

## **Natural Resources**

### **Supplies Needed:**

Plants

Pots

Dirt

Different spots to place them

### **To Begin:**

1. Plant four similar plants in four similar pots.
2. Place the newly potted plants in four different areas.
3. Water them and observe them daily.
4. Do they each have enough resources to survive?
5. Observe the plants and record information and predictions daily in your journal.
6. Brainstorm any “I wonder...” questions that this experience evoked in the students and add them to a chart. This chart can offer some great continuations or extensions for future lessons.
