCAQMD, as demonstrated below; therefore, the project in would not result in an increase in

the frequency or severity of an air quality standards violation or cause a new air quality standard violation.

2. The *CEQA Air Quality Handbook* indicates that consistency with AQMP growth assumptions must be analyzed for new or amended General Plan elements, Specific Plans, and significant projects. Significant projects include airports, electrical generating facilities, petroleum and gas refineries, designation of oil drilling districts, water ports, solid waste disposal sites, and offshore drilling facilities; therefore, the proposed project is not defined as significant. In addition, the proposed project would not require a change to the General Plan land use designation or the current zoning, and would be consistent with the City's General Plan and Zoning Ordinance.

Based on the consistency analysis presented above, the proposed project would be consistent with the regional AQMP. The proposed project would also be required to comply with The Ontario Plan 2050 FSEIR Mitigation Measures 3-2 and AQ-1, which would ensure that the proposed project's potential construction and operational air quality impacts would be less than significant. Therefore, the proposed project would not lead to new or more severe impacts associated with clean air plan consistency beyond those identified in The Ontario Plan 2050 FSEIR.

Criteria Pollutant Analysis

The Basin is designated as non-attainment for O_3 and $PM_{2.5}$ for federal standards and non-attainment for O_3, PM_{10}, and $PM_{2.5}$ for State standards. The SCAQMD's nonattainment status is attributed to the region's development history. Past, present, and future development projects contribute to the region's adverse air quality impacts on a cumulative basis. By its very nature, air pollution is largely a cumulative impact. No single project is sufficient in size to, by itself, result in nonattainment of ambient air quality standards. Instead, a project's individual emissions contribute to existing cumulatively significant adverse air quality impacts. If a project's contribution to the cumulative impact is considerable, then the project's impact on air quality would be considered significant.

In developing thresholds of significance for air pollutants, the SCAQMD considered the emission levels for which a project's individual emissions would be cumulatively considerable. If a project exceeds the identified significance thresholds, its emissions would be cumulatively considerable, resulting in significant adverse air quality impacts to the region's existing air quality conditions. Therefore, additional analysis to assess cumulative impacts is unnecessary. The following analysis assesses the potential project-level construction- and operation-related air quality impacts.

Construction Emissions

The Ontario Plan 2050 FSEIR determined that buildout in accordance with The Ontario Plan 2050 would generate short-term emissions that would exceed the SCAQMD's regional significance thresholds and cumulatively contribute to the nonattainment designations of the basin. The Ontario Plan 2050 FSEIR found that The Ontario Plan 2050 FSEIR Mitigation Measure 3-1 and The Ontario Plan 2050 goals and policies would reduce construction-related air pollutant emissions to the extent feasible. However, The Ontario Plan 2050 FSEIR determined that individual projects accommodated under The Ontario Plan 2050 may exceed the SCAQMD regional significance thresholds. Therefore, it was determined that construction-related regional air quality impacts of developments that would be accommodated by The Ontario Plan 2050 FSEIR would be significant and unavoidable.

Similar to the impacts discussed in The Ontario Plan 2050 FSEIR, during construction, short-term degradation of air quality may occur due to the release of particulate emissions generated by demolition, grading, paving, building, and other activities. Emissions from construction equipment are also anticipated and would include CO, NO_X, ROG, directly-emitted particulate matter ($PM_{2.5}$ and PM_{10}), and TACs such as diesel exhaust particulate matter.

Project construction activities would include demolition, grading, site preparation, building, paving, and architectural coating activities. Construction-related effects on air quality from the proposed project would be greatest during the site preparation phase due to the disturbance of soils. If not properly controlled, these activities would temporarily generate particulate emissions. Sources of fugitive dust would include disturbed soils at the construction site. Unless properly controlled, vehicles leaving the site would deposit dirt and mud on local streets, which could be an additional source of airborne dust after it dries. PM_{10} emissions would vary from day to day, depending on the nature and magnitude of construction activity and local weather conditions. PM_{10} emissions would depend on soil moisture, silt content of soil, wind speed, and the amount of operating equipment. Larger dust particles would settle near the source, while fine particles would be dispersed over greater distances from the construction site.

Water or other soil stabilizers can be used to control dust, resulting in emission reductions of 50 percent or more. The SCAQMD has established Rule 403: Fugitive Dust, which would require the applicant to implement measures that would reduce the amount of PM generated during the construction period.

In addition to dust-related PM_{10} emissions, heavy trucks and construction equipment powered by gasoline and diesel engines would generate CO, SO_2, NO_x, VOCs and some soot particulate ($PM_{2.5}$ and PM_{10}) in exhaust emissions. If construction activities were to increase traffic congestion in the area, CO and other emissions from traffic would increase slightly while those vehicles idle in traffic. These emissions would be temporary in nature and limited to the immediate area surrounding the construction site.

Construction emissions were estimated for the project using CalEEMod. Table K lists the tentative project construction schedule based on a 15-month project duration. Table L lists the potential construction equipment to be used during project construction under each phase of construction. Other precise details of construction activities are unknown at this time; therefore, default settings (e.g., construction equipment) from CalEEMod were assumed. Table M identifies the total annual emissions associated with construction activities. CalEEMod output sheets are included in Appendix A.

Table K: Tentative Project Construction Schedule

Phase Number	Phase Name	Phase Start Date	Phase End Date	Number of Days/Week	Number of Days
1	Demolition	7/3/2023	7/14/2023	5	10

SCAQMD Thresholds	75.0	100.0	550.0	150.0	150.0	55.0
Exceeds?	**No**	**No**	**No**	**No**	**No**	**No**

Source: Compiled by LSA (October 2022).
Note: Maximum emissions of VOC occurred during the overlapping building construction and architectural coating phases.
CO = carbon monoxide
lbs/day = pounds per day
NO_X = nitrogen oxides
$PM_{2.5}$ = particulate matter less than 2.5 microns in size
PM_{10} = particulate matter less than 10 microns in size
SCAQMD = South Coast Air Quality Management District
SO_X = sulfur oxides
VOC = volatile organic compounds

As shown in Table M, construction emissions associated with the project would not exceed the SCAQMD thresholds for VOC, NO_x, CO, sulfur oxides (SO_X), $PM_{2.5,}$ or PM_{10} emissions. In addition to the construction period thresholds of significance, the project is required to comply with regional rules that assist in reducing short-term air pollutant emissions. In addition, the proposed project would also be required to comply with The Ontario Plan 2050 FSEIR Mitigation Measure 3-1, which requires the implementation of SCAQMD Rule 403, which requires that fugitive dust be controlled with best-available control measures so that the presence of such dust does not remain visible in the atmosphere beyond the property line of the emission source. In addition, SCAQMD Rule 403 requires implementation of dust suppression techniques to prevent fugitive dust from creating a nuisance off site. Even though the project's construction would not exceed any of the emissions thresholds as noted in Table M, compliance with The Ontario Plan 2050 FSEIR Mitigation Measure 3-1 and SCAQMD Rule 403 dust suppression techniques can further reduce the fugitive dust generation (and thus, the PM_{10} component). With compliance with The Ontario Plan 2050 FSEIR Mitigation Measure 3-1 and SCAQMD Rule 403, construction of the proposed project would not result in emissions that would result in a cumulatively considerable net increase of any criteria pollutant for which the project is in nonattainment under an applicable federal or State ambient air quality standard. Therefore, the proposed project would not lead to new or substantially more severe significant impacts associated with construction-related air quality beyond those identified in The Ontario Plan 2050 FSEIR.

Operational Air Quality Impacts

The Ontario Plan 2050 FSEIR found that buildout in accordance with The Ontario Plan 2050 would generate long-term emissions that would exceed the SCAQMD's regional significance thresholds and cumulatively contribute to the nonattainment designations of the basin. The Ontario Plan 2050 FSEIR identified that Mitigation Measure 3-2 and AQ-1, in addition to the goals and policies of The Ontario Plan 2050, would reduce air pollutant emissions to the extent feasible. However, The Ontario Plan 2050 FSEIR found that impacts would remain significant and unavoidable due to the increase in VOCs from residential development associated with The Ontario Plan 2050.

The proposed project would not include residential development; however, similar to The Ontario Plan 2050, the proposed project would generate long-term air pollutant emission impacts associated with mobile sources (e.g., vehicle trips), energy sources (e.g., natural gas), and area sources (e.g., architectural coatings and the use of landscape maintenance equipment).

PM_{10} emissions result from running exhaust, tire and brake wear, and the entrainment of dust into the atmosphere from vehicles traveling on paved roadways. Entrainment of PM_{10} occurs when vehicle tires pulverize small rocks and pavement and the vehicle wakes generate airborne dust. The contribution of tire and brake wear is small compared to the other PM emission processes. Gasoline-powered engines have small rates of PM emissions compared with diesel-powered vehicles.

Energy source emissions result from activities in buildings for which electricity and natural gas are used. The quantity of emissions is the product of usage intensity (i.e., the amount of natural gas) and the emission factor of the fuel source. Major sources of energy demand for the proposed project could include building mechanical systems, such as heating and air conditioning.

Typically, area source emissions consist of direct sources of air emissions located at the project site, including architectural coatings, consumer products, and the use of landscape maintenance equipment.

Long-term operation emissions associated with the proposed project were calculated using CalEEMod. Model results are shown in Table N below. CalEEMod output sheets are included in Appendix A.

Table N: Project Operational Emissions

Emission Type	Pollutant Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Existing Uses Operational Emissions						
Area Sources	1.3	<0.1	<0.1	0.0	0.0	0.0
Energy Sources	<0.1	<0.1	<0.1	<0.1	<0.1	<0.1
Mobile Sources	<0.1	0.1	0.5	<0.1	0.1	<0.1
Total Existing Emissions	**1.3**	**0.1**	**0.5**	**<0.1**	**0.1**	**<0.1**
Proposed Project Operational Emissions						
Area Sources	5.4	<0.1	<0.1	0.0	<0.1	<0.1
Energy Sources	0.1	0.5	0.4	<0.1	<0.1	<0.1
Mobile Sources	2.1	11.9	22.2	0.1	5.4	1.5
Total Project Emissions	**7.6**	**12.4**	**22.6**	**0.1**	**5.4**	**1.5**
Net Operational Emissions	**6.3**	**12.3**	**22.1**	**0.1**	**5.3**	**1.5**
SCAQMD Thresholds	55.0	55.0	550.0	150.0	150.0	55.0
Significant?	**No**	**No**	**No**	**No**	**No**	**No**

Source: Compiled by LSA (October 2022).
CO = carbon monoxide
NO_X = nitrogen oxides
$PM_{2.5}$ = particulate matter less than 2.5 microns in size
PM_{10} = particulate matter less than 10 microns in size
SCAQMD = South Coast Air Quality Management District
SO_X = sulfur oxides
ROG = volatile organic compounds

The results shown in Table N indicate the project would not exceed the significance criteria for VOC, NO_X, CO, SO_X, PM_{10}, or $PM_{2.5}$ emissions; thus, the proposed project would not have a significant effect on regional air quality. The proposed project would also be required to comply with The Ontario Plan 2050 FSEIR Mitigation Measures 3-2 and AQ-1, which would ensure that the proposed project's potential operational air quality impacts would be less than significant. Therefore, operation of the project would not result in a cumulatively considerable net increase of any criteria pollutant for which the project is nonattainment under an applicable federal or State ambient air quality standard. Therefore, the proposed project would not lead to new or more severe operational air quality impacts beyond those identified in The Ontario Plan 2050 FSEIR.

Localized Significance Analysis

The SCAQMD recommends the evaluation of localized air quality impacts to sensitive receptors such as residential land uses in the immediate vicinity of a project site as a result of construction activities. The thresholds are based on standards established by the SCAQMD in its LST Methodology and are measured against emissions that occur on a specific project site. However, the LSTs are applicable to projects at the project-specific level and are not applicable to programmatic

documents, such as The Ontario Plan 2050. As such, The Ontario Plan 2050 FSEIR did not evaluate potential LST impacts.

Project construction and operation emissions were compared to the LST screening tables in SRA 4, based on a 25-meter source-receptor distance and a disturbed acreage of 3.5 acres for construction and 5.0 acres for operation. The results of the LST analysis, summarized in Table O and Table P, indicate that the project would not result in an exceedance of the SCAQMD LSTs during project construction or operation. Therefore, the proposed project would not lead to new or more severe LST impacts beyond those identified in The Ontario Plan 2050 FSEIR.

Table O: Project Localized Construction Emissions (in Pounds Per Day)

Health Risk on Nearby Sensitive Receptors

As discussed in The Ontario Plan 2050 FSEIR, buildout of The Ontario Plan 2050 FSEIR could expose sensitive receptors to substantial concentrations of TACs. Buildout could result in new sources of criteria air pollutant emissions and/or TACs near existing or planned sensitive receptors. In addition, The Ontario Plan 2050 FSEIR found that Policy ER-4.9, New Localized Air Pollution Sources Near Existing Sensitive Receptors, would ensure mobile sources of TACs not covered under SCAQMD permits are considered during subsequent project-level environmental review by the City of Ontario. The Ontario Plan 2050 FSEIR concluded that individual development projects would be required to achieve the incremental risk thresholds established by SCAQMD, and TACs would be less than significant. However, The Ontario Plan 2050 FSEIR found that implementation of The Ontario Plan 2050 would generate TACs that could contribute to elevated levels in the air basin. While individual projects would achieve the project-level risk threshold of 10 per million, it was determined that they would nonetheless contribute to the higher levels of cancer risk in the basin;

and therefore, result in a cumulatively considerable impact. Therefore, impacts related to cumulative contribution to health risk was determined to be significant and unavoidable.

Sensitive receptors are defined as people that have an increased sensitivity to air pollution or environmental contaminants. Sensitive receptor locations include schools, parks and playgrounds, daycare centers, nursing homes, hospitals, and residential dwelling units. The closest sensitive receptors to the project site are residential uses such as a single-family home located approximately 179 feet south of the project site opposite East California Street. Further single-family homes are located south of the project site about 540 feet opposite of Mission Boulevard.

The following section describes the potential impacts on sensitive receptors from construction and operation of the proposed project. The HRA analysis and results are presented below; data outputs are included in Appendix B.

Construction Health Risk Assessment

A construction HRA, which evaluates construction-period health risk to off-site receptors, was performed for the proposed project. Table Q, below, identifies the results of the analysis assuming the use of Tier 2 construction equipment, as proposed by the project, at the MEI, which is the nearest sensitive receptor. Model snap shots of the sources are shown in Appendix B.

Table Q: Unmitigated Health Risks from Project Construction to Off-Site Receptors

Location	Carcinogenic Inhalation Health Risk in One Million	Chronic Inhalation Hazard Index	Acute Inhalation Hazard Index
Worker Receptor Risk	0.97	0.046	0.000
Sensitive Receptor Risk	18.20	0.015	0.000
SCAQMD Significance Threshold	**10.0 in one million**	**1.0**	**1.0**
Significant?	**Yes**	**No**	**No**

Source: LSA (October 2022).
SCAQMD = South Coast Air Quality Management District

As shown in Table Q, the maximum cancer risk for the sensitive receptor MEI would be 18.20 in one million, which would exceed the SCAQMD cancer risk threshold of 10 in one million. The worker receptor risk would be lower at 0.97 in one million, which would not exceed the threshold. The total chronic hazard index would be 0.046 for the worker receptor MEI and 0.015 for the sensitive receptor MEI, which would both be below the threshold of 1.0. In addition, the total acute hazard index would be nominal (0.000), which would also not exceed the threshold of 1.0. As indicated above, the cancer risk of 18.2 in one million would exceed SCAQMD thresholds. Therefore, mitigation would be required to reduce substantial pollutant concentrations during project construction.

As discussed above, The Ontario Plan 2050 FSEIR Mitigation Measures 3-1 and AQ-1, which require that prior to discretionary approval by the City of Ontario for development projects subject to CEQA, project applicants shall prepare and submit a technical assessment evaluating potential project construction- and operational-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation must be prepared in conformance with SCAQMD

methodology for assessing air quality impacts and shall identify mitigation measures as part of conditions of approval if air pollutants are determined to have the potential to exceed the SCAQMD thresholds of significance. As such, Project-Specific Condition of Approval AIR-1, would be required to reduce substantial pollutant concentrations during project construction.

Project-Specific Condition of Approval AIR-1 During construction of the proposed project, the project contractor shall ensure all off-road diesel-powered construction equipment of 50 horsepower or more used for the project construction at a minimum meets the California Air Resources Board Tier 2 emissions standards equipped with Level 3 diesel particulate filters or the equivalent.

Table R identifies the results of the analysis with implementation of Project-Specific Condition of Approval AIR-1.

Table R: Health Risks from Project Construction to Off-Site Receptors with AIR-1

Location	Carcinogenic Inhalation Health Risk in One Million	Chronic Inhalation Hazard Index	Acute Inhalation Hazard Index
Worker Receptor Risk	0.16	0.008	0.000
Sensitive Receptor Risk	3.08	0.003	0.000
SCAQMD Significance Threshold	**10.0 in one million**	**1.0**	**1.0**
Significant?	**No**	**No**	**No**

Source: LSA (October 2022).
SCAQMD = South Coast Air Quality Management District

As shown in Table R, the mitigated cancer risk at the sensitive receptor MEI would be 3.08 in one million, which would not exceed the SCAQMD cancer risk of 10 in one million. Therefore, with implementation of Project-Specific Condition of Approval AIR-1, construction of the proposed project would not exceed SCAQMD thresholds and would not expose nearby sensitive receptors to substantial pollutant concentrations. Therefore, the proposed project would not lead to new or more severe impacts to sensitive receptors beyond those identified in The Ontario Plan 2050 FSEIR.

Operational Health Risk Assessment

As required by Policy ER-4.9, to determine the potential health risk to people living and working near the proposed project associated with the exhaust of diesel-powered trucks and equipment, an operational HRA was conducted for the proposed project. The carcinogenic and chronic health risks from the proposed project are shown in Table S. The residential risk incorporates the risk for a resident from birth living in a nearby residence (assuming an increased risk due to the increased breathing rate of a child) and an adult living in a nearby residence for 30 years (considered a conservative period of time for an individual to live in any one residence). The HRA model snapshots and outputs are included in Appendix B.

Table S: Health Risks from Project Operation to Off-Site Receptors

Location	Carcinogenic Inhalation Health Risk in One Million	Chronic Inhalation Hazard Index	Acute Inhalation Hazard Index
Worker Receptor Risk	0.30	0.001	0.000
Sensitive Receptor Risk	1.94	0.001	0.000
SCAQMD Significance Threshold	**10.0 in one million**	**1.0**	**1.0**
Significant?	**No**	**No**	**No**

Source: LSA (October 2022).
SCAQMD = South Coast Air Quality Management District

As shown in Table S, the maximum cancer risk for the sensitive receptor MEI would be 1.94 in one million, less than the threshold of 10 in one million. The worker receptor risk would be lower at 0.30 in one million, which would also be below the threshold of 10 in one million. The total chronic hazard index would be 0.001 for both the sensitive and worker receptor MEI, which is below the threshold of 1.0. In addition, the total acute hazard index would be nominal (0.000), which would also not exceed the threshold of 1.0. As these results show, all health risk levels to nearby residents from operation-related emissions of TACs would be well below the SCAQMD's HRA thresholds. No significant health risk would occur from project operation emissions. Therefore, the proposed project would not lead to new or more severe impacts to sensitive receptors beyond those identified in The Ontario Plan 2050 FSEIR.

Odors

As discussed in The Ontario Plan 2050 FSEIR, land uses typically considered to be associated with odors include compost facilities, landfills, solid-waste transfer stations, fiberglass manufacturing facilities, paint/coating operations (e.g., auto body shops), asphalt batch manufacturing plants, chemical manufacturing, and food manufacturing facilities. The Ontario Plan 2050 FSEIR found that since these types of uses would be limited to areas designated Industrial, impacts would be less than significant. In addition, The Ontario Plan 2050 FSEIR found that construction activities could temporarily generate odors; however, by the time such emissions reached any sensitive receptor sites, they would be diluted to well below any level of air quality concern. As such, impacts were determined to be less than significant.

Similar to The Ontario Plan 2050, during project construction, some odors may be present due to diesel exhaust. However, these odors would be temporary and limited to the construction period. The proposed project would not include any activities or operations that would generate objectionable odors and once operational, the project would not be a source of odors. Therefore, the proposed project would not result in other emissions (such as those leading to odors) affecting a substantial number of people. Therefore, the proposed project would not lead to new or more severe odor impacts beyond those identified in The Ontario Plan 2050 FSEIR.

ENERGY IMPACTS

The following describes the potential impacts regarding energy resources that could result from implementation of the proposed project.

Energy Consumption

The proposed project would increase the demand for energy through day-to-day operations and fuel consumption associated with project construction. This section discusses energy use resulting from implementation of the proposed project and evaluates whether the proposed project would result in the wasteful, inefficient, or unnecessary consumption of energy resources or conflict with any applicable plans for renewable energy and energy efficiency.

Construction Energy Use

The Ontario Plan 2050 FSEIR determined that development projects constructed under The Ontario Plan 2050 would create temporary demands for electricity and would also temporarily increase demands for energy associated with transportation. The Ontario Plan 2050 FSEIR found that most off-road construction equipment, such as those used during demolition and grading, would be gas or diesel powered and that all operation of construction equipment would cease upon completion of project construction. Furthermore, The Ontario Plan 2050 FSEIR determined that construction contractors would be required to minimize nonessential idling of construction equipment during construction in accordance with the California Code of Regulations Title 13, Article 4.8, Chapter 9, Section 2449, which would limit wasteful and unnecessary energy consumption. As such, impacts were found to be less than significant.

Similar to The Ontario Plan 2050, construction would begin the third quarter of 2023 and would be anticipated to last for approximately 15 months, with project operations beginning in the fourth quarter of 2024. The project would require energy for activities such as the manufacture and transportation of building materials, grading activities, and building construction. Construction of the proposed project would require electricity to power construction-related equipment. Construction of the proposed project would not involve the consumption of natural gas. The construction-related equipment would not be powered by natural gas, and no natural gas demand is anticipated during construction.

Transportation energy represents the largest energy use during construction and would occur from the transport and use of construction equipment, delivery vehicles and haul trucks, and construction worker vehicles that would use petroleum fuels (e.g., diesel fuel and/or gasoline). Therefore, the analysis of energy use during construction focuses on fuel consumption. Construction trucks and vendor trucks hauling materials to and from the project site would be anticipated to use diesel fuel, whereas construction workers traveling to and from the project site would be anticipated to use gasoline-powered vehicles. Fuel consumption from transportation uses depends on the type and number of trips, VMT, the fuel efficiency of the vehicles, and the travel mode.

Estimates of fuel consumption (diesel fuel and gasoline) from construction equipment, construction trucks, and construction worker vehicles were based on default construction equipment assumptions and trip estimates from CalEEMod and fuel efficiencies from EMFAC2021. Fuel consumption estimates are presented in Table T. CalEEMod output sheets are included in Appendix A, and detailed energy calculations are included in Appendix C.

Table T: Proposed Project Energy Consumption Estimates during Construction

Energy Type	Total Energy Consumption	Percentage Increase Countywide
Diesel Fuel (total gallons)	77,764.3	0.01
Gasoline (total gallons)	54,612.8	0.02

Source: Compiled by LSA (September 2022)

As indicated in Table T, the project would consume approximately 77,764.3 gallons of diesel fuel and approximately 54,612.8 gallons of gasoline during construction. Based on fuel consumption obtained from EMFAC2021, approximately 321.6 million gallons of diesel and approximately 917.9 million gallons of gasoline will be consumed from vehicle trips in San Bernardino County in 2022. Therefore, construction of the proposed project would increase the annual construction generated fuel use in San Bernardino County by approximately 0.01 percent for diesel fuel usage and by 0.02 percent for gasoline fuel usage. As such, project construction would have a negligible effect on local and regional energy supplies. Furthermore, impacts related to energy use during construction would be temporary and relatively small in comparison to San Bernardino County's overall use of the State's available energy resources. No unusual project characteristics would necessitate the use of construction equipment that would be less energy efficient than at comparable construction sites in the region or the State. In addition, construction activities are not anticipated to result in an inefficient use of energy as gasoline and diesel fuel would be supplied by construction contractors who would conserve the use of their supplies to minimize their costs on the project. The project would not cause or result in the need for additional energy facilities or an additional or expanded delivery system. For these reasons, fuel consumption during construction would not be inefficient, wasteful, or unnecessary. Therefore, the proposed project would not lead to new or substantially more severe significant impacts associated with construction-related energy beyond those identified in The Ontario Plan 2050 FSEIR.

Operational Energy Usage

As discussed in The Ontario Plan 2050 FSEIR, operation of new development projects accommodated under The Ontario Plan 2050 FSEIR would create additional demands for electricity and natural gas compared to existing conditions. Operational use of electricity and natural gas would include heating, cooling, and ventilation of buildings; water heating; operation of electrical systems; use of on-site equipment and appliances; and lighting. The Ontario Plan 2050 FSEIR determined that regulatory compliance (e.g., Building Energy Efficiency Standards, CALGreen, RPS, and CAFE standards) would increase building energy efficiency and vehicle fuel efficiency and reduce building energy demand and transportation-related fuel usage. Additionally, The Ontario Plan 2050 FSEIR found that implementation of policies related to land use and transportation planning and design, energy efficiency, public and active transit, and renewable energy generation would contribute to minimizing building and transportation-related energy demands overall and demands on nonrenewable sources of energy. As such, it was determined that impacts would be less than significant.

Similar to The Ontario Plan 2050, operational energy use associated with the proposed project would be associated with natural gas use, electricity consumption, and fuel used for vehicle trips.

Energy consumption was estimated for the proposed project using default energy intensities by land use type in CalEEMod.

The proposed project would also result in energy usage associated with gasoline and diesel fuel consumed by project-related vehicle and truck trips. Fuel use associated with vehicle and truck trips generated by the proposed project was calculated based on the project's Trip Generation, which identifies that the existing conditions typically generate approximately 15 average daily trips and that the proposed project would generate a total of 554 average daily trips, including 345 passenger vehicle trips, 61 two-axle truck trips, 29 three-axle truck trips, and 119 four-axle truck trips The amount of operational fuel use was estimated using CARB's EMFAC2021 model, which provided projections for typical daily fuel usage in San Bernardino County.

Electricity, natural gas, and fuel usage estimates associated with the proposed project are shown in Table U.

As shown in Table U, the estimated potential net increase in electricity demand associated with the operation of the proposed project is 676,878 kilowatt-hours (kWh) per year. Total electricity demand in San Bernardino County in 2020 was approximately 15,968.5 GWh (15,968,500,000 kWh). Therefore, operation of the proposed project would negligibly increase the annual electricity consumption in San Bernardino County by less than 0.01 percent.

As shown in Table U, the estimated potential net increase in natural gas demand associated with the proposed project is 16,821 therms per year. Total natural gas consumption in San Bernardino County in 2020 was 527 million therms (527,236,428 therms). Therefore, operation of the proposed project would negligibly increase the annual natural gas consumption in San Bernardino County by less than 0.01 percent.

Table U: Energy Consumption Estimates During Project Operation

Energy Type	Annual Energy Consumption
Existing Uses Operational Energy Consumption	
Electricity Consumption (kWh/year)	247,073
Natural Gas Consumption (therms/year)	1,951
Proposed Project Operational Energy Consumption	
Electricity Consumption (kWh/year)	923,951
Natural Gas Consumption (therms/year)	18,772
Net Electricity Consumption	**676,878**
Net Natural Gas Consumption	**16,821**
Existing Uses Automotive Fuel Consumption	
Gasoline (gallons/year)	2,423.5
Diesel Fuel (gallons/year)	321.2
Proposed Project Automotive Fuel Consumption	
Gasoline (gallons/year)	66,832.0
Diesel Fuel (gallons/year)	90,411.7
Net Gasoline Consumption	**64,408.5**
Net Diesel Fuel Consumption	**90,090.5**

Source: Compiled by LSA (September 2022).
kWh = kilowatt-hours

Electrical and natural gas demand associated with project operations would not be considered inefficient, wasteful, or unnecessary in comparison to other similar developments in the region. Furthermore, the proposed project would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency. The project would be required to adhere to all federal, State, and local requirements for energy efficiency, including the Title 24 standards.

Title 24 building energy efficiency standards establish minimum efficiency standards related to various building features, including appliances, water and space heating and cooling equipment, building insulation and roofing, and lighting, which would reduce energy usage.

As shown in Table U, the net increase in fuel use associated with the vehicle trips generated by the proposed project is estimated at 64,408.5 gallons of gasoline and 90,090.5 gallons of diesel fuel per year. This analysis conservatively assumes that all vehicle trips generated as a result of project operation would be new to San Bernardino County. Based on fuel consumption obtained from EMFAC2021, approximately 321.6 million gallons of diesel and approximately 917.9 million gallons of gasoline will be consumed from vehicle trips in San Bernardino County in 2022. Therefore, vehicle and truck trips associated with the proposed project would increase the annual fuel use in San Bernardino County by approximately 0.02 percent for gasoline fuel usage and approximately 0.01 percent for diesel fuel usage. Fuel consumption associated with vehicle trips generated by project operations would not be considered inefficient, wasteful, or unnecessary in comparison to other similar developments in the region. Therefore, the proposed project would not lead to new or substantially more severe significant impacts associated with operational energy beyond those identified in The Ontario Plan 2050 FSEIR.

Conflict with Renewable Energy or Energy Efficiency Plans

The Ontario Plan 2050 FSEIR found that The Ontario Plan 2050 would comply with the RPS, the Building Energy Efficiency Standards, and CALGreen and as such would not conflict with or obstruct implementation of a state or local plan for renewable energy or energy efficiency. Impacts were determined to be less than significant.

In 2002, the Legislature passed SB 1389, which required the CEC to develop an integrated energy plan every two years for electricity, natural gas, and transportation fuels for the Integrated Energy Policy Report. The plan calls for the State to assist in the transformation of the transportation system to improve air quality, reduce congestion, and increase the efficient use of fuel supplies with the least environmental and energy costs. To further this policy, the plan identifies a number of strategies, including assistance to public agencies and fleet operators in implementing incentive programs for ZEVs and their infrastructure needs, and encouragement of urban designs that reduce VMT and accommodate pedestrian and bicycle access.

The CEC's *2021 Integrated Energy Policy Report* and *2022 Integrated Energy Policy Report Update* provide the results of the CEC's assessments of a variety of energy issues facing California. As indicated above, energy usage on the project site during construction would be temporary in nature and would be relatively small in comparison to the overall use in San Bernardino County. In addition, energy usage associated with operation of the proposed project would be relatively small in comparison to the overall use in Los Angeles County, and the State's available energy resources. Therefore, energy impacts at the regional level would be negligible. Because California's energy

conservation planning actions are conducted at a regional level, and because the proposed project's total impact on regional energy supplies would be minor, the proposed project would not conflict with or obstruct California's energy conservation plans as described in the CEC's Integrated Energy Policy Report. The proposed project would also comply with the RPS, the Building Energy Efficiency Standards, and CALGreen. Additionally, as demonstrated above, the proposed project would not result in the inefficient, wasteful, and unnecessary consumption of energy. Potential impacts related to conflict with or obstruction of a State or local plan for renewable energy or energy efficiency would be less than significant, and no mitigation is required. Therefore, the proposed project would not lead to new or substantially more severe significant impacts associated with renewable energy or energy efficiency plans beyond those identified in The Ontario Plan 2050 FSEIR.

GREENHOUSE GAS IMPACTS

This section describes the potential GHG impacts associated with implementation the proposed project.

Generation of Greenhouse Gas Emissions

The Ontario Plan 2050 FSEIR determined that implementation of the CCAP, the City would achieve the EO S-03-05 GHG emissions reduction targets, resulting in an 80 percent decrease in GHG emissions in the City by 2050 from existing conditions, and would make substantial progress toward the State's carbon neutrality goals under EO B-55-18. Therefore, The Ontario Plan 2050 FSEIR determined that The Ontario Plan 2050, which includes the CCAP, would reduce GHG emissions impacts compared to the previous The Ontario Plan. As such, impacts were determined to be less than significant.

This section describes the proposed project's construction- and operational-related GHG emissions and contribution to global climate change. The SCAQMD has not addressed emission thresholds for construction in its *CEQA Air Quality Handbook*; however, the SCAQMD requires quantification and disclosure. Thus, an evaluation of the project's impacts related to the release of GHG emissions for both construction and operational phases of the project is described below.

Short-Term Greenhouse Gas Emissions

Similar to The Ontario Plan 2050, demolition and construction activities associated with the proposed project would produce combustion emissions from various sources. During construction, GHGs would be emitted through the operation of construction equipment and from worker and builder supply vendor vehicles, each of which typically use fossil-based fuels to operate. The combustion of fossil-based fuels creates GHGs such as CO_2, CH_4, and N_2O. Furthermore, CH_4 is emitted during the fueling of heavy equipment. Exhaust emissions from on-site construction activities would vary daily as construction activity levels change.

As indicated above, the SCAQMD does not have an adopted threshold of significance for construction-related GHG emissions. However, lead agencies are required to quantify and disclose GHG emissions that would occur during construction. The SCAQMD then requires the construction

GHG emissions to be amortized over the life of the project, defined by the SCAQMD as 30 years[57], added to the operational emissions, and compared to the applicable interim GHG significance threshold tier.

Using CalEEMod, it is estimated that the project would generate approximately 814.7 MT CO_2e during construction of the project. When annualized over the 30-year life of the project, annual emissions would be 27.0 MT CO_2e. Table V lists the construction GHG emissions (details are provided in the CalEEMod output in Appendix A). Construction emissions would be temporary in nature and would only occur for the duration of the construction period.

Table V: Construction Greenhouse Gas Emissions

Construction Year	Annual Emissions (MT/yr)			
	CO_2	CH_4	N_2O	CO_2e
2023	307.5	0.1	<0.1	312.0
2024	495.7	0.1	<0.1	502.7
Total Construction GHG emissions				**814.7**
Amortized Construction Emissions				**27.2**

Source: Compiled by LSA (October 2022).
CH_4 = methane
CO_2 = carbon dioxide
CO_2e = carbon dioxide equivalent
MT/yr = metric tons per year
N_2O = nitrous oxide

Long-Term Greenhouse Gas Emissions

Similar to The Ontario Plan 2050, the proposed project would generate long-term GHG emissions from mobile sources (e.g., vehicle trips), area sources (e.g., maintenance activities and landscaping), indirect emissions from sources associated with energy consumption, waste sources (land filling and waste disposal), and water sources (water supply and conveyance, treatment, and distribution). Mobile-source GHG emissions would include project-generated vehicle trips to and from the project. Area-source emissions would be associated with activities such as landscaping and maintenance on the project site. Energy source emissions would be generated at off-site utility providers because of increased electricity demand generated by the project. Waste source emissions generated by the proposed project include energy generated by land filling and other methods of disposal related to transporting and managing project-generated waste. In addition, water source emissions associated with the proposed project are generated by water supply and conveyance, water treatment, water distribution, and wastewater treatment.

Following guidance from the SCAQMD, GHG emissions were estimated for the operational year of 2024 using CalEEMod. Table W shows the calculated GHG emissions for the proposed project.

[57] The SCAQMD has identified the average operational lifespan of buildings to be 30 years. Website: http://www.aqmd.gov/docs/default-source/ceqa/handbook/greenhouse-gases-(ghg)-ceqa-significance-thresholds/ghgattachmente.pdf (accessed October 2022).

Table W: Greenhouse Gas Emissions (Metric Tons per Year)

Emissions Source	Operational Emissions				
	CO_2	CH_4	N_2O	CO_2e	Percentage of Total
Existing Operational Emissions					
Area Sources	<0.1	<0.1	0.0	<0.1	<1
Energy Sources	54.2	<0.1	<0.1	54.5	30
Mobile Sources	22.4	<0.1	<0.1	22.8	13
Waste Sources	14.8	0.9	0.0	36.7	20
Water Sources	47.2	0.6	<0.1	66.2	37
Total Existing Emissions				**180.2**	100
Proposed Project Operational Emissions					
Area Sources	<0.1	<0.1	0.0	<0.1	<1
Energy Sources	264.0	<0.1	<0.1	265.4	13
Mobile Sources	1,401.8	0.1	0.2	1,448.6	71
Waste Sources	48.3	2.9	0.0	119.7	6
Water Sources	148.2	1.8	<0.1	206.4	10
Total Project Operational Emissions				**2,040.1**	**100**
Amortized Construction Emissions				27.2	-
Total Annual Emissions				**2,067.3**	**-**
Net Operational Emissions				**1,887.1**	
SCAQMD Threshold				3,000	-
Exceed?				**No**	**-**

Source: Compiled by LSA (October 2022).
CH_4 = methane
CO_2 = carbon dioxide
CO_2e = carbon dioxide equivalent
MT/yr = metric tons per year
N_2O = nitrous oxide
SCAQMD = South Coast Air Quality Management District

As discussed above, a project would have less than significant GHG emissions if it would result in operational-related GHG emissions of less than 3,000 MT CO_2e per year. Based on the analysis results, the proposed project would result in approximately 1,887.1 MT CO_2e per year. Therefore, operation of the proposed project would not generate significant GHG emissions that would have a significant effect on the environment. The proposed project would not lead to new or more severe operational GHG impacts beyond those identified in The Ontario Plan 2050.

Consistency with Greenhouse Gas Emissions Reduction Plans

The Ontario Plan 2050 FSEIR determined that The Ontario Plan 2050 would be consistent with the 2017 Scoping Plan and the 2020–2045 RTP/SCS. Impacts were found to be less than significant.

An evaluation of the proposed project's consistency with the City of Ontario CCAP, the County's Greenhouse Gas Reduction Plan, the 2017 Scoping Plan, and the 2020–2045 RTP/SCS is provided below.

Ontario 2022 Community Climate Action Plan

The City has recently adopted the 2022 CCAP[58]. The 2022 CCAP is Ontario's strategic plan to reduce GHG emissions and foster a sustainable community through 2050 and beyond. The 2022 CCAP is an update to the 2014 CCAP, providing updated analyses and background information, an expanded set of GHG reduction strategies, and a planning horizon out to 2050. The 2022 CCAP provides strategies in various sectors to meet or exceed the State targets of reducing emissions 40 percent below 1990 levels by 2030 and 80 percent below 1990 levels by 2050. The 2022 CCAP which includes GHG emissions CEQA thresholds and screening tables which will be used for future projects to determine their consistency with the CCAP. However, GHG CEQA thresholds and screening tables are not available yet, thus the proposed project was analyzed based on the SCAQMD thresholds and for consistency with the CCAP GHG reduction strategies that are applicable to the proposed project. The proposed project would implement energy and water conservation measures consistent with the CALGreen Code and the 2022 CCAP. In addition, the proposed project would include approximately 62,100 sq ft of ornamental landscape area, consistent with the goal of the CCAP to include new trees in parking lot areas. Future tenants of the buildings would be able to implement mass transit measures such as ridership programs and public transit passes to comply with the goals of the CCAP. Therefore, the proposed project would not lead to new or more severe impacts beyond those identified in The Ontario Plan 2050 FSEIR.

San Bernardino County Regional Greenhouse Gas Reduction Plan

As discussed above, the City of Ontario was a participant in the San Bernardino County Regional Greenhouse Gas Reduction Plan, which identifies the County's vision and goals in reducing GHG emissions in its different cities, local government facilities, and communities. Table X below presents the proposed project's compliance with each reduction measure evaluated for the City of Ontario, as identified in the San Bernardino County Regional Greenhouse Gas Reduction Plan. Therefore, the proposed project would not lead to new or more severe impacts beyond those identified in The Ontario Plan 2050 FSEIR.

2017 Scoping Plan

AB 32 is aimed at reducing GHG emissions to 1990 levels by 2020. AB 32 requires the CARB to prepare a Scoping Plan that outlines the main State strategies for meeting the 2020 deadline and to reduce GHGs that contribute to global climate change. The AB 32 Scoping Plan has a range of GHG reduction actions, which includes direct regulations, alternative compliance mechanisms, monetary and non-monetary incentives, voluntary actions, market-based mechanisms such as a cap-and-trade system, and an AB 32 implementation fee to fund the program.

[58] Ontario, City of. 2022. *Ontario Community Climate Action Plan 2022.* August 16. Website: Ontario-CCAP_Adopted_20220816.pdf (accessed October 2022).

Table X: Project Consistency with City of Ontario GHG Reduction Measures

Measure	Description	Project Consistency
Building Energy		
Energy-1. Building Energy	• **Environmental Resources 3-1:** We require conservation as the first strategy to be employed to meet applicable energy-saving standards. • **Environmental Resources 3-3:** We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar and natural ventilation. • **Environmental Resources 3-4:** We require all new and substantially renovated City buildings in excess of 10,000 square feet achieve a LEED Silver Certification standard, as determined by the U.S. Green Building Council.	***Consistent.*** The proposed project would comply with the CALGreen Code regarding energy conservation and green building standards.
Energy-4. Solar Installation for New Housing	• **Environmental Resources 3-3:** We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar and natural ventilation. • **Environmental Resources 3-6:** We promote the use of renewable energy sources to serve public and private sector development.	***Not Applicable.*** This measure is not applicable as the proposed project would not construct a residential building.
Energy-5. Renewable Energy - New Commercial/Industrial	• **Environmental Resources 3-3:** We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar and natural ventilation. • **Environmental Resources 3-6:** We promote the use of renewable energy sources to serve public and private sector development.	***Consistent.*** The proposed project would comply with the CALGreen Code regarding energy conservation and green building standards.
Energy-6. Solar Energy for Warehouse Space	• **Environmental Resources 3-6**: We promote the use of renewable energy sources to serve public and private sector development.	***Consistent.*** The proposed project would comply with the CALGreen Code regarding energy conservation and green building standards.
Energy-7. Solar Installation - Existing Housing	• **Environmental Resources 3-6:** We promote the use of renewable energy sources to serve public and private sector development.	***Not Applicable.*** This measure is not applicable as the proposed project would not retrofit an existing residential building.
Energy-8. Renewable Energy - Existing Commercial/Industrial	• **Environmental Resources 3-6:** We promote the use of renewable energy sources to serve public and private sector development.	***Not Applicable.*** This measure is not applicable as the proposed project would not retrofit an existing building.
Energy-10. Urban Tree Planting for Shading and Energy Savings	• **Environmental Resources 4-8:** We protect healthy trees within the City and plant new trees to increase carbon sequestration and help the regional/local air quality.	***Consistent.*** The proposed project would include landscaping.

Measure	Description	Project Consistency
OnRoad		
OnRoad	• **Mobility 3-3:** We require walkways that promote safe and convenient travel between residential areas, businesses, schools, parks, recreation areas, and other key destination points. • **Environmental Resources 3-2:** We require the use of best practices identified in green community rating systems to guide the planning and development of all new communities. • **Environmental Resources 4-1:** We reduce GHG and other local pollutant emissions through compact, mixed use, and transit-oriented development and development that improves the regional jobs-housing balance.	***Not Applicable.*** The proposed project would include two speculative warehouse buildings. Future tenants of the buildings would implement mass transit encouragement measures as applicable.
OnRoad-2. Encourage Use of Mass Transit	• **Mobility 3-4:** We work with regional transit agencies to implement BRT service to target destinations and along corridors, as shown in the Transit Plan. • **Mobility 3-1:** We maintain a proactive working partnership with transit providers to ensure that adequate public transit service is available. • **Mobility 3-2:** We require new development to provide transit facilities, such as bus shelters, transit bays and turnouts, as necessary. • **Mobility 3-5**: We support extension of the Metro Rail Gold Line to Ontario. • **Mobility 3-6:** We advocate expansion of Metrolink service to include the Downtown and the multimodal transit center. • **Mobility 3-8:** We work with regional transit agencies to secure convenient feeder service from the Metrolink station and the proposed multimodal transit center to employment centers in Ontario. • **Mobility 3-11**: We require the future development of community-wide serving facilities to be sited in transit-ready areas that can be served and made accessible by public transit. • **Land Use 1-2**: We integrate state, regional and local Sustainable Community/Smart Growth principles into the development and entitlement process.	***Not Applicable.*** The proposed project would construct two warehouse buildings and would not include transit fleet vehicles.
OnRoad-3. Transportation Demand Management and Signal Synchronization	• **Policy LU-3.3**: Locate regionally serving land uses with immediate access to the regional transportation network that is designed to provide maximum access capabilities and permit maximum dispersal of traffic.	***Not Applicable.*** The proposed project would generate a total of 554 average daily trips, including 63 AM peak hour trips and 65 PM peak hour trips. Based on the minimal peak hour trips generated by the proposed project, the project would not be required to implement transportation

Table X: Project Consistency with City of Ontario GHG Reduction Measures

Measure	Description	Project Consistency
		demand management strategies or signal synchronization.
OnRoad-4. Expand Bike Routes	• **Land Use 1-4:** We require development and urban design, where appropriate, that reduces reliance on the automobile and capitalizes on multi-modal transportation opportunities. • **Mobility 3-1:** We maintain our Multipurpose Trails & Bikeway Corridor Plan to create a comprehensive system of on- and off-street bikeways that connect residential areas, businesses, schools, parks, and other key destination points. • **Mobility 3-2:** We provide off-street multipurpose trails and Class II bikeways as our primary paths of travel and use the Class III for connectivity in constrained circumstances. • **Mobility 3-4:** We explore opportunities to expand the pedestrian and bicycle networks.	***Not Applicable.*** The proposed project would include two speculative warehouse buildings. Future tenants of the buildings would implement mass transit encouragement measures as applicable.
Solid Waste Management		
Waste-2. Waste Diversion	• **Environmental Resources 3-1:** We shall meet or exceed AB 939 requirements.	***Consistent.*** The proposed project would be consistent with County Solid Waste and State requirements for waste reduction.
Water Conveyance		
Water Conveyance-1.	• **Environmental Resources 1-3**: We require conservation strategies that reduce water usage.	***Consistent.*** The proposed project would comply with the CALGreen Code regarding water conservation and green building standards.

Source: Compiled by LSA (October 2022).
CALGreen Code = California Green Building Standards Code
LEED = Leadership in Energy and Environmental Design

EO B-30-15 added the immediate target of reducing GHG emissions to 40 percent below 1990 levels by 2030. CARB released a second update to the Scoping Plan, the 2017 Scoping Plan, to reflect the 2030 target set by EO B-30-15 and codified by SB 32. SB 32 affirms the importance of addressing climate change by codifying into statute the GHG emissions reductions target of at least 40 percent below 1990 levels by 2030 contained in EO B-30-15. SB 32 builds on AB 32 and keeps the State on the path toward achieving the 2050 objective of reducing emissions to 80 percent below 1990 levels. The companion bill to SB 32, AB 197, provides additional direction to the CARB related to the adoption of strategies to reduce GHG emissions. Additional direction in AB 197 intended to provide easier public access to air emissions data that are collected by CARB was posted in December 2016.

As identified above, the AB 32 Scoping Plan contains GHG reduction measures that work towards reducing GHG emissions, consistent with the targets set by AB 32 and EO B-30-15 and codified by SB 32 and AB 197. The measures applicable to the proposed project include energy efficiency

measures, water conservation and efficiency measures, and transportation and motor vehicle measures, as discussed below.

Energy efficient measures are intended to maximize energy efficiency building and appliance standards, pursue additional efficiency efforts including new technologies and new policy and implementation mechanisms, and pursue comparable investment in energy efficiency from all retail providers of electricity in California. In addition, these measures are designed to expand the use of green building practices to reduce the carbon footprint of California's new and existing inventory of buildings. The proposed project would be required to comply with the latest Title 24 standards of the CCR, established by the CEC, regarding energy conservation and green building standards. Therefore, the proposed project would comply with applicable energy measures.

Water conservation and efficiency measures are intended to continue efficiency programs and use cleaner energy sources to move and treat water. Increasing the efficiency of water transport and reducing water use would reduce GHG emissions. As noted above, the proposed project would be required to comply with the latest Title 24 standards of the CCR, which includes a variety of different measures, including reduction of wastewater and water use. Therefore, the proposed project would not conflict with any of the water conservation and efficiency measures.

The goal of transportation and motor vehicle measures is to develop regional GHG emissions reduction targets for passenger vehicles. The second phase of Pavley standards will reduce GHG emissions from new cars by 34 percent from 2016 levels by 2025, resulting in a 3 percent decrease in average vehicle emissions for all vehicles by 2020. Vehicles traveling to the project site would comply with the Pavley II (LEV III) Advanced Clean Cars Program. Therefore, the proposed project would not conflict with the identified transportation and motor vehicle measures.

As such, the proposed project would comply with existing State regulations adopted to achieve the overall GHG emissions reduction goals identified in AB 32 and would be consistent with applicable plans and programs designed to reduce GHG emissions. Therefore, the proposed project would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs. Therefore, the proposed project would not lead to new or more severe impacts beyond those identified in The Ontario Plan 2050 FSEIR.

2020-2045 RTP/SCS

SCAG's RTP/SCS identifies that land use strategies that focus on new housing and job growth in areas served by high quality transit and other opportunity areas would be consistent with a land use development pattern that supports and complements the proposed transportation network. The core vision in the 2020–2045 RTP/SCS is to better manage the existing transportation system through design management strategies, integrate land use decisions and technological advancements, create complete streets that are safe to all roadway users, preserve the transportation system, and expand transit and foster development in transit oriented communities. The 2020–2045 RTP/SCS contains transportation projects to help more efficiently distribute population, housing, and employment growth, as well as forecast development that is generally consistent with regional-level general plan data. The forecasted development pattern, when integrated with the financially constrained transportation investments identified in the 2020–2045 RTP/SCS, would reach the regional target of reducing GHG emissions from autos and light-duty

trucks by 19 percent by 2035 (compared to 2005 levels). The 2020–2045 RTP/SCS does not require that local general plans, specific plans, or zoning be consistent with the 2020–2045 RTP/SCS, but provides incentives for consistency for governments and developers.

Implementing SCAG's RTP/SCS will greatly reduce the regional GHG emissions from transportation, helping to achieve statewide emissions reduction targets. As stated above, the proposed project would result in fewer daily trips than under existing conditions and would in no way conflict with the stated goals of the RTP/SCS; therefore, the proposed project would not interfere with SCAG's ability to achieve the region's GHG reduction target of 19 percent below 2005 per capita emissions levels by 2035. Furthermore, the proposed project is not regionally significant per *State CEQA Guidelines* Section 15206 and as such, it would not conflict with the SCAG RTP/SCS targets since those targets were established and are applicable on a regional level.

Based on the nature of the proposed project, it is anticipated that implementation of the proposed project would not interfere with SCAG's ability to implement the regional strategies outlined in the RTP/SCS. Therefore, the proposed project would not lead to new or more severe impacts beyond those identified in The Ontario Plan 2050 FSEIR.

CONCLUSIONS

Based on the analysis presented above, the proposed project would not conflict with or obstruct implementation of SCAQMD air quality plans. In addition, construction and operation of the proposed project would not result in the generation of criteria air pollutants that would exceed SCAQMD thresholds of significance. Furthermore, the proposed project would be required to implement The Ontario Plan 2050 Mitigation Measures 3-1, 3-2, and AQ-1, which would further reduce construction and operational emissions. With implementation of Project-Specific Condition of Approval AIR-1, the proposed project is not expected to produce significant emissions that would affect nearby sensitive receptors. In addition, the proposed project would not result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation and would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency. The project would also not result in objectionable odors affecting a substantial number of people. With regard to GHGs, the project would not result in substantial emissions during construction or operation. Additionally, the proposed project would not conflict with the objectives embodied in AB 32, EO B-30-15, SB 32, or AB 197. Therefore, the proposed project's incremental contribution to cumulative GHG emissions would not be cumulatively considerable. Therefore, the proposed project would not lead to new or substantially more severe significant air quality, energy, or GHG impacts beyond those identified in The Ontario Plan 2050 FSEIR.

City Park	1.43	Acre	1.43	62,290.80	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	32
Climate Zone	10			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - total prject site is 10.05 acres

Construction Phase - Construction would start in Q3 of 2023 and would last 15 months. Overlap of building construction and architectural coating phases.

Off-road Equipment - default equipment

Grading - Balanced site

Demolition - Demolition of 6 on site buildings totaling 77,696 sf

Vehicle Trips - Based on a trip generation of 224 ADT for general light industry and 329 ADT for unrefrigetared warehouse

Fleet Mix - Based on 224 ADT, 13 medium trucks, and 39 heavy trucks for general light industry and 329 ADT, 16 medium trucks, and 80 heavy truck for unrefrigerated warehouse

627 Bon View Warehouse Project - San Bernardino-South Coast County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Energy Use -

Construction Off-road Equipment Mitigation - Use of Tier 2 construction equipment, water exposed area twice, and reduced vehicle speed to 15 mph

Area Mitigation - No hearth

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Unrefrigerated Warehouse-No Rail	192.37	1000sqft	5.50	192,370.00	0
General Light Industry	46.09	1000sqft	1.75	46,090.00	0
Parking Lot	146.00	Space	1.37	58,400.00	0
City Park	1.43	Acre	1.43	62,290.80	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	32
Climate Zone	10			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - total prject site is 10.05 acres

Construction Phase - Construction would start in Q3 of 2023 and would last 15 months. Overlap of building construction and architectural coating phases.

Off-road Equipment - default equipment

Grading - Balanced site

Demolition - Demolition of 6 on site buildings totaling 77,696 sf

Vehicle Trips - Based on a trip generation of 224 ADT for general light industry and 329 ADT for unrefrigetared warehouse

Fleet Mix - Based on 224 ADT, 13 medium trucks, and 39 heavy trucks for general light industry and 329 ADT, 16 medium trucks, and 80 heavy truck for unrefrigerated warehouse

627 Bon View Warehouse Project - San Bernardino-South Coast County, Summer

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Energy Use -

Construction Off-road Equipment Mitigation - Use of Tier 2 construction equipment, water exposed area twice, and reduced vehicle speed to 15 mph

Area Mitigation - No hearth

City Park	1.43	Acre	1.43	62,290.80	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	32
Climate Zone	10			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - total prject site is 10.05 acres

Construction Phase - Construction would start in Q3 of 2023 and would last 15 months. Overlap of building construction and architectural coating phases.

Off-road Equipment - default equipment

Grading - Balanced site

Demolition - Demolition of 6 on site buildings totaling 77,696 sf

Vehicle Trips - Based on a trip generation of 224 ADT for general light industry and 329 ADT for unrefrigetared warehouse

Fleet Mix - Based on 224 ADT, 13 medium trucks, and 39 heavy trucks for general light industry and 329 ADT, 16 medium trucks, and 80 heavy truck for unrefrigerated warehouse

627 Bon View Warehouse Project - San Bernardino-South Coast County, Winter

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Energy Use -

Construction Off-road Equipment Mitigation - Use of Tier 2 construction equipment, water exposed area twice, and reduced vehicle speed to 15 mph

Area Mitigation - No hearth

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	32
Climate Zone	10			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - total prject site is 10.05 acres

Construction Phase - Construction would start in Q3 of 2023 and would last 15 months. Overlap of building construction and architectural coating phases.

Off-road Equipment - default equipment

Grading - Balanced site

Demolition - Demolition of 6 on site buildings totaling 77,696 sf

Vehicle Trips - Based on a trip generation of 224 ADT for general light industry and 329 ADT for unrefrigetared warehouse

Fleet Mix - Based on 224 ADT, 13 medium trucks, and 39 heavy trucks for general light industry and 329 ADT, 16 medium trucks, and 80 heavy truck for unrefrigerated warehouse

627 Bon View Warehouse Project - Mitigation - San Bernardino-South Coast County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Energy Use -

Construction Off-road Equipment Mitigation - Use of Tier 2 levl 3 DPF construction equipment, water exposed area twice, and reduced vehicle speed to 15 mph

Area Mitigation - No hearth

3.1 Mitigation Measures Construction

Use Cleaner Engines for Construction Equipment

Use DPF for Construction Equipment

Water Exposed Area

Reduce Vehicle Speed on Unpaved Roads

627 Bon View Warehouse Project - Mitigation - San Bernardino-South Coast County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

3.2 Demolition - 2023
