Master Facilities Plan

for the
2021-2022 Fiscal Year
Development Impact Fee Report

CITY OF ONTARIO- MASTER FACILITIES PLAN

Project #		Page #
Master Facilities Plan Project Cost Summary		1-11
Law Enforcement Facilities, Vehicles and Equipment Capital Project Summary		12-13
LE-001	Police Station Purchase and Roof Improvements Prior to Occupancy	14
LE-002	Complete Remaining Interior Improvements @ 55% of Building Space	15
LE-003	Additional Patrol/Detective/Specialty/Staff Vehicles	16
LE-004	Additional Officer Assigned Equipment	17
LE-005	Additional Specialty Equipment	18
LE-006	Building Appurtenances Equipment	19
LE-007	Communications Equipment	20
LE-008	Advanced Technology Hardware and Software	21
LE-009	Additional Helicopter Capacity	22
LE-010	Share of Specific/Common City Yard Improvements	23
Fire Suppression Facilities, Vehicles and Equipment Capital Project Summary		24-26
FS-001	Project Completed or No Longer Needed	27
FS-002	Project Completed or No Longer Needed	28
FS-003	Fire Station #11 Land Acquisition And Construction	29
FS-003A	Fire Station #11 Vehicle Storage Bay	38
FS-004	Fire Station #11 Response Engine and Aerial	31
FS-005	Fire Station #12 Land Acquisition And Construction	32
FS-005A	Fire Station #12 Vehicle Storage Bay	38
FS-006	Fire Station #12 Response Engines	33
FS-007	Fire Station #13 Land Acquisition And Construction	34
FS-007A	Fire Station #13 Vehicle Storage Bay	38
FS-008	Fire Station #13 Response Engine	35
FS-009	Fire Station #14 Land Acquisition And Construction	36
FS-009A	Fire Station #14 Vehicle Storage Bay	38
FS-010	Fire Station #14 Response Engine	36
FS-011	Reserve Response Engines	37
FS-012	FS-003A, FS-005A, FS-007A and FS009A - Shared Vehicle Storage Bays	38
FS-013	Battalion Chief Response Vehicle	39
FS-014	Fire Fighter Assigned Equipment	40
FS-015	Fire Administration Headquarters Relocation	41
FS-016	Emergency Training Center Expansion	42
FS-017	City Emergency Operations Center	43
FS-018	Special Operations Support Vehicle	44
FS-019	Mobile Air And Lighting Support Vehicle	45
FS-020	Emergency Services Communication System	46
FS-021	Share of Specific/Common City Yard Improvements	47
FS-022	Project Completed or No Longer Needed	48
FS-023	Fire Station Operations #1 Relocation	49
FS-024	Expand Station #3 (East Francis)	50

FS-025	Project Completed or No Longer Needed	51
Circulation (Streets, Signals and Bridges) System Capital Project Summary		52-58
ST-001	Archibald Avenue From Riverside to Edison (P)	59
ST-002	Archibald Avenue From Edison To South City Limit (P)	60
ST-003	Bellegrave Avenue From Archibald To Milliken (P)	61
ST-004	Campus Avenue From Riverside To Merrill	62
ST-005	Chino Avenue From Euclid To Milliken	63
ST-006	Mill Creek Avenue From Riverside To Bellegrave (P)	64
ST-007	Edison Avenue From Euclid To Walker	65
ST-008	Edison Avenue From Walker To Vineyard	66
ST-009	Edison Avenue From Vineyard To Mill Creek	67
ST-010	Edison Avenue From Mill Creek to Milliken (P)	68
ST-011	Eucalyptus Avenue From Euclid To Milliken	69
ST-012	Euclid Avenue From Riverside To Merrill	70
ST-013	Grove Avenue From Riverside To Merrill	71
ST-014	Haven Avenue From Riverside To Bellegrave (P)	72
ST-015	Merrill Avenue From Euclid To Archibald	73
ST-016	Milliken Avenue From Riverside To Edison	74
ST-017	Milliken Avenue From Edison To Bellegrave	75
ST-018	Hellman Avenue From Riverside To Merrill	76
ST-019	Riverside Drive From Euclid To Milliken (P)	77
ST-020	Schaefer Avenue From Euclid To Haven	78
ST-021	Turner Avenue From Riverside To Schaefer	79
ST-022	Vineyard Avenue From Riverside To Merrill	80
ST-023	Walker Avenue From Riverside To Merrill	81
ST-024	Ontario Ranch Traffic Control System (P)	82
ST-025	Non-Dev. ROW, Frontage Imps. & SCE Pole Relocations	83
ST-026	Additional SCE Pole Relocations	84
ST-027	Project Completed or No Longer Needed	85
ST-028	Project Completed or No Longer Needed	86
ST-029	OR Offsite Cantu Galleano Widening I-15 To Milliken	87
ST-030	OR Offsite Euclid Avenue Improvements, Merrill To US-71	88
ST-031	OR Offsite Archibald Avenue Bridge Over Santa Ana River	89
ST-032	OR Offsite Hamner Avenue Bridge Over The Santa Ana River	90
ST-033	General City Street Lights (P)	91
ST-034	General City Traffic Signals	92
ST-035	Benson Avenue From Mission To Philadelphia	93
ST-036	Mountain Avenue From Sixth To Holt (P)	94
ST-037	San Antonio Avenue From Park To Phillips	95
ST-038	Bon View Avenue From Holt to Mission	96

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Law Enforcement Facilities, Vehicles And Equipment
Project Title / Ref#: Police Station Purchase/Roof Improvements Prior To Occupancy
Submitting Departments: Police Department

LE -001

Project Description:

The existing Police Station is the result of the purchase of a 175,000 square foot vacated commercial building. The facility was purchased and the roof was replaced prior to any interior improvements (see (LE-002). It was anticipated that the station would be final station for the City at General Plan build-out.

Justification / Consequences of Avoidance:

The City General Plan indicates the potential addition of 80,179 additional residences, 546 commercial lodging units and 103,169,117 square feet of business square feet are added to the City. This will result in a doubling of the population and a significant increase in the number of square feet of high demand business uses. As the residential and business community continues to expand (through development), the Police Department will receive a statistically based number of additional calls-for-service, As these additional calls-for-service are realized the Department will need to increase the number of sworn officers in order to accommodate these additional calls-for-service. However, if the number of sworn officers remains static, the existing level of service (LOS), by definition, will decrease. The additional officers will require 350 of space per sworn officer to maintain the City's space per officer standard.

Relationship to General Plan Development:

Roughly 45% of the facilities square feet are necessary to meet the needs of the existing staff of the existing 225 sworn officers. The remaining 55% represents space for 272 additional officers (of 497 total required officers) the demands from future development.

Allocation To General Plan Buildout: 54.72%

Reference Document:

None, all police projects are based upon development-generated additional demand.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

PROPOSED EXPENDITURES	FY 2022-23	FY 2023-24	FY 2024-25	FY 2025-26	G.P. Build-Out	Total all Years

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Law Enforcement Facilities, Vehicles And Equipment
Project Title / Ref#: Complete Remaining Interior Improvements @ 55% Of Bldg Space
Submitting Departments: Police Department

LE -002

Project Description:

The existing Police facility can meet the needs of 497 sworn officers at an adequate and sufficient standard of 350 square feet per officer. Future demand at General Plan build-out indicates the need for 272 sworn officers (to maintain the existing level of service), to join the existing 225 sworn officers for a General Plan build-out of or 497 total officers.

Justification / Consequences of Avoidance:

As the residential and business community continues to expand (through development), the Police Department will receive a statistically based number of additional calls-for-service. As these additional calls-for-service are realized the Department will need to increase the number of sworn officers in order to accommodate these additional calls-for-service. However, if the number of sworn officers remains static, the existing level of service (LOS), by definition, will decrease. The additional officers will require 350 square feet of space per sworn officer to maintain the existing standard.

Relationship to General Plan Development:

All Police Department projects are based upon the incremental needs (based upon existing LOS standards) created by new development and thus are 100% related to General Plan development and are based upon the proportional increase in demand as evidenced by calls-for-service data.

Allocation To General Plan Buildout: 100.00%

Reference Document:

None, all police projects are based upon development-generated additional demand.

Project Timing:

As development occurs and creates the additional demand and DIF receipts are collected.

PROPOSED EXPENDITURES	FY 2022-23	FY 2023-24	FY 2024-25	FY 2025-26	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	\$0	\$0	\$0	\$0	\$3,868,246	\$3,868,246

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Law Enforcement Facilities, Vehicles And Equipment

Project Title / Ref#: Additional Patrol/Detective/Specialty/Staff Vehicles

LE -003

Submitting Departments: Police Department

Project Description:

The project consists of acquiring 284 additional law enforcement response vehicles including patrol, unmarked and specialty vehicles at an average of \$69,850 per vehicle. The addition of 272 officers will require the acquisition of roughly 284 assorted law enforcement vehicles at an average of \$69,850. This will maintain the existing standard of 1.04 vehicles (235) per sworn officer (225). The vehicles would consist of a variety of staff, patrol, specialty and under-cover vehicles.

Justification / Consequences of Avoidance:

As the residential and business community continues to expand (through development), the Police Department will receive a statistically based number of additional calls-for-service. As these additional calls-for-service are realized the Department will need to increase the number of sworn officers in order to accommodate these additional calls-for-service. However, if the number of sworn officers remains static, the existing level of service (LOS), by definition, will decrease. The city has 235 vehicles for 225 officers for a standard of 1.04 vehicles per officer. The additional 272 officers will need 272 additional vehicles to maintain the existing 1.04 vehicle per sworn officer standard.

Relationship to General Plan Development:

All Police Department projects are based upon the needs created by new development and thus are 100% related to General Plan development and are based upon the proportional increase in demand as evidenced by calls-for-service data.

Allocation To General Plan Buildout: 100.00%

Reference Document:

None, all police projects are based upon development-generated additional demand.

Project Timing:

As development occurs and creates the additional demand and DIF receipts are collected.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Law Enforcement Facilities, Vehicles And Equipment

Project Title / Ref#: Additional Officer Assigned Equipment

LE -004

Submitting Departments: Police Department

Project Description:

Acquire additional equipment assigned to officers necessary to function in the field. The list includes (but is not limited to): protective vest, handgun, baton, and a compliment of leathers, handcuffs, uniforms, helmet, raincoat and a heavy duty flashlight. The costs include a nominal amount for a back-ground check, medical physical check, polygraph and psychological exam for the successful candidates. The costs are based upon the \$18,246 per officer for the 272 additional officers required.

Justification / Consequences of Avoidance:

As the residential and business community continues to expand (through development), the Police Department will receive a statistically based number of additional calls-for-service. As these additional calls-for-service are realized the Department will need to increase the number of sworn officers in order to accommodate these additional calls-for-service. However, if the number of sworn officers remains static, the existing level of service (LOS), by definition, will decrease.

Relationship to General Plan Development:

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Law Enforcement Facilities, Vehicles And Equipment

Project Title / Ref#: Additional Helicopter Capacity

LE -009

Submitting Departments: Police Department

Project Description:

The addition of over 80,149 additional residences, 546 commercial lodging units and 104,169,177 square feet of business square feet will generate the demand for an additional helicopter. The capacity of the existing helicopter hours will be overwhelmed with a more than doubling 121% increase) of Police calls-for-service.

Justification / Consequences of Avoidance:

As the residential and business community continues to expand (through development), the Police Department will receive a statistically based number of additional calls-for-service. As these additional calls-for-service are realized the Department will need to increase the number of sworn officers in order to accommodate these additional calls-for-service. However, if the number of sworn officers remains static, the existing level of service (LOS), by definition, will decrease.

Relationship to General Plan Development:

All Police Department projects are based upon the needs created by new development and thus are 100% related to General Plan development and are based upon the proportional increase in demand as evidenced by calls-for-service data.

Allocation To General Plan Buildout: 100.00%

Reference Document:

None, all police projects are based upon development-generated additional demand.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

PROPOSED EXPENDITURES	FY 2022-23	FY 2023-24	FY 2024-25	FY 2025-26	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Law Enforcement Facilities, Vehicles And Equipment

Project Title / Ref#: Share Of Common City Yard Improvements

LE -010

Submitting Departments: Police Department

Project Description:

Construct the following improvements: 1) Reconfigure some 60,000 square feet of a recently acquired warehouse and office space. 2) Pavé approximately ten acres of currently dirt parking lot, primarily for the refuse operation refueling area. 3) Construct additional fleet maintenance operations bays. 4) Construct a new welding shop. 5) Increase security through additional fencing and lighting. 6) Construct additional CNG fueling stations and 7) reconfigure a recently acquired 24,000 square foot building into covered parking to maximize fleet lifetime. The combined improvements have a total projected cost of \$38.2 million and are spread between all City operations that make use of the City yard.

Justification / Consequences of Avoidance:

This amount represents the proportional amount of a total estimated \$38.2 million in structural improvements to the City maintenance yard necessary to meet the increasing demands for additional law enforcement vehicles maintenance capacity. The City has acquired adequate land and has existing structural capacity for the various maintenance yard demands. This demand for additional structural capacity results from the doubling of all public infrastructures from the Ontario Ranch area as well as the remaining portions of the General City area.

Relationship to General Plan Development:

All Police Department projects are based upon the needs created by new development and thus are 100% related to General Plan development and are based upon the proportional increase in demand as evidenced by calls-for-service data.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Based upon an analysis of demands on City yard capacity and expansion needs.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: Project Completed Or No Longer Needed

FS -001

Submitting Departments: Fire Department

Project Description:

Fire Station #9 land acquisition and construction project has been completed.

Justification / Consequences of Avoidance:

As the residential and business community development in occurs in the Ontario Ranch area the Fire Department will receive a statistically based number of additional calls-for-service. A minimum of five stations will be required to accommodate these statistically-based calls-for-service that will be generated by the development of the Ontario Ranch area.

Relationship to General Plan Development:

The five proposed stations are necessary to provide first-in capabilities to the Ontario Ranch area. These stations may on occasion support calls-for-service in other areas of the City, but will also receive support from other stations in return. As such the related costs are fully allocated to that planning area.

Allocation To General Plan Buildout: 0.00%

Reference Document:

The project is no longer needed, but has been included to act as a project number placeholder.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: Fire Station #11 Land Acquisition And Construction

FS -003

Submitting Departments: Fire Department

Project Description:

Construct an 11,200 square foot, three-bay wide by two vehicle deep fire station in the Ontario Ranch area. The station would consist of three 1,400 square foot bays, each capable of housing two medium sized vehicles or one long aerial vehicle. The station would have 350 square feet of entry/office space for public access, 1,625 square feet of mechanical and workroom space, 4,345 square feet of living space for up to eight fire-fighters, (double that if emergency measures were needed) and 680 square feet of training room. This station serves the basic model for all future stations to be built in the City. The three bays wide feature will allow for the shifting of resources throughout the day as needed to maximize service capability without incurring on-going greater staffing costs. A fourth bay is included in FS-012 for City-wide reserves vehicle storage. See FS-012, Ontario Ranch Vehicle Storage Bays, Stations 11, 12, 13, 14.

Justification / Consequences of Avoidance:

As the residential and business community development in occurs in the Ontario Ranch area the Fire Department will receive a statistically based number of additional calls-for-service. A minimum of five stations will be required to accommodate these statistically-based calls-for-service that will be generated by the development of the Ontario Ranch area.

Relationship to General Plan Development:

The four remaining OR proposed stations are necessary to provide first-in capabilities to the Ontario Ranch area. These stations may on occasion support calls-for-service in other areas of the City, but will also receive support from other stations in return. As such the related costs are fully allocated to that planning area.

Allocation To General Plan Buildout: 86.88%

Reference Document:

None, projections are based upon a staff application of General Plan based response times.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: Fire Station #14 Land Acquisition And Construction

FS -009

Submitting Departments: Fire Department

Project Description:

Construct an 11,200 square foot, three-bay wide by two vehicle deep fire station in the Ontario Ranch area. The station would consist of three 1,400 square foot bays, each capable of housing two medium sized vehicles or one long aerial vehicle. The station would have 350 square feet of entry/office space for public access, 1,625 square feet of mechanical and workroom space, 4,345 square feet of living space for up to eight fire-fighters, (double that if emergency measures were needed) and 680 square feet of training room. This station serves the basic model for all future stations to be built in the City. The three bays wide feature will allow for the shifting of resources throughout the day as needed to maximize service capability without incurring on-going greater staffing costs. A fourth bay is included in FS-012 for City-wide reserves vehicle storage. See FS-012, Ontario Ranch Vehicle Storage Bays, Stations 11, 12, 13, 14.

Justification / Consequences of Avoidance:

As the residential and business community development in occurs in the Ontario Ranch area the Fire Department will receive a statistically based number of additional calls-for-service, A minimum of five stations will be required to accommodate these statistically-based calls-for-service that will be generated by the development of Ontario Ranch area.

Relationship to General Plan Development:

The four remaining OR proposed stations are necessary to provide first-in capabilities to the Ontario Ranch area. These stations may on occasion support calls-for-service in other areas of the City, but will also receive support from other stations in return. As such the related costs are fully allocated to that planning area.

Allocation To General Plan Buildout: 86.88%

Reference Document:

None, projections are based upon a staff application of General Plan based response times.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.

PROPOSED EXPENDITURES	FY 2022-23	FY 2023-24	FY 2024-25	FY 2025-26	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: Fire Station #14 Response Engine

FS -010

Submitting Departments: Fire Department

Project Description:

The station would require a standard, fully equipped, front-line response engine.

Justification / Consequences of Avoidance:

Each station requires a front-line engine for normal responses. Additional vehicles, beyond the five engines for the five stations will be assigned to the various stations as needed.

Relationship to General Plan Development:

The four remaining proposed OR stations are necessary to provide first-in capabilities to the Ontario Ranch area. These stations may on occasion support calls-for-service in other areas of the City, but will also receive support from other stations in return. As such the related costs are fully allocated to that planning area. Each station requires a front-line engine for normal responses.

Allocation To General Plan Buildout: 86.88%

Reference Document:

None, projections are based upon a staff application of General Plan based response times.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: Reserve Response Engines

FS -011

Submitting Departments: Fire Department

Project Description:

Acquire two additional response engines in order to maintain the Department's one-to-three ratio of reserve engines to front-line engines.

Justification / Consequences of Avoidance:

The Department maintains a ratio of one reserve vehicle for every three front-line engines. The back-up is required for downtime for routine and extraordinary maintenance.

Relationship to General Plan Development:

The four proposed remaining OR stations are necessary to provide first-in capabilities to the Ontario Ranch area. These stations may on occasion support calls-for-service in other areas of the City, but will also receive support from other stations in return. As such the related costs are fully allocated to that planning area.

Allocation To General Plan Buildout: 86.88%

Reference Document:

None, projections are based upon a staff application of General Plan based response times.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment
Project Title / Ref#: Ontario Ranch Vehicle Storage Bays - Stations 11, 12, 13, 14
Submitting Departments: Fire Department

FS -012

Project Description:

Construct an additional 1,400 square foot bays at each of stations, 11, 12, 13, and 14 for storage of city-wide fire response vehicles. These have been set up as a separate project because these bays demonstrate city-wide benefit and need to be financed by all new development within the City as well as the existing community.

Justification / Consequences of Avoidance:

The City can expect the construction of 80,149 dwelling units, 546 commercial lodging units and over 100 million square feet of business uses and this development will generate a larger number of reserve vehicles. The lifetime of these vehicles will be increased significantly if these vehicles are housed.

Relationship to General Plan Development:

These bays will be utilized to house existing and future City-wide reserve response vehicles and the costs have distributed as such.

Allocation To General Plan Buildout: 56.04%

Reference Document:

None, projections are based upon a staff application of General Plan based response times.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: Battalion Chief Response Vehicle

FS -013

Submitting Departments: Fire Department

Project Description:

Acquire a Battalion Chief response vehicle.

Justification / Consequences of Avoidance:

The additional calls-for-service that will be generated by new development within Ontario Ranch will generate the need for a third Battalion Chief and thus a vehicle.

Relationship to General Plan Development:

The proposed five stations are necessary to provide first-in capabilities to the Ontario Ranch area. These stations may on occasion support calls-for-service in other areas of the City, but will also receive support from other stations in return. As such the related costs are fully allocated to that planning area. This vehicle would be assigned to the Ontario Ranch area.

Allocation To General Plan Buildout: 86.88%

Reference Document:

None, projections are based upon a staff application of General Plan based response times.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: Fire Fighter Assigned Equipment

FS -014

Submitting Departments: Fire Department

Project Description:

.Acquire fire fighter assigned equipment. It cost the City some \$17,108 to outfit each firefighter. There will be a need for remaining 89 additional firefighters to staff the five proposed Ontario Ranch area stations.

Justification / Consequences of Avoidance:

The firefighters require personally-assigned equipment and cannot perform their duties without it.

Relationship to General Plan Development:

The proposed five stations are necessary to provide first-in capabilities to the Ontario Ranch area. These stations may on occasion support calls-for-service in other areas of the City, but will also receive support from other stations in return. As such the related costs are fully allocated to that planning area. This equipment is necessary for staffing in these five stations.

Allocation To General Plan Buildout: 86.88%

Reference Document:

None, projections are based upon a staff application of General Plan based response times.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: Fire Administrative Headquarters Relocation

FS -015

Submitting Departments: Fire Department

Project Description:

The project consists of relocating the Fire Administration service from its existing location in the City Hall Annex to a site generally located on West C Street between Laurel Avenue and Palm Avenue. Phase I would consist of acquiring the land located at 1408 East Francis Street. Phase II would consist of the design and construction of a new facility that would house Fire Administration, Fire Prevention and Education, Fire Dispatch and the City Emergency Operations Center (see FS-017). This facility would be approximately 30,000 square feet and occupy two floors.

Justification / Consequences of Avoidance:

Fire Administration was originally collocated with Fire Station #1 until Station #1 relocated to the City Hall Annex in 2013. The ultimate plan is to combine the Fire Station #1 Operations and Fire Administration operations into the same building on the west side of Euclid.

Relationship to General Plan Development:

The costs are pro-rated between existing and new development because it contains both expansion and rehabilitation components.

Allocation To General Plan Buildout: 56.04%

Reference Document:

None, projections are based upon a staff application of General Plan based response times.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. The facility is estimated to cost about \$1,050 per square foot.

PROPOSED EXPENDITURES	FY 2022-23	FY 2023-24	FY 2024-25	FY 2025-26	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	\$0	\$0	\$0	\$0	\$3,749,170	\$3,749,170
2. Land Acquisition / Right Of Way	\$0	\$0	\$0	\$0	\$0	\$0
3. Construction	\$0	\$0	\$0	\$0	\$24,994,466	\$24,994,466
4. Contingency	\$0	\$0	\$0	\$0	\$2,874,364	\$2,874,364
5. Equipment / Other	\$0	\$0	\$0	\$0	\$0	\$0
TOTAL COST:	\$0	\$0	\$0	\$0	\$31,618,000	\$31,618,000

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: Training Center Expansion

FS -016

Submitting Departments: Fire Department

Project Description:

The project consists of the construction of a combination of 10,400 S.F. training tower and training classroom space, office space and restrooms. There would also be a drafting pit constructed and additional practice facilities and apparatus.

Justification / Consequences of Avoidance:

New development will cause an appreciable increase in new fire-fighters and thus training activity at the City's training center. New development will generate an increase in full time staffing. This increased training activity will put considerable strain on the finite capabilities of the training facilities, particularly the training tower, creating competing demands for the limited classroom, space and physical training opportunities. The previously described facilities will allow the department to meet the on-going required training of new fire-fighters and the continuing education needs of long-term firefighters.

Relationship to General Plan Development:

The costs are pro-rated between new development in Ontario Ranch and the General City areas because the facility is at capacity now.

Allocation To General Plan Buildout: 100.00%

Reference Document:

No specific document, based upon proportional inventory expansion.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.

PROPOSED EXPENDITURES	FY 2022-23	FY 2023-24	FY 2024-25	FY 2025-26	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	\$0	\$0	\$0	\$0	\$1,141,114	\$1,141,114

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: City Emergency Operations Center

FS -017

Submitting Departments: Fire Department

Project Description:

Acquire and install multi-purpose audio, video, telecommunications and operational equipment in the Emergency Operations Center. The project consists of 6,500 square feet of interior improvements at about \$700 per square foot and the installation of \$500,000 in electronic equipment.

Justification / Consequences of Avoidance:

Given the recent relocation of the facility to the basement of the City Hall Annex facility, the project will provide the facility with the necessary audio/visual, telecommunications and operational equipment with which to manage any potential city emergencies. The facility will also be a back-up dispatch center and training venue.

Relationship to General Plan Development:

The costs are pro-rated between existing and new development because it is an expanded capacity.

Allocation To General Plan Buildout: 56.04%

Reference Document:

None, projections are based upon a staff application of General Plan based response times.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: Mobile Air And Lighting Support Vehicle

FS -019

Submitting Departments: Fire Department

Project Description:

Acquire a mobile air and lighting support vehicle. The truck (or cab/trailer) would consist of amiable lights for increasing visibility of any involved structure (during anytime of the day). In addition, the vehicle would have air bottle re-filling capacity.

Justification / Consequences of Avoidance:

The vehicle would provide increased visibility of involved structures, via external lighting, and would provide firefighters with an additional tool or on-site capability. Additionally, an on-site air bottle filling capability will be necessary for over-height and/or over-wide facilities requiring longer structural interior attacks. Acquisition would result in increased fire suppression response capacities by improving the firefighting conditions.

Relationship to General Plan Development:

The costs are pro-rated between existing and new development because it is a new and additional capacity.

Allocation To General Plan Buildout: 56.04%

Reference Document:

None, projections are based upon a staff application of General Plan based response times.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: Share Of Common City Yard Improvements

FS -021

Submitting Departments: Fire Department

Project Description:

Construct the following improvements: 1) Reconfigure some 60,000 square feet of a recently acquired warehouse and office space. 2) Pave approximately ten acres of currently dirt parking lot, primarily for the refuse operation refueling area. 3) Construct additional fleet maintenance operations bays. 4) Construct a new welding shop. 5) Increase security through additional fencing and lighting. and 6) Construct additional CNG fueling stations. The combined improvements have a total projected cost of \$44.5 million and are spread between all City operations that make use of the City yard.

Justification / Consequences of Avoidance:

This amount represents the proportional amount of a total estimated \$44.4 million in structural improvements to the City maintenance yard necessary to meet the increasing demands for greater fire suppression system vehicle maintenance capacity. The City has acquired adequate land and has existing structural capacity for the various maintenance demands. This demand for additional structural capacity results from the doubling of demand on all public infrastructures resulting from the development of the Ontario Ranch area and remaining portions of the General City.

Relationship to General Plan Development:

The project fully benefits new development in the General City and Ontario Ranch areas.

Allocation To General Plan Buildout: 100.00%

Reference Document:

None, projections are based upon a staff application of General Plan based response times.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: Fire Station Operations #1 Relocation

FS -023

Submitting Departments: Fire Department

Project Description:

This project consists of relocating Station #1 from its current location at 425 East B Street. The station would consist of five 1,400 square foot bays and living quarters for eight on-duty fire fighters, a fire investigator and a battalion chief. The desired location for relocation would be parcels at the corner of D Street and Sultana Avenue.

Justification / Consequences of Avoidance:

The current Fire Station #1 is over 60 years old and is in need of major and repeating repairs; additionally the station is not adequately sized to safely house the current personnel, equipment and apparatus needed at this very central location. The current parcel is undersized at 0.55 acres. The proposed location will allow for more rapid responses to emergency incidents in and around the downtown area as well as providing a more efficient and effective working environment for the response fire personnel.

Relationship to General Plan Development:

The facility relocation is needed to accommodate full General Plan development in the General City area without adding significant staffing costs.

Allocation To General Plan Buildout: 35.00%

Reference Document:

None, projections are based upon a staff application of General Plan based response times.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.

PROPOSED EXPENDITURES	FY 2022-23	FY 2023-24	FY 2024-25	FY 2025-26	G.P. Build-Out	Total all Years

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: Expand Station #3 (East Francis)

FS -024

Submitting Departments: Fire Department

Project Description:

Expand Station #3 to accommodate a second company. The existing station, the City's smallest, is located at 1408 East Francis adjacent to the fire and emergency training center. The expansion would consist of two bays at a total of 2,800 square feet, 745 square feet of mechanical and storage space and 2,070 square feet of additional dorm/shower/living space.

Justification / Consequences of Avoidance:

Full development in the General City area will more than double the annual medic/fire/emergency calls-for-service requiring the addition of an additional company. This station is centrally located and can respond to a great many of these additional calls-for-service.

Relationship to General Plan Development:

The facility expansion will be required to accommodate the additional calls-for-service resulting from full development within the General City area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

None, projections are based upon a staff application of General Plan based response times.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.

Submitting Departments: Engineering Department

Project Description:

Construct the additional lanes beyond the curb adjacent lane in each direction on Archibald Avenue from Riverside Drive to Edison Avenue (about 7,800 linear feet). The project segment, which may include one or more traffic signals included on ST-024, will be one of the key arterials/collectors servicing the Ontario Ranch area. Project costs include the raised landscape median and all lanes except the curb adjacent lane. The construction of the curb adjacent lane and frontage improvements will be constructed as a condition of approval. Contingency is included at 10% of the estimated construction cost. Project administration, consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs.

Justification / Consequences of Avoidance:

The City of Ontario's General Plan has identified these improvements as necessary to maintain an acceptable level of service (LOS). Failure to make the General Plan's recommended improvements would result in an unacceptable LOS F.

Relationship to General Plan Development:

The project is required to accommodate the traffic generated from the Ontario Ranch development as identified in the Ontario Ranch land use database.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Master Plan of Streets and Highways (September, 2011).

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail MFP 2021-2022 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Grove Avenue From Riverside To Merrill

ST -013

Submitting Departments: Engineering Department

Project Description:

Construct the additional lanes beyond the curb adjacent lane in each direction on Grove Avenue from Riverside Drive to Merrill Avenue (about 13,200 linear feet). The project segment, which may include one or more traffic signals included on ST-024, will be one of the key arterials/collectors servicing the Ontario Ranch area. Project costs include the raised landscape median and all lanes except the curb adjacent lane. The construction of the curb adjacent lane and frontage improvements will be constructed as a condition of approval. Contingency is included at 10% of the estimated construction cost. Project administration, consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs.

Justification / Consequences of Avoidance:

The City of Ontario's General Plan has identified these improvements as necessary to maintain an acceptable level of service (LOS). Failure to make the General Plan's recommended improvements would result in an unacceptable LOS F.

Relationship to General Plan Development:

The project is required to accommodate the traffic generated from the Ontario Ranch development as identified in the Ontario Ranch land use database.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Master Plan of Streets and Highways (September, 2011).

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

MFP 2021-2022 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Ontario Ranch Traffic Control System

ST -024

Submitting Departments: Engineering Department

Project Description:

Construct the Ontario Traffic Signal and Interconnect Control System. The improvements include the 1/2 mile backbone signals (consisting of 46 new signals and sixteen signal modifications, signal interconnect and intelligent transportation system costs) and key 1/4 mile signals (consisting of 56 new signals). Contingency is included at 10% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs. (Amended 09/14, text and costs).

Justification / Consequences of Avoidance:

The project will allow for reliable and redundant communication to traffic signals within the Ontario Ranch area. Failure to implement these improvements will result in significant delays to manage traffic incidents as the City's traffic demands reach build out.

Relationship to General Plan Development:

The project is consistent with the General Plan's Mobility Element in that it supplements the design and maintenance of the City's roadway network within the Ontario Ranch area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

New Model Colony Transportation Program Implementation Plan, February 2001.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System
Project Title / Ref#: Non-Dev. ROW, Frontage Imps. & SCE Pole Relocations
Submitting Departments: Engineering Department

ST -025

Project Description:

The project consists of four components: 1) ROW acquisition/construction of last lane improvements, including curb adjacent lane pavement and frontage improvements for non-developer (SCE, SOCALF, SBCFCD) properties fronting arterial/collector roadways (1.2 million SF at \$6/SF), 2) Relocation 405 existing SCE transmission poles (at \$53,000/pole) which impact the future construction of the ultimate width collector and arterial roadways, 3) Construction of the last lane improvements, including curb adjacent lane pavement and full frontage improvements of any arterial/collector street contiguous to the Great Park (17,500 LF at \$250/LF) and 4), Construction of the full width improvements including curb adjacent lane improvements and full frontage improvements of Grand Park Street along the 1,600 LF of future high school frontage.

Justification / Consequences of Avoidance:

Construction of improvements along non-developer frontage is required to provide uniform street cross-section and continuous path of travel for pedestrian, bicycle and vehicle traffic to ensure that an acceptable level of services is maintained.

Relationship to General Plan Development:

The project is required to accommodate the traffic generated from the Ontario Ranch development as identified in the Ontario Ranch land use database.

Allocation To General Plan Buildout: 100.00%

Reference Document:

2012 Street Development Impact Fee (DIF) Program Memo, May 8, 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Additional SCE Pole Relocation

ST -026

Submitting Departments: Engineering Department

Project Description:

The project consist of the relocation of Southern California Edison transmission poles at the northeast corner of Archibald Avenue and Ontario Ranch Road. Contingency is included at 10% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs

Justification / Consequences of Avoidance:

Construction of improvements along non-developer frontage is required to provide a uniform street cross section and continuous path of travel for pedestrians, bicycle and vehicle traffic, to ensure that an acceptable level of service (LOS) is maintained.

Relationship to General Plan Development:

The project is required to accommodate the traffic generated from Ontario Ranch development as identified in the Ontario Ranch land-use database.

MFP 2021-2022 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: OR Offsite Cantu Galleano Widening, I-15 To Milliken

ST -029

Submitting Departments: Engineering Department

Project Description:

The project consists of financial contribution towards the cost of constructing I-15 and Cantu Galleano street widening in Riverside County. The project is limited to a calculated financial contribution and results in no overhead or contingency being added to the total cost.

Justification / Consequences of Avoidance:

The City of Ontario's General Plan has identified these improvements as necessary to maintain an acceptable level of service (LOS). Failure to make the General Plan's recommended improvements would result in an unacceptable LOS F.

Relationship to General Plan Development:

The project is required to accommodate the traffic generated from the Ontario Ranch development as identified in the Ontario Ranch land use database.

MFP 2021-2022 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: General City Street Lights

ST -033

Submitting Departments: Engineering Department

Project Description:

The project consists of the construction of approximately 600 street lights in various locations in the General City lacking adequate street lighting at roughly \$6,200 per light pole to complete the system of 11,500 existing street lights. Contingency is included at 10% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs.

Justification / Consequences of Avoidance:

The City of Ontario has identified these improvements as necessary to illuminate remaining sections of streets. Failure to implement these improvements would result in unsatisfactory illumination levels in areas of new development. The city conforms to guidelines recommended by the Illuminating Engineering Society (IES).

Relationship to General Plan Development:

The General Plan's Roadway System Section requires roadways to comply with industry standard design and safety practices.

Allocation To General Plan Buildout: 100.00%

Reference Document:

2012 Street Development Impact Fee (DIF) Program Memo, May 8, 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: General City Traffic Signals

ST -034

Submitting Departments: Engineering Department

Project Description:

Construct twenty-four (24) new and modify seven (7) existing traffic signals, including emergency vehicle pre-emption and battery backup system modifications within the General City. Contingency is included at 10% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs

Justification / Consequences of Avoidance:

The project will allow for reliable and redundant communication to traffic signals within the General City. Failure to implement these improvements will result in significant delays to manage traffic incidents as the City's traffic demands reach build out

Relationship to General Plan Development:

The project is consistent with the General Plan's Mobility Element in that it supplements the design and maintenance of the city's roadway network.

Allocation To General Plan Buildout: 100.00%

Reference Document:

2012 Street Development Impact Fee (DIF) Program Memo, May 8, 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Bon View Avenue From Mission To Belmont

ST -039

Submitting Departments: Engineering Department

Project Description:

Widen Bon view Avenue to reflect current Master Plan of Streets and Highways from Mission Boulevard to Belmont Street (about 900 linear feet). Project cost includes reconstruction and relocation of existing curb & gutter, landscape parkway, sidewalk, streetlights and modification of traffic signals to their ultimate location. Right of way acquisition is included at 20% of the estimated construction cost. Contingency is included at 10% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction, ROW and contingency costs. (Amended 09/14, Measure I percent change).

Justification / Consequences of Avoidance:

The City of Ontario's General Plan has identified these improvements as necessary to maintain an acceptable level of service (LOS). Failure to make the General Plan's recommended improvements would result in an unacceptable LOS F.

Relationship to General Plan Development:

The project is required to accommodate the traffic generated from the General City development as identified in the General City area land use database.

Allocation To General Plan Buildout: 44.00%

Reference Document:

Master Plan of Streets and Highways (September, 2011).

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Holt Boulevard From Benson To Vineyard

ST -053

Submitting Departments: Engineering Department

Project Description:

Widen Holt Boulevard to reflect current Master Plan of Streets and Highways from Benson Avenue to Vineyard Avenue (about 23,100 linear feet). Project cost includes reconstruction and relocation of existing curb & gutter, landscape parkway, sidewalk, streetlights, raised landscape median and modification of traffic signals to their ultimate location. Right of way acquisition is included at 20% of the estimated construction cost. Contingency is included at 10% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction, ROW and contingency costs. (Amended 09/14, cost change).

Justification / Consequences of Avoidance:

The City of Ontario's General Plan has identified these improvements as necessary to maintain an acceptable level of service (LOS). Failure to make the General Plan's recommended improvements would result in an unacceptable LOS F.

Relationship to General Plan Development:

The project is required to accommodate the traffic generated from the General City development as identified in the General City area land use database.

Allocation To General Plan Buildout: 44.00%

Reference Document:

Master Plan of Streets and Highways (September, 2011).

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Project Description:

Widen Philadelphia Street to reflect current Master Plan of Streets and Highways from East of Vineyard Avenue to Cucamonga Creek (about 2,200 linear feet). Project cost includes construction of curb & gutter, landscape parkway, sidewalk and streetlights to their ultimate location. Contingency is included at 10% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs.

Justification / Consequences of Avoidance:

The City of Ontario's General Plan has identified these improvements as necessary to maintain an acceptable level of service (LOS). Failure to make the General Plan's recommended improvements would result in an unacceptable LOS F.

Relationship to General Plan Development:

The project is required to accommodate the traffic generated from the General City development as identified in the General City area land use database.

Allocation To General Plan Buildout: 44.00%

Reference Document:

Master Plan of Streets and Highways (September, 2011).

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

The City of Ontario's General Plan has identified these improvements as necessary to maintain an acceptable level of service (LOS). Failure to make the General Plan's recommended improvements would result in an unacceptable LOS F.

Relationship to General Plan Development:

The Project is required to maintain existing traffic flow along this segment and provide additional capacity for anticipated additional traffic demands.

Allocation To General Plan Buildout: 44.00%

Reference Document:

Master Plan of Streets and Highways (September, 2011).

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Vine (S) Line Grade Separation Under UPRR/LA Line

ST -099

Submitting Departments: Engineering Department

Project Description:

Construct the south Vine Avenue grade separation under the Union Pacific Railroad Los Angeles Line. Contingency is included at 10% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs.

Justification / Consequences of Avoidance:

The project will eliminate conflicts and delays associated with at-grade roadway/rail road crossings. Failure to implement these improvements will result in increased delays as both vehicle and rail traffic is expected to increase.

Relationship to General Plan Development:

The General Plan's Goods Movement Section identifies the elimination of the at-grade rail crossing at this location.

Allocation To General Plan Buildout: 0.00%

Reference Document:

2012 Street Development Impact Fee (DIF) Program Memo, May 8, 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System
Project Title / Ref#: Pavement Management System Rehabilitation Program
Submitting Departments: Engineering Department

ST -102

Project Description:

Reconstruct street segments as identified by the Pavement Management Program. These street segments represent ordinary wear and tear on existing streets and existing business demands. Contingency is included at 10% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs

Justification / Consequences of Avoidance:

The City of Ontario has identified these improvements as necessary to maintain an acceptable level of service (LOS). Failure to make the recommended improvements would result in an unacceptable LOS F.

Relationship to General Plan Development:

The project is required to merely maintain and maximize existing traffic flow along all existing City street segments.

Allocation To General Plan Buildout: 0.00%

Reference Document:

The street segments within this project are generated by the City's Pavement Management Program.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail MFP 2021-2022 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System
Project Title / Ref#: Circulation System Maintenance Vehicles
Submitting Departments: Engineering Department

ST -103

Project Description:

Acquire additional circulation system maintenance vehicles proportional to the increase in both lane miles constructed and trip-ends generated new development in both the Ontario Ranch and General City areas.

Justification / Consequences of Avoidance:

The existing inventory of circulation system maintenance vehicles would be incapable of maintaining the near doubling of street lane-miles, bridges and traffic signals.

Relationship to General Plan Development:

The project is required merely to maintain the City's capacity to maintain all roads that are accepted upon dedication to the City after construction.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Based upon proportional analysis of existing fleet and equipment and future additional infrastructure.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

MFP 2021-2022 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Great Park Bridge Over Archibald Avenue

ST -104

Submitting Departments: Engineering Department

Project Description:

Construct a decorative bridge including end monuments over Archibald Avenue along the proposed Great Park greenbelt to allow for safe pedestrian/cyclist access from the east and west side of the park.

Justification / Consequences of Avoidance:

The project is necessary to maximize the use of the full park without obstructing traffic on Archibald Avenue.

Relationship to General Plan Development:

The project is required to accommodate the traffic generated from the Ontario Ranch areadevelopment as identified in the Ontario ranch area land use database.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Project estimate dated September 9, 2002.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System
Project Title / Ref#: SR-60 At Vineyard Interchange Reconstruction/Expansion
Submitting Departments: Engineering Department

ST -105

Project Description:

The project consists of improvements and capacity expansion of the SR-60 at Vineyard Avenue Interchange. Contingency is included at 10% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs

Justification / Consequences of Avoidance:

These improvements are necessary to increase the interchange's capacity to accommodate anticipated growth in the Ontario Ranch area. Failure to implement these improvements will result in unsatisfactory interchange capacity.

Relationship to General Plan Development:

The General Plan's Mobility Element promotes local and regional transportation solutions. The project will relieve congestion by distributing demand in conformance with the General Plan.

Allocation To General Plan Buildout: 56.30%

Reference Document:

SANBAG Nexus Study.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

MFP 2021-2022 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: I-10 Freeway At Grove/Fourth

ST -111

Submitting Departments: Engineering Department

Project Description:

The project consists of improvements and capacity expansion of the I-10 at Grove/Fourth Interchange. Project administration consisting of engineering, construction management and contract administration is included at 10% of the construction costs and contingency at 10% of construction costs.

Justification / Consequences of Avoidance:

The interchange improvements are intended to provide operational, safety and capacity improvements to the interchange system and provide a better and more uniform access for freeway traffic to local destinations (and vice versa); including to and from the Ontario International Airport. Failure to implement these improvements will result in critical deficiencies that will be further exacerbated by future growth.

Relationship to General Plan Development:

The General Plan's Mobility Element promotes local and regional transportation solutions. The project will relieve congestion by distributing demand in conformance with the General Plan.

Allocation To General Plan Buildout: 10.90%

Reference Document:

DRAFT PSR estimate.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Traffic Signal System Control And Operations Center

Submitting Departments: Engineering Department

ST -112

Project Description:

Construct improvements to the Traffic Signal System Control and Operations Center. Contingency is included at 10% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs.

Justification / Consequences of Avoidance:

The project will create a traffic management facility where signal timing plans and traffic management plans can be quickly and efficiently implemented in order to reduce congestion, handle varying traffic conditions and improve road safety. Failure to implement the improvements will result in significant delays to manage traffic incidents as the city's traffic demands reach build out.

Relationship to General Plan Development:

The project is consistent with the General Plan's Mobility Element in that it supplements the design and maintenance of the City's roadway network.

Allocation To General Plan Buildout: 100.00%

Reference Document:

2012 Street Development Impact Fee (DIF) Program Memo, May 8, 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

PROPOSED EXPENDITURES	FY 2022-23	FY 2023-24	FY 2024-25	FY 2025-26	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	\$0	\$0	\$0	\$0	\$297,628	\$297,628
2. Land Acquisition / Right Of Way	\$0	\$0	\$0	\$0	\$0	\$0

MFP 2021-2022 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: General City Backbone Signal Interconnect

ST -113

Submitting Departments: Engineering Department

Project Description:

Construct improvements to the General City area Backbone Signal Interconnect system. Contingency is included at 10% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs.

Justification / Consequences of Avoidance:

The project will allow for reliable and redundant communication to traffic signals within the General City. Failure to implement these improvements will result in significant delays to manage traffic incidents as the City's traffic demands reach build out.

Relationship to General Plan Development:

The project is consistent with the General Plan's Mobility Element in that it supplements the design and maintenance of the City's roadway network.

Allocation To General Plan Buildout: 20.00%

Reference Document:

2012 Street Development Impact Fee (DIF) Program Memo, May 8, 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

PROPOSED EXPENDITURES	FY 2022-23	FY 2023-24	FY 2024-25	FY 2025-26	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: I-10 At Euclid Avenue Eastbound On Ramp

ST -114

Submitting Departments: Engineering Department

Project Description:

The project consists of improvements and capacity expansion of the I-10 at Euclid Avenue eastbound on ramp. Contingency is included at 10% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs.

Justification / Consequences of Avoidance:

These improvements are necessary to increase the interchange's capacity to accommodate anticipated growth in the General City area. Failure to implement these improvements will result in unsatisfactory interchange capacity.

Relationship to General Plan Development:

The General Plan's Mobility Element promotes local and regional transportation solutions. The project will relieve congestion by distributing demand in conformance with the General Plan.

Allocation To General Plan Buildout: 7.00%

Reference Document:

SANBAG Nexus Study.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Share Of Common City Yard Improvements

ST -126

Submitting Departments: Engineering Department

Project Description:

Construct the following improvements: 1) Reconfigure some 60,000 square feet of a recently acquired warehouse and office space. 2) Pave approximately ten acres of currently dirt parking lot, primarily for the refuse operation refueling area. 3) Construct additional fleet maintenance operations bays. 4) Construct a new welding shop. 5) Increase security through additional fencing and lighting. 6) Construct additional CNG fueling stations and 7) reconfigure a recently acquired 24,000 square foot building into covered parking to maximize fleet lifetime. The combined improvements have a total projected cost of \$38.2 million and are spread between all City operations that make use of the City yard.

Justification / Consequences of Avoidance:

This amount represents the proportional amount of a total estimated \$38.2 million in structural improvements to the City maintenance yard necessary to meet the increasing demands for greater circulation system maintenance capacity. The City has acquired adequate land and has existing structural capacity for the various maintenance demands. This demand for additional structural capacity results from the doubling of all public infrastructures from the Ontario Ranch area and remaining portions of the General City area.

Relationship to General Plan Development:

The project benefits both existing and future development within the General City and Ontario Ranch areas.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Based upon an analysis of demands on City yard capacity and expansion needs.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail MFP 2021-2022 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Ontario Ranch Bus Stop Shelters

ST -127

Submitting Departments: Engineering Department

Project Description:

Construct the Ontario Ranch bus stop shelters. The improvements include 218 bus stops throughout the Ontario Ranch area. Labor for the installation is included at 10% of the materials cost and contingency is included at 10% of total construction and labor costs. (Added 09/14, project added).

Justification / Consequences of Avoidance:

The project will allow for future bus shelter installations at currently identified locations which will be furnished with a bus pad or bus turnout.

Relationship to General Plan Development:

The project is consistent with the General Plan's Mobility Element in that it supplies a reliable alternative transportation system and provides a viable alternative to the automobile.

Allocation To General Plan Buildout: 100.00%

Reference Document:

New Model Colony Bus Facility Justification Study, August 2007 and memo RE: ST-128.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.

PROPOSED EXPENDITURES	FY 2022-23	FY 2023-24	FY 2024-25	FY 2025-26	G.P Build-Out	Total all Years

Master Facilities Plan Project Detail MFP 2021-2022 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Ontario Ranch Design Studies

ST -128

Submitting Departments: Engineering Department

Project Description:

Recovery of costs incurred by the Ontario Ranch Construction group expended on behalf of all other developments. The Master Plan studies include: 1. Master Plan of Infrastructure Alignments, 2. GIS System Integration Traffic Studies, Rights-of-way Studies, Streetscape Master Plan and the Pavement design document. (Added 09/14, study reimbursement costs).

Justification / Consequences of Avoidance:

The studies were necessary to develop infrastructure requirements that define and benefit all development in the Ontario Ranch area.

Relationship to General Plan Development:

The project is consistent with the General Plan's Mobility Element in that it supplements the design and maintenance of the City's Roadway Network.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Ontario Ranch (formerly NMC) Construction Agreement.

Project Timing:

As needed and as available.

MFP 2021-2022 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Fourth Street Under The I-10 Freeway

ST -129

Submitting Departments: Engineering Department

Project Description:

The project consists of the widening of Fourth Street under the I-10 Freeway. The I-10 Corridor Project costs will include the reconstructing the bridge. The cost of improvements will be shared with SANBAG at 53.68% share and the City at 46.32% share per cooperative agreement 17-1001713.

Justification / Consequences of Avoidance:

These improvements are necessary to increase the interchanges capacity to accommodate anticipated growth in the General City area. The

Relationship to General Plan Development:

The project is consistent with the General Plan's Mobility Element in that it supplements the design and maintenance of the City's Roadway Network

Allocation To General Plan Buildout: 46.23%

Reference Document:

None, staff projections.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System
Project Title / Ref#: Guasti Road Extension From 1,530' E/O Haven Easterly 310'
Submitting Departments: Engineering Department

ST -130

Project Description:

Extend Guasti Road to reflect current Master Plan of Streets and Highways from 1,530 feet east of Haven (about 310 feet). Project costs include street, curb, gutter, landscaped parkway, sidewalk, street lights, truck filter and abandoning/constructing a water meter and fire double detector check.

Justification / Consequences of Avoidance:

The City of Ontario's General Plan has identified these improvements as necessary to maintain an acceptable level of service (LOS) in light of additional lane mile demands created by new development. Failure to make these General Plan recommended improvements would result in an unacceptable LOS F.

Relationship to General Plan Development:

The project is consistent with the General Plan's Mobility Element in that it supplements the design and maintenance of the City's Roadway Network

Allocation To General Plan Buildout: 100.00%

Reference Document:

None, staff projections.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Storm Drainage Collection System Facilities

Project Title / Ref#: Euclid Avenue, Riverside To Merrill

SD -001

Submitting Departments: Engineering Department

Project Description:

Construct 13,200 linear feet of storm drain system along Euclid Avenue from Riverside Drive to Merrill Avenue, identified as EULD-XIV-1 in the City of Ontario Master Plan of Drainage (March 2012). Contingency is included at 10% of the estimated construction cost. Project Administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

These drainage improvements are needed to provide efficient and timely storm water removal. Storm water will increase in amounts proportional to the percentage of development on an acre due to the decrease in the amount of pervious (i.e. dirt/turf) surface available for infiltration. The cumulative amount of development will create significant amounts of storm water run-off that must be dealt with safely and quickly. Potential flooding of major and secondary arterials including most residential and business areas may occur as development continues to increase the City's overall percentage of impervious surface (i.e. buildings, parking lots, streets, etc.). Additionally, emergency vehicle response maybe impacted due to unmitigated flooding conditions.

Relationship to General Plan Development:

The project is related to the collection and removal of storm water from the Ontario Ranch (OR) area and is likely totally within that area. The amount of any project costs not fully attributed to the OR area (if any) represents the percentage of storm water collected or moved by that segment of pipe was not generated by rainfall within the OR area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Master Plan of Storm Drainage, March 2012, as amended by the change in the ENR Construction Cost Index since 03/2012.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, OR projects will be constructed as needed and as DIF receipts are collected. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Storm Drainage Collection System Facilities

Project Title / Ref#: Grove Avenue, Grove Basin To Merrill

SD -002

Submitting Departments: Engineering Department

Project Description:

Construct 11,900 linear feet of storm drain system along Grove Avenue from Grove Basin (located south of Riverside Drive) to Merrill Avenue, identified as GROV-XIII-1 in the City of Ontario Master Plan of Drainage (March 2012). Contingency is included at 10% of the estimated construction cost. Project Administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

These drainage improvements are needed to provide efficient and timely storm water removal. Storm water will increase in amounts proportional to the percentage of development on an acre due to the decrease in the amount of pervious (i.e. dirt/turf) surface available for infiltration. The cumulative amount of development will create significant amounts of storm water run-off that must be dealt with safely and quickly. Potential flooding of major and secondary arterials including most residential and business areas may occur as development continues to increase the City's overall percentage of impervious surface (i.e. buildings, parking lots, streets, etc.). Additionally, emergency vehicle response maybe impacted due to unmitigated flooding conditions.

Relationship to General Plan Development:

The project is related to the collection and removal of storm water from the Ontario Ranch (OR) area and is likely totally within that area. The amount of any project costs not fully attributed to the OR area (if any) represents the percentage of storm water collected or moved by that segment of pipe was not generated by rainfall within the OR area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Master Plan of Storm Drainage, March 2012, as amended by the change in the ENR Construction Cost Index since 03/2012.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, OR projects will be constructed as needed and as DIF receipts are collected. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Storm Drainage Collection System Facilities

Project Title / Ref#: Walker Avenue, Eucalyptus To Chino

SD -013

Submitting Departments: Engineering Department

Project Description:

Construct 9,300 linear feet of storm drain system along Walker Avenue from Eucalyptus Avenue to Chino Avenue, identified as WLKR-XII-1 in the City of Ontario Master Plan of Drainage (March 2012, amended 2017). Contingency is included at 10% of the estimated construction cost. Project Administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

These drainage improvements are needed to provide efficient and timely storm water removal. Storm water will increase in amounts proportional to the percentage of development on an acre due to the decrease in the amount of pervious (i.e. dirt/turf) surface available for infiltration. The cumulative amount of development will create significant amounts of storm water run-off that must be dealt with safely and quickly. Potential flooding of major and secondary arterials including most residential and business areas may occur as development continues to increase the City's overall percentage of impervious surface (i.e. buildings, parking lots, streets, etc.). Additionally, emergency vehicle response maybe impacted due to unmitigated flooding conditions.

Relationship to General Plan Development:

The project is related to the collection and removal of storm water from the Ontario Ranch (OR) area and is likely totally within that area. The amount of any project costs not fully attributed to OR area (if any) represents the percentage of storm water collected or moved by that segment of pipe was not generated by rainfall within the OR area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Master Plan of Storm Drainage, March 2012, as amended by the change in the ENR Construction Cost Index since 03/2012.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, OR projects will be constructed as needed and as DIF receipts are collected. All costs are at nominal, or current dollar value.

Project Description:

Construct 1,900 linear feet of storm drain system along Ontario Ranch Road (Edison) from Walker Avenue to 1,900 feet east of Walker Avenue, identified as WLKR-XII-3 in the City of Ontario Master Plan of Drainage (March 2012). Contingency is included at 10% of the estimated construction cost. Project Administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

These drainage improvements are needed to provide efficient and timely storm water removal. Storm water will increase in amounts proportional to the percentage of development on an acre due to the decrease in the amount of pervious (i.e. dirt/turf) surface available for infiltration. The cumulative amount of development will create significant amounts of storm water run-off that must be dealt with safely and quickly. Potential flooding of major and secondary arterials including most residential and business areas may occur as development continues to increase the City's overall percentage of impervious surface (i.e. buildings, parking lots, streets, etc.). Additionally, emergency vehicle response maybe impacted due to unmitigated flooding conditions.

Relationship to General Plan Development:

The project is related to the collection and removal of storm water from the Ontario Ranch (OR) area and is likely totally within that area. The amount of any project costs not fully attributed to OR area (if any) represents the percentage of storm water collected or moved by that segment of pipe was not generated by rainfall within the OR area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Master Plan of Storm Drainage, March 2012, as amended by the change in the ENR Construction Cost Index since 03/2012.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, OR projects will be constructed as needed and as DIF receipts are collected. All costs are at nominal, or current dollar value.

PROPOSED EXPENDITURES	FY 2022-23	FY 2023-24	FY 2024-25	FY 2025-26	G.P. Build-Out	Total all Years

Storm water will increase in amounts proportional to the percentage of development on an acre due to the decrease in the amount of pervious (i.e. dirt/turf) surface available for infiltration. The cumulative amount of development will create significant amounts of storm water run-off that must be dealt with safely and quickly. Potential flooding of major and secondary arterials including most residential and business areas may occur as development continues to increase the City's overall percentage of impervious surface (i.e. buildings, parking lots, streets, etc.). Additionally, emergency vehicle response maybe impacted due to unmitigated flooding conditions.

Relationship to General Plan Development:

The project is related to the collection and removal of storm water from the Ontario Ranch (OR) area and is likely totally within that area. The amount of any project costs not fully attributed to OR area (if any) represents the percentage of storm water collected or moved by that segment of pipe was not generated by rainfall within the OR area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Master Plan of Storm Drainage, March 2012, as amended by the change in the ENR Construction Cost Index since 03/2012.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, OR projects will be constructed as needed and as DIF receipts are collected. All costs are at nominal, or current dollar value.

PROPOSED EXPENDITURES	FY 2022-23	FY 2023-24	FY 2024-25	FY 2025-26	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Storm Drainage Collection System Facilities
Project Title / Ref#: Haven Avenue Laterals E/O Haven And N/O Schaefer
Submitting Departments: Engineering Department

SD -029

Project Description:

Construct 4,300 linear feet of storm drain system north of Schaefer Avenue and east of Haven Avenue, identified as HAVN-X-3 in the City of Ontario Master Plan of Drainage (March 2012). Contingency is included at 10% of the estimated construction cost. Project Administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

These drainage improvements are needed to provide efficient and timely storm water removal. Storm water will increase in amounts proportional to the percentage of development on an acre due to the decrease in the amount of pervious (i.e. dirt/turf) surface available for infiltration. The cumulative amount of development will create significant amounts of storm water run-off that must be dealt with safely and quickly. Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Storm Drainage Collection System Facilities
Project Title / Ref#: Eucalyptus Avenue, Hellman To Cucamonga Channel
Submitting Departments: Engineering Department

SD -040

Project Description:

Construct 1,600 linear feet of storm drain system along Eucalyptus Avenue from 720 feet west of Hellman Avenue to Cucamonga Channel, identified as HLMN-XI-1 in the City of Ontario Master Plan of Drainage (March 2012). Contingency is included at 10% of the estimated construction cost. Project Administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

These drainage improvements are needed to provide efficient and timely storm water removal. Storm water will increase in amounts proportional to the percentage of development on an acre due to the decrease in the amount of pervious (i.e. dirt/turf) surface available for infiltration. The cumulative amount of development will create significant amounts of storm water run-off that must be dealt with safely and quickly. Potential flooding of major and secondary arterials including most residential and business areas may occur as development continues to increase the City's overall percentage of impervious surface (i.e. buildings, parking lots, streets, etc.). Additionally, emergency vehicle response maybe impacted due to unmitigated flooding conditions.

Relationship to General Plan Development:

The project is related to the collection and removal of storm water from the Ontario Ranch (OR) area and is likely totally within that area. The amount of any project costs not fully attributed to OR area (if any) represents the percentage of storm water collected or moved by that segment of pipe was not generated by rainfall within the OR area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Master Plan of Storm Drainage, March 2012, as amended by the change in the ENR Construction Cost Index since 03/2012.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, OR projects will be constructed as needed and as DIF receipts are collected. All costs are at nominal, or current dollar value.

PROPOSED EXPENDITURES	FY 2022-23	FY 2023-24	FY 2024-25	FY 2025-26	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Storm Drainage Collection System Facilities

Project Title / Ref#: Sixth Street, Glenn To Cucamonga Channel

SD -056

Submitting Departments: Engineering Department

Project Description:

Construct 9,000 linear feet of storm drain system along Sixth Street from Glenn Avenue to Cucamonga Channel, Vineyard from Seventh Street to Sixth Street and Baker Avenue from 400 feet north of Sixth Street to Sixth Street, identified as 6TH-IV-1 through 6TH-IV-4 in the City of Ontario Master Plan of Drainage (March 2012). Contingency is included at 15% of the estimated construction cost. Project Administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

These drainage improvements are needed to provide efficient and timely storm water removal. Storm water will increase in amounts proportional to the percentage of development on an acre due to the decrease in the amount of pervious (i.e. dirt/turf) surface available for infiltration. The cumulative amount of development will create significant amounts of storm water run-off that must be dealt with safely and quickly. Potential flooding of major and secondary arterials including most residential and business areas may occur as development continues to increase the City's overall percentage of impervious surface (i.e. buildings, parking lots, streets, etc.). Additionally, emergency vehicle response maybe impacted due to unmitigated flooding conditions.

Relationship to General Plan Development:

The project is related to the collection and removal of storm water from within the General City area and is likely to be totally within that area. The amount of any project costs not fully attributed to new development within General City area (if any) represents the percentage of proposed storm water collection lines currently needed (or a portion thereof) thus that percentage is recognized as a current deficiency and will need to be financed by sources other than DIFs.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Master Plan of Storm Drainage, March 2012, as amended by the change in the ENR Construction Cost Index since 03/2012.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, General City area projects will be constructed as needed and as local DIF receipts are collected. All costs are at nominal, or current dollar value.

PROPOSED EXPENDITURES	FY 2022-23	FY 2023-24	FY 2024-25	FY 2025-26	G.P. Build-Out	Total all Years

Project Administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction/contingency cost

Justification / Consequences of Avoidance:

These drainage improvements are needed to provide efficient and timely storm water removal. Storm water will increase in amounts proportional to the percentage of development on an acre due to the decrease in the amount of pervious (i.e. dirt/turf) surface available for infiltration. The cumulative amount of development will create significant amounts of storm water run-off that must be dealt with safely and quickly. Potential flooding of major and secondary arterials including most residential and business areas may occur as development continues to increase the City's overall percentage of impervious surface (i.e. buildings, parking lots, streets, etc.). Additionally, emergency vehicle response may be impacted due to unmitigated flooding conditions.

Relationship to General Plan Development:

The project is related to the collection and removal of storm water from within the General City area and is likely to be totally within that area. The amount of any project costs not fully attributed to new development within General City area (if any) represents the percentage of proposed storm water collection lines currently needed (or a portion thereof) thus that percentage is recognized as a current deficiency and will need to be financed by sources other than DIFs.

Allocation To General Plan Buildout: 0.00%

Reference Document:

Master Plan of Storm Drainage, March 2012, as amended by the change in the ENR Construction Cost Index since 03/2012.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, GC projects will be constructed as needed and as local DIF receipts are collected. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Storm Drainage Collection System Facilities

Project Title / Ref#: Storm Drainage Maintenance Vehicles

SD -069

Submitting Departments: Engineering Department

Project Description:

Expand the fleet of maintenance vehicles necessary to maintain the proportionally expanded amount of storm drainage line capacity, as represented by the construction projects within this chapter.

Justification / Consequences of Avoidance:

As the storm drainage system is expanded there will be an increased demand upon the existing vehicles dedicated to the maintenance of the storm drainage collection system. The additional vehicles will be necessary to avoid any decrease in the existing capability to maintain the existing system

Relationship to General Plan Development:

The proposed vehicles are fully related to additional demands created by new development thus are fully attributed to new development.

Allocation To General Plan Buildout: 100.00%

Reference Document:

No specific document, based upon proportional inventory expansion.

Project Timing:

As development Impact Fees are collected and the existing fleet is incapable of meeting all maintenance demands

Project Title / Ref#: San Sevaine Channel

SD -074

Submitting Departments: Engineering Department

Project Description:

The DIF amount represents the City's fair share cost of the County of San Bernardino San Sevaine Channel construction project (located east of and outside of City limits).

Justification / Consequences of Avoidance:

These drainage improvements are needed to provide efficient and timely storm water removal. Storm water will increase in amounts proportional to the percentage of development on an acre due to the decrease in the amount of pervious (i.e. dirt/turf) surface available for infiltration. The cumulative amount of development will create significant amounts of storm water run-off that must be dealt with safely and quickly. Potential flooding of major and secondary arterials including most residential and business areas may occur as development continues to increase the City's overall percentage of impervious surface (i.e. buildings, parking lots, streets, etc.). Additionally, emergency vehicle response maybe impacted due to unmitigated flooding conditions.

Relationship to General Plan Development:

The project is related to the collection and removal of storm water from within the General City area and is likely to be totally within that area. The amount of any project costs not fully attributed to new development within General City area (if any) represents the percentage of proposed storm water collection lines currently needed (or a portion thereof) thus that percentage is recognized as a current deficiency and will need to be financed by sources other than DIFs.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Master Plan of Storm Drainage, March 2012, as amended by the change in the ENR Construction Cost Index since 03/2012.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, GC projects will be constructed as needed and as local DIF receipts are collected. All costs are at nominal, or current dollar value.

PROPOSED EXPENDITURES	FY 2022-23	FY 2023-24	FY 2024-25	FY 2025-26	G.P. Build-Out	Total all Years

MFP 2021-2022 Update

Infrastructure: Storm Drainage Collection System Facilities

Project Title / Ref#: Storm Drain Master Plan

SD -075

Submitting Departments: Engineering Department

Project Description:

Update the City's Storm Drain Master Plan to reflect changes to the City's General Plan and development standards.

Justification / Consequences of Avoidance:

The project is required for proper storm drainage collection planning.

Relationship to General Plan Development:

Direct to new development in both the General City and Ontario Ranch portions of the City.

Allocation To General Plan Buildout: 100.00%

Reference Document:

None, staff projections.

Project Timing:

As needed.

Relationship to General Plan Development:

The project is related to the collection and removal of storm water from within the General City area and is likely to be totally within that area. The amount of any project costs not fully attributed to new development within General City area (if any) represents the percentage of proposed storm water collection lines currently needed (or a portion thereof) thus that percentage is recognized as a current deficiency and will need to be financed by sources other than DIFs.

Allocation To General Plan Buildout: 0.00%

Reference Document:

Master Plan of Storm Drainage, March 2012, as amended by the change in the ENR Construction Cost Index since 03/2012.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, GC projects will be constructed as needed and as local DIF receipts are collected. All costs are at nominal, or current dollar value.

PROPOSED EXPENDITURES	FY 2022-23	FY 2023-24	FY 2024-25	FY 2025-26	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	\$0	\$0	\$0	\$0	\$574,820	\$574,820
2. Land Acquisition / Right Of Way	\$0	\$0	\$0	\$0	\$0	\$0

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Storm Drainage Collection System Facilities
Project Title / Ref#: Mountain Avenue, State To Phillips (Phase 2 Of SD-072)
Submitting Departments: Engineering Department

SD -085

Project Description:

Construct 4,300 linear feet of storm drain system along Mountain Avenue from State Street to Phillips Street (and connect to Project SD-072) and Mission Boulevard from Magnolia Avenue to Palmetto Avenue, identified as MNTN-VII-1b and MNTN-VII-6 in the City of Ontario Master Plan of Drainage (March 2012). Contingency is included at 15% of the estimated construction cost. Project Administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction/contingency cost. This project is the second phase of the Storm Drainage project number SD-072.

Justification / Consequences of Avoidance:

These drainage improvements are needed to provide efficient and timely storm water removal. Storm water will increase in amounts proportional to the percentage of development on an acre due to the decrease in the amount of pervious (i.e. dirt/turf) surface available for infiltration. The cumulative amount of development will create significant amounts of storm water run-off that must be dealt with safely and quickly. Potential flooding of major and secondary arterials including most residential and business areas may occur as development continues to increase the City's overall percentage of impervious surface (i.e. buildings, parking lots, streets, etc.). Additionally, emergency vehicle response maybe impacted due to unmitigated flooding conditions.

Relationship to General Plan Development:

The project is related to the collection and removal of storm water from within the General City area and is likely to be totally within that area. The amount of any project costs not fully attributed to new development within General City area (if any) represents the percentage of proposed storm water collection lines currently needed (or a portion thereof) thus that percentage is recognized as a current deficiency and will need to be financed by sources other than DIFs.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Storm Drainage Collection System Facilities

Project Title / Ref#: Sultana Avenue, Fifth To Holt

SD -094

Submitting Departments: Engineering Department

Project Description:

Construct 10,300 linear feet of storm drain system along Sultana Avenue from Fifth Street to Holt Boulevard, J Street from Euclid Avenue to Sultana Avenue and Melrose Avenue from Holt Boulevard to Emporia Street, identified as SULT-V-1, SULT-V-2 and MTRY-V-1 in the City of Ontario Master Plan of Drainage (March 2012). Contingency is included at 15% of the estimated construction cost. Project Administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction/contingency cost. This is a new project based on the Master Plan of Drainage update in March of 2012.

Justification / Consequences of Avoidance:

These drainage improvements are needed to provide efficient and timely storm water removal. Storm water will increase in amounts proportional to the percentage of development on an acre due to the decrease in the amount of pervious (i.e. dirt/turf) surface available for infiltration. The cumulative amount of development will create significant amounts of storm water run-off that must be dealt with safely and quickly. Potential flooding of major and secondary arterials including most residential and business areas may occur as development continues to increase the City's overall percentage of impervious surface (i.e. buildings, parking lots, streets, etc.). Additionally, emergency vehicle response maybe impacted due to unmitigated flooding conditions.

Relationship to General Plan Development:

The project is related to the collection and removal of storm water from within the General City area and is likely to be totally within that area. The amount of any project costs not fully attributed to new development within General City area (if any) represents the percentage of proposed storm water collection lines currently needed (or a portion thereof) thus that percentage is recognized as a current deficiency and will need to be financed by sources other than DIFs.

Allocation To General Plan Buildout: 0.00%

Reference Document:

Master Plan of Storm Drainage, March 2012, as amended by the change in the ENR Construction Cost Index since 03/2012.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, GC projects will be constructed as needed and as local DIF receipts are collected. All costs are at nominal, or current dollar value.

MFP 2021-2022 Update

Infrastructure: Storm Drainage Collection System Facilities

Project Title / Ref#: Share Of Common City Yard Improvements

SD -103

Submitting Departments: Engineering Department

Project Description:

Construct the following improvements: 1) Reconfigure some 60,000 square feet of a recently acquired warehouse and office space. 2) Pave approximately ten acres of currently dirt parking lot, primarily for the refuse operation refueling area. 3) Construct additional fleet maintenance operations bays. 4) Construct a new welding shop. 5) Increase security through additional fencing and lighting. 6) Construct additional CNG fueling stations and 7) reconfigure a recently acquired 24,000 square foot building into covered parking to maximize fleet lifetime. The combined improvements have a total projected cost of \$38.2 million and are spread between all City operations that make use of the City yard.

Justification / Consequences of Avoidance:

This amount represents the proportional amount of a total estimated \$38.2 million in structural improvements to the City maintenance yard necessary to meet the increasing demands for greater storm drainage collection system maintenance capacity. The City has acquired adequate land and has existing structural capacity for the various maintenance demands. This demand for additional structural capacity results from the doubling of all public infrastructure from the Ontario Ranch area and remaining portions of General City area.

Relationship to General Plan Development:

The project benefits both existing and future development within the General City and Ontario Ranch areas.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Master Plan of Storm Drainage, March 2012, as amended by the change in the ENR Construction Cost Index since 03/2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Storm Drainage Collection System Facilities

Project Title / Ref#: Ontario Ranch Storm Drain Design Studies

SD -105

Submitting Departments: Engineering Department

Project Description:

Recovery of costs incurred by the New Model Colony Construction group expended on behalf of all other developments. The Master Plan studies include: 1. Cucamonga Creek Drain Concept Development Studies and 2. Storm water Quality Management Guidance Plan. (Added 09/14, report reimbursements).

Justification / Consequences of Avoidance:

The studies were necessary to develop infrastructure requirements that define and benefit all development in the Ontario Ranch area.

Relationship to General Plan Development:

The project is related to the collection and removal of storm water from the Ontario Ranch area and is likely benefits all parcels within that area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Ontario Ranch (formerly NMC) Construction Agreement.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Water Source, Storage And Distribution System

Project Title / Ref#: Phillips Street 1010' Zone Well

WT -001

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

Construction of Well #39 and appurtenant piping for the Phillips Street Pressure zone.

Justification / Consequences of Avoidance:

The project is required to provide adequate well pumping capacity for future additional residents and businesses.

Relationship to General Plan Development:

The project 100% benefits new development in the General City area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Water Master Plan, August 2000

Project Timing:

While the project is 100.00% development related, the project's construction has been expedited by using Non-DIF receipts. The projects costs remain in the DIF calculation in order to reimburse those loans from other Fund's.

PROPOSED EXPENDITURES	FY 2022-23	FY 2023-24	FY 2024-25	FY 2025-26	G.P Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Water Source, Storage And Distribution System

Project Title / Ref#: Eighth Street 1212' Zone Wells

WT -002

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

Construction of wells #40, #42 and #43 to produce 2,500 GPM each and appurtenant piping for the Eighth Street Pressure zone. Contingency costs are included at 10% of the estimated construction cost. Administration, engineering and construction management are included at 15% of the combined construction/contingency cost

Justification / Consequences of Avoidance:

The project is required to provide adequate well pumping capacity for future additional residents and businesses.

Relationship to General Plan Development:

The project benefits new development in Ontario Ranch (42.09%) and the General City area (57.91%).

Allocation To General Plan Buildout: 100.00%

Reference Document:

Water Master Plan, April 2012.

Project Timing:

Well #40 was constructed in 2004; preliminary work and drilling of well #43 had been completed. remainder of project timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Project Title / Ref#: Phillips Street 1010' Zone Mains Extension

WT -009

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

Construct 67,000 linear feet of transmission and distribution mains from the reservoir at Milliken Avenue and I-10 to the Phillips Street Zone in Ontario Ranch. The project will consist of 8" to 24" water mains within the original and expanded 1010' Zone. Contingency costs are included at 10% of the estimated construction cost. Administration, engineering and construction management are included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

The project is required to provide adequate and timely water transmission for future additional residents and businesses.

Relationship to General Plan Development:

The project benefits new development and future water users in the Ontario Ranch area (83.56%), General City 6.79% and existing water users (9.65%).

Allocation To General Plan Buildout: 90.35%

Reference Document:

Water Master Plan, April 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Water Source, Storage And Distribution System
Project Title / Ref#: Decomission Galvin Treatment Plan/Abandon 1212-3 Reservoir
Submitting Departments: City Of Ontario Municipal Utilities Company

WT -025

Project Description:

Eliminate the unnecessary Galvin Treatment Plan and abandon the 1212-3 reservoir. Contingency costs are included at 10% of the estimated construction cost. Administration, engineering and construction management are included at 15% of the combined construction/contingency cost. For additional detail see Master Plan Projects 21 (S-12) and 43 (S-6).

Justification / Consequences of Avoidance:

The project is required for eliminating maintenance costs and liabilities for obsolete facilities.

Relationship to General Plan Development:

The project fully benefits existing water users.

Allocation To General Plan Buildout: 0.00%

Reference Document:

Water Master Plan, April 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Water Source, Storage And Distribution System

Project Title / Ref#: Water Master Plan Updates

WT -027

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

Update the City's Water Master Plan. An updated Master Plan is required to evaluate the changing conditions and the water sources and infrastructure needed to provide a potable and consistent amount of water to private and public property.

Justification / Consequences of Avoidance:

The project is required to maintain water system reliability and to provide timely water transmission for existing and future additional residents and businesses.

Relationship to General Plan Development:

The project is directly related to new development in both General City and Ontario Ranch areas based upon relative new water demands.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Water Master Plan, August 2000

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

PROPOSED EXPENDITURES	FY 2022-23	FY 2023-24	FY 2024-25	FY 2025-26	G.P. Build-Out	Total all Years

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Water Source, Storage And Distribution System
Project Title / Ref#: Water System Maintenance Vehicle/Equipment Fleet
Submitting Departments: City Of Ontario Municipal Utilities Company

WT -028

Project Description:

This project is the cost for the purchase of additional utility system maintenance vehicles and equipment.

Justification / Consequences of Avoidance:

The addition of tens of thousands of linear feet of water distribution lines, pumps and reservoirs will increase the demand upon the existing maintenance vehicle feet. Additional utility maintenance vehicles will be required.

Relationship to General Plan Development:

The additional vehicles are directly related to new development in both General City and Ontario Ranch areas based upon relative new water demands.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Based upon proportional analysis of existing fleet and equipment and future additional infrastructure.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Water Source, Storage And Distribution System

Project Title / Ref#: Water Source Supply

WT -034

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

The project consists of costs for securing additional water supply sources to meet the projected water demands anticipated at the build-out of the City's General Plan. Additional water supply sources include Chino Basin Desalter Authority (CDA), Recycled Water, Chino Basin Non-Agricultural Pool Rights (Non-Ag), and other sources to be determined which may include Chino Basin Safe Yield rights. Additional Ontario Ranch supplies include: 3,533 AFY from CDA Expansion (\$28,405,706); 11,486 AFY of Recycled Water (incl. in WT-016); 2,306 AFY of previously acquired Non-Ag rights (\$17,834,593); and 3,056 AFY of other water rights/supplies to be acquired (\$12,374,672). (continued under "Justification").

Justification / Consequences of Avoidance:

Additional OMC supplies include: 765 AFY of previously acquired San Antonio Water Co. shares (\$549,400); 512 AFY from the existing CDA (\$3,385,294); and 6,899 AFY of Recycled Water (incl. in WT-016).

The project is required to ensure sufficient water supplies are available to meet future demands.

Relationship to General Plan Development:

The combined project fully benefits new development within both the Ontario Ranch (93.71%) and General City areas (6.29%).

Allocation To General Plan Buildout: 100.00%

Reference Document:

Urban Water Management Plan, 2010, the Ontario Plan Environmental Impact Report.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Water Source, Storage And Distribution System
Project Title / Ref#: Share Of Common City Yard Improvements
Submitting Departments: City Of Ontario Municipal Utilities Company

WT -037

Project Description:

Construct the following improvements: 1) Reconfigure some 60,000 square feet of a recently acquired warehouse and office space. 2) Pave approximately ten acres of currently dirt parking lot, primarily for the refuse operation refueling area. 3) Construct additional fleet maintenance operations bays. 4) Construct a new welding shop. 5) Increase security through additional fencing and lighting. 6) Construct additional CNG fueling stations and 7) reconfigure a recently acquired 24,000 square foot building into covered parking to maximize fleet lifetime. The combined improvements have a total projected cost of \$38.2 million and are spread between all City operations that make use of the City yard.

Justification / Consequences of Avoidance:

This project represents the proportional amount of a total estimated \$38.2 million in structural improvements to the City maintenance yard necessary to meet the increasing demands for greater water system maintenance capacity. The City has acquired adequate land and has existing structural capacity for the various existing maintenance demands. This demand for additional structural capacity results from the doubling of all public infrastructure from the Ontario Ranch and remaining portions underbuilt portions of the General City.

Relationship to General Plan Development:

The project fully benefits future water users in the General City and Ontario Ranch areas.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Based upon an analysis of demands on City yard capacity and expansion needs.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Sewer Collection Facilities
Project Title / Ref#: Eastern Trunk Sewer
Submitting Departments: City Of Ontario Municipal Utilities Company

SW -001

Project Description:

The Eastern Trunk Sewer line consists of approximately 25,940 linear feet of sewer pipe ranging in size from 12" to 42" pipe. The line generally begins at the Turner Pump station and Riverside drive and travels west to Archibald Avenue where it turns south to Merrill Avenue. At Merrill Avenue, the line turns west to baker Avenue where it turns south to connect with the IEUA Kimball interceptor. The segment along Merrill Avenue requires that the line go under Cucamonga Creek. The project has been completed.

Justification / Consequences of Avoidance:

This project is necessary to be able to meet the sewage collection capacity demand that has been calculated as necessary resulting from proposed development in the General City and Ontario Ranch areas and existing sewage flows.

Relationship to General Plan Development:

The project is mostly (84.28%) related to existing flows and will be financed with utility rate receipts with the remaining 15.72% related to development within to the General City and Ontario Ranch areas.

Allocation To General Plan Buildout: 15.72%

Reference Document:

Old Model Colony and New Model Colony Sewer Master Plan, April 2012.

Project Timing:

While the project is 100.00% development related, the project's construction has been expedited by using Non-DIF receipts. The projects costs remain in the DIF calculation in order to reimburse those loans from other Fund's.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Sewer Collection Facilities
Project Title / Ref#: Western Trunk Sewer
Submitting Departments: City Of Ontario Municipal Utilities Company

SW -002

Project Description:

The project consists of approximately 32,800 linear feet of 18-inch to 36-inch" diameter sewer pipe. The Western Trunk Sewer is a gravity sewer that will extend from the intersection of Riverside drive and Carpenter Avenue4 to IEUA's Kimball interceptor. The general alignment of this trunk sewer begins at the intersection of Riverside drive and Carpenter Avenue; travels south in carpenter Avenue to Schafer Avenue; west to Walker Avenue; south to Merrill Avenue; west to Euclid Avenue; and south to the connection with IEUA's Kimball Interceptor at Kimball Avenue. Contingency costs are included at 10% of the estimated construction cost. Administration, engineering and construction management are included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

This project is necessary to be able to meet the sewage collection capacity demand that has been calculated as necessary resulting from proposed development in General City and Ontario Ranch areas and existing sewage flows.

Relationship to General Plan Development:

The project is related to existing flows and will be financed with utility rate receipts with the remaining related to development within Ontario Ranch.

Allocation To General Plan Buildout: 50.88%

Reference Document:

Old Model Colony and New Model Colony Sewer Master Plan, April 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Sewer Collection Facilities
Project Title / Ref#: Euclid Trunk Sewer
Submitting Departments: City Of Ontario Municipal Utilities Company

SW -011

Project Description:

The Euclid Avenue Trunk Sewer consists of 10,800 feet of 12-inch to 18-inch diameter pipe in Euclid Avenue, from Chino Avenue to Merrill Avenue. This project will tie into the Western Trunk Sewer at Merrill Avenue. Contingency costs are included at 10% of the estimated construction cost. Administration, engineering and construction management are included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

This project is necessary to be able to meet the sewage collection capacity demand that has been calculated as necessary resulting from proposed development in Ontario Ranch

Relationship to General Plan Development:

The project is fully related to development within Ontario Ranch.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Old Model Colony and New Model Colony Sewer Master Plan, April 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Sewer Collection Facilities
Project Title / Ref#: Plaza Serena Street, Granada Court To Vineyard Avenue
Submitting Departments: City Of Ontario Municipal Utilities Company

SW -015

Project Description:

Construct the sewer line starting from Plaza Serena, Granada Court to Vineyard Avenue (OS-12). Contingency costs are included at 15% of the estimated construction cost. Administration, engineering and construction management are included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

This project is necessary to be able to meet the sewage collection capacity demand that has been calculated as necessary resulting from proposed development in the General City area and existing sewage flows.

Relationship to General Plan Development:

The project is mostly largely related to existing flows and will be financed with utility rate receipts with the remaining new demand related to development within to the General City area.

Allocation To General Plan Buildout: 29.80%

Reference Document:

Old Model Colony and New Model Colony Sewer Master Plan, April 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Sewer Collection Facilities
Project Title / Ref#: Vineyard Avenue, South Of Cedar Et. Al.
Submitting Departments: City Of Ontario Municipal Utilities Company

SW -022

Project Description:

Construct numerous sewer lines including: Vineyard Avenue, south of Cedar Street (OS-21), Archibald, through the Airport (OS-25), Philadelphia and Hellman (OS-26), Inland empire Boulevard west of Archibald Avenue; and easement between Inland Empire Boulevard and Guasti Road (OS-22), Easement south of Guasti Road (OS-23) and Old Guasti Road west of Turner Avenue (OS-24). Contingency costs are included at 15% of the estimated construction cost. Administration, engineering and construction management are included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

This project is necessary to be able to meet the sewage collection capacity demand that has been calculated as necessary resulting from existing sewage flows in the General City Area.

Relationship to General Plan Development:

The project is largely related to development within the General City area with the minor amount remaining related to existing flows with that prortion financed with utility rate receipts.

Allocation To General Plan Buildout: 88.79%

Reference Document:

Old Model Colony and New Model Colony Sewer Master Plan, April 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Sewer Collection Facilities
Project Title / Ref#: Sewer Utility Maintenance Vehicles
Submitting Departments: City Of Ontario Municipal Utilities Company

SW -026

Project Description:

This project is the cost for the purchase of additional utility system maintenance vehicles and equipment.

Justification / Consequences of Avoidance:

The addition of tens of thousands of linear feet of sewer collection lines will increase the demand upon the existing utility system maintenance vehicle feet. Additional vectors and utility maintenance vehicles will be required.

Relationship to General Plan Development:

The additional vehicles are directly related to new development in both the General City and Ontario Ranch areas based upon the relative addition of new sewer demands.

Allocation To General Plan Buildout: 100.00%

Reference Document:

No specific document, based upon proportional inventory expansion.

Project Timing:

The timing of the capital acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Sewer Collection Facilities
Project Title / Ref#: Sewer Utility Master Plan
Submitting Departments: City Of Ontario Municipal Utilities Company

SW -027

Project Description:

Update the New Model Colony (now Ontario Ranch) Sewer Master Plan. An updated master Plan is required to evaluate the changing conditions and the sewer demands and infrastructure needed to provide adequate removal of sewage from private and public development.

Justification / Consequences of Avoidance:

Failure to maintain a Master Plan will limit the City's ability to properly plan for, prioritize and define all future sewer projects.

Relationship to General Plan Development:

The Master Plan is required to be able to continue to accommodate the additions of new development thus is attributed to new development.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Old Model Colony and New Model Colony Sewer Master Plan, April 2012.

Project Timing:

The timing of the Master Plan described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Sewer Collection Facilities
Project Title / Ref#: Carpenter Trunk Sewer
Submitting Departments: City Of Ontario Municipal Utilities Company

SW -029

Project Description:

The Carpenter Avenue Trunk Sewer consists of 15,350 feet of 12-inch to 21-inch diameter pipe in Carpenter Avenue, from Chino Avenue to the Eastern Trunk Sewer. Contingency costs are included at 10% of the estimated construction cost. Administration, engineering and construction management are included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

This project is necessary to be able to meet the sewage collection capacity demand that has been calculated as necessary resulting from projected sewage flows in the Ontario Ranch area.

Relationship to General Plan Development:

The project is 100% related to development within Ontario Ranch.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Old Model Colony and New Model Colony Sewer Master Plan, April 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Sewer Collection Facilities
Project Title / Ref#: Bon View Avenue N/O Francis
Submitting Departments: City Of Ontario Municipal Utilities Company

SW -043

Project Description:

Construct a sewer line along Bon view Avenue north of Francis Avenue (OS-19). Contingency costs are included at 15% of the estimated construction cost. Administration, engineering and construction management are included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

This project is necessary to be able to meet the sewage collection capthe General City area demand that has been calculated as necessary resulting from proposed development in the General City area and existing sewage flows.

Relationship to General Plan Development:

The project is largely related to development within the General City area with the remainder related to existing flows in the General City area to be financed with utility rate receipts.

Allocation To General Plan Buildout: 61.82%

Reference Document:

Old Model Colony and New Model Colony Sewer Master Plan, April 2012.

Project Timing:

While the project is 61.82% development related, some of the project's construction has been expedited by using Non-DIF receipts. The projects costs remain in the DIF calculation in order to reimburse those loans from other Fund's.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Sewer Collection Facilities
Project Title / Ref#: Holt Avenue Phase A
Submitting Departments: City Of Ontario Municipal Utilities Company

SW -046

Project Description:

Construction of sewer collection improvements near Holt Avenue. This is the remaining cost of the completed project.

Justification / Consequences of Avoidance:

This project is necessary to be able to meet the sewage collection capacity demand that has been calculated as necessary resulting from proposed development in the General City area and existing GC sewage flows. However, the project is largely needed to meet existing demand.

Relationship to General Plan Development:

The project is largely related to existing flows and will be financed with utility rate receipts with the remaining amount related to development within to the General City area.

Allocation To General Plan Buildout: 16.55%

Reference Document:

Old Model Colony and New Model Colony Sewer Master Plan, April 2012.

Project Timing:

While the project is 16.55% development related, some of the project's construction has been expedited by using Non-DIF receipts. The projects costs remain in the DIF calculation in order to reimburse those loans from other Fund's.

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Sewer Collection Facilities
Project Title / Ref#: Share Of Common City Yard Improvements
Submitting Departments: City Of Ontario Municipal Utilities Company

SW -048

Project Description:

Construct the following improvements: 1) Reconfigure some 60,000 square feet of a recently acquired warehouse and office space. 2) Pave approximately ten acres of currently dirt parking lot, primarily for the refuse operation refueling area. 3) Construct additional fleet maintenance operations bays. 4) Construct a new welding shop. 5) Increase security through additional fencing and lighting. 6) Construct additional CNG fueling stations and 7) reconfigure a recently acquired 24,000 square foot building into covered parking to maximize fleet lifetime. The combined improvements have a total projected cost of \$38.2 million and are spread between all City operations that make use of the City yard.

Justification / Consequences of Avoidance:

This amount represents the proportional amount of a total estimated \$38.2 million in structural improvements to the City maintenance yard necessary to meet the increasing demands for greater sewer collection system maintenance capacity. The City has acquired adequate land and has existing structural capacity for the various maintenance demands. This demand for additional structural capacity results from the doubling of all public infrastructure from the Ontario Ranch area and remaining portions of the General City area.

Relationship to General Plan Development:

The City yard improvements are directly related to new development.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Based upon an analysis of demands on City yard capacity and expansion needs.

Project Timing:

The timing of the capital acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

Infrastructure: Refuse Collection Vehicles, Containers And Facilities

Project Title / Ref#: Side Loader Collection Barrels

RC -001

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

The project consists of acquiring 39,308 side loader collection barrels (of all types, trash, green waste and recyclables). The additional barrels are required to meet the additional side loader refuse collection demands resulting from new residential detached dwelling development.

Justification / Consequences of Avoidance:

Refuse needs to be collected in a timely and efficient manner. Additions to the rolling stock and inventory of collection containers will be necessary as the net 80,149 additional residences, 546 commercial lodging units and 103,169,177 square feet of business square feet are added to the City.

Relationship to General Plan Development:

The vehicles, containers and additional facilities will be needed to meet the needs of new development. The existing inventory meets the needs of the existing community.

Allocation To General Plan Buildout: 100.00%

Reference Document:

No specific document, based upon proportional inventory expansion.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.

Master Facilities Plan Project Detail

Infrastructure: Refuse Collection Vehicles, Containers And Facilities

Project Title / Ref#: Roll-Off Boxes

RC -005

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

The project consists of acquiring approximately 222 new forty cubic yard roll-off boxes. The additional 40 cubic yard roll-off bins are required to meet of additional collection needs of new industrial/manufacturing resulting from new development.

Justification / Consequences of Avoidance:

Refuse needs to be collected in a timely and efficient manner. Additions to the rolling stock and inventory of collection containers will be necessary as the net 80,149 additional residences, 546 commercial lodging units and 103,169,177 square feet of business square feet are added to the City.

Relationship to General Plan Development:

The vehicles, containers and additional facilities will be needed to meet the needs of new development. The existing inventory meets the needs of the existing community.

Allocation To General Plan Buildout: 100.00%

Reference Document:

No specific document, based upon proportional inventory expansion.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

Infrastructure: Refuse Collection Vehicles, Containers And Facilities

Project Title / Ref#: Share Of Common City Yard Improvements

RC -007

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

Construct the following improvements: 1) Reconfigure some 60,000 square feet of a recently acquired warehouse and office space. 2) Pave approximately ten acres of currently dirt parking lot, primarily for the refuse operation refueling area. 3) Construct additional fleet maintenance operations bays. 4) Construct a new welding shop. 5) Increase security through additional fencing and lighting. 6) Construct additional CNG fueling stations and 7) reconfigure a recently acquired 24,000 square foot building into covered parking to maximize fleet lifetime. The combined improvements have a total projected cost of \$44.5 million and are spread between all City operations that make use of the City yard.

Justification / Consequences of Avoidance:

This amount represents the proportional amount of a total estimated \$44.5 million in structural improvements to the City maintenance yard necessary to meet the increasing demands for greater refuse collection system maintenance capacity. The City has acquired adequate land and has existing structural capacity for the various maintenance demands. This demand for additional structural capacity results from the doubling of all public infrastructures from the Ontario Ranch area and remaining portions of the General City area.

Relationship to General Plan Development:

The vehicles, containers and additional facilities will be needed to meet the needs of new development. The existing inventory meets the needs of the existing community.

Allocation To General Plan Buildout: 100.00%

Reference Document:

No specific document, based upon proportional inventory expansion.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

Infrastructure: Refuse Collection Vehicles, Containers And Facilities

Project Title / Ref#: Existing Fund Balance Purchases

RC -008

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

This impact fee fund has \$4,530,466 in existing fund balance waiting to be spent on any combination of additional containers and collection vehicles and more importantly, improvements to the City maintenance yard. The bulk of this fund balance will be dedicated too much needed City yard improvements.

Justification / Consequences of Avoidance:

The City Yard will fail to meet the needs of additional collection vehicles storage and repair capabilities/capacity.

Relationship to General Plan Development:

The vehicles, containers and additional facilities will be needed to meet the needs of new development. The existing inventory meets the needs of the existing community.

Allocation To General Plan Buildout: 100.00%

Reference Document:

No specific document, based upon proportional inventory expansion.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Page 410

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: General Facilities, Vehicles And Equipment

Project Title / Ref#: City Hall And Annex Reconfiguration

GF -001

Submitting Departments: Central Management

Project Description:

This project represents the cost (to date) of reconfiguring the City Hall and the City Hall Annex (former Police Station) into general office space. It also includes the future cost of completing the remaining reconfiguration of the Annex as it is not yet been completed. Some of the DIF proceeds will be used to complete the Emergency Operation Center.

Justification / Consequences of Avoidance:

As the City doubles in size, (population, businesses, residences, infrastructure, etc.) there will be a need for additional office space. The demand created by future development will benefit from the City having a building become available such as the former police facility but will need to contribute by constructing the reconfiguration. The reconfiguration provides a very inexpensive alternative to constructing additional office square footage.

Relationship to General Plan Development:

The additional space will be required over time as the City expands. The existing facilities are sufficient for the existing community. A small amount has been attributed to the existing community, but most of it, 80%, is required for accommodating the demands of new development.

Allocation To General Plan Buildout: 80.00%

Reference Document:

None.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column.

PROPOSED EXPENDITURES	FY 2022-23	FY 2023-24	FY 2024-25	FY 2025-26	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: General Facilities, Vehicles And Equipment

Project Title / Ref#: Expansion Of Administrative Pool Car Fleet

GF -002

Submitting Departments: Central Management

Project Description:

Expand the City Hall pool vehicle fleet. Vehicles would consist of standard sedans, small trucks and some four wheel drive vehicles.

Justification / Consequences of Avoidance:

The City will require additional unassigned pool cars as the City experiences additional demands for code enforcement, mail and supply, planning and engineering staff on-site inspections, and other required services.

Relationship to General Plan Development:

The vehicles would be additions to the existing fleet and thus is fully attributed to new development.

Allocation To General Plan Buildout: 100.00%

Reference Document:

None.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: General Facilities, Vehicles And Equipment

Project Title / Ref#: City Animal Holding Facility

GF -004

Submitting Departments: Central Management

Project Description:

The City has not indicated any plans for construction of an animal control facility. This project remains as a placeholder should the City determine that one should be built.

Justification / Consequences of Avoidance:

Animal management services are a municipal responsibility. The City currently contracts for services from the Inland Valley Humane Society. The City shares a shelter provided under the contract.

Relationship to General Plan Development:

The costs are split proportionally between the existing community and the future community based upon existing and additional residential units.

Allocation To General Plan Buildout: 0.00%

Reference Document:

None, staff projections.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column.

Page 417

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Library Facilities And Collection
Project Title / Ref#: Library Facilities Space Expansion
Submitting Departments: Community & Public Services Agency

LB -001

Project Description:

The project consists of the acquisition of land and construction of a total of 115,599 square feet of library space in one or more locations in order to maintain pace with new development-generated residential population growth. The expansion needs roughly relate to 33,063 square feet to new General City residents and some 82,356 square feet to service the anticipated Ontario Ranch new residents. Contingency costs are included as a normal part of the construction estimate at 10%. Project administration, consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs.

Justification / Consequences of Avoidance:

The proposed expansion will provide the square footage necessary to maintain the current ratio of floor space to residential patrons as is offered at this point in time. The current level of service standard is 0.460 square feet of space per City resident. Were no additional library space be added to the City, the standard would drop to 0.193 square feet per person at general Plan build-out.

Relationship to General Plan Development:

The Library Land Acquisition and Construction development impact fee schedule is necessary to accommodate new development and are intended to prevent the diminishment of library facilities availability to the existing community.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Based upon the City's Aesthetic, Cultural, Open Space and Recreation Resources GP Element.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, General City and Ontario Ranch projects will be constructed as needed and as DIF receipts are collected.

PROPOSED EXPENDITURES	FY 2022-23	FY 2023-24	FY 2024-25	FY 2025-26	G.P. Build-Out	Total all Years

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Library Facilities And Collection
Project Title / Ref#: Library Collection Expansion
Submitting Departments: Community & Public Services Agency

LB -002

Project Description:

This project consists of acquisition and processing of approximately 486,521 additional library collection items to increase the public library's collection in order to maintain pace with new residential home construction and occupancy. Collection items consist of books, books/movies on CDs, documents, and other long-term items. The City enjoys a standard of approximately 1.936 collection items per resident. The General City area will require approximately 139,152 collection items and Ontario Ranch area will require 347,369 collection items to maintain the current standard.

Justification / Consequences of Avoidance:

The proposed expansion will provide the collection additions necessary to maintain the current ratio of collection items to residential patrons as is offered at this point in time. The current level of service standard is 1.936 collection items per resident. Should the current collection not be expanded, the number of collection items per resident would drop to about 0.813 collection items per resident at General Plan build-out. The 486,521 additional collection items represents the amount necessary to maintain the current standard.

Relationship to General Plan Development:

The library collection item development impact fees are necessary to accommodate new development and are intended to prevent the diminishment of the library collection availability to the existing community.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Based upon the City's Aesthetic, Cultural, Open Space and Recreation Resources GP Element.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, General City and Ontario Ranch projects will be constructed as needed and as DIF receipts are collected.

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Public Use (Community Centers) Facilities
Project Title / Ref#: Public Use Community Center Space Expansion
Submitting Departments: Community & Public Services Agency

PF -001

Project Description:

Acquire land for and construct approximately 201,042 square feet community center for a broad range of public uses. The facilities would contain various rooms for classes, meetings, and sports activities. They may also have a "serving kitchen" and banquet facilities.

Justification / Consequences of Avoidance:

The City has a public use facilities community center standard of 0.800 square feet per resident based upon the existing 145,570 square feet of existing public use facilities divided by the 2021 State of California Department of Finance population estimate of 182,004. Failure to maintain that standard would force the City to continually reduce the level of services to its citizens. Should the City not construct any additional public use facilities, the standard of square foot space per resident would plummet to 0.336 square feet per resident. The Community & Services Agency would not be able to meet requests for space by instructors, groups and individual citizens.

Relationship to General Plan Development:

The Community Center land acquisition and development impact fees are necessary to accommodate new development and are intended to prevent the diminishment of public use facilities availability to the existing community.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Based upon the City's Aesthetic, Cultural, Open Space and Recreation Resources GP Element.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, General City and Ontario Ranch projects will be constructed as needed and as DIF receipts are collected. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Aquatics Facilities
Project Title / Ref#: Aquatics Centers - Pool Expansion
Submitting Departments: Community & Public Services Agency

AQ -001

Project Description:

One of the park amenities planned for inclusion within the Great Park is a public Aquatics Center. This amenity is to be located within the active sports area of the Great Park and serve the Ontario Ranch neighborhoods and the General City areas with a combo community center/aquatic center building programmed with full recreational activities. The aquatic center will serve as the local community plunge offering an Olympic sized pool to provide community aquatic opportunities for swim lessons, swim competition, recreational family swim and recreational exercise swimming. The current standards are 0.414 square feet of pool surface per resident and 0.026 square feet of support building per resident. The City would likely need to add non-impact fee to construct the size aquatics complex desired. The \$8.2 million represents the amount that can be financed with impact fee receipts.

Justification / Consequences of Avoidance:

The construction of additional pool surface square feet based upon the collection of impact fee receipts would merely maintain the existing standard of square foot of surface per resident. The existing pools would prove inadequate to meet the aquatics needs of the City's future residents, in particular, the Ontario Ranch area where there are no aquatics facilities.

Relationship to General Plan Development:

The aquatics DIFs are necessary to accommodate new development and are intended to prevent the diminishment of the availability to the existing community of the City's existing pool complexes.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Based upon the City's Aesthetic, Cultural, Open Space and Recreation Resources GP Element.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, Ontario Ranch projects will be constructed as needed and as DIF receipts are collected. All costs are at nominal, or current dollar value.

Page 427

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Park Land Acquisition And Park Infrastructure Development

Project Title / Ref#: Park Land Acquisition And Park Facilities Development

PK -001

Submitting Departments: Community & Public Services Agency

Project Description:

Acquire land for and develop approximately 753.9 acres of a combination of community/sports park acres designed to meet the community's youth/adult needs for both passive/programmed sports/activity uses. Improvements would include grading, irrigation, turf, sports infrastructure, playground climbing apparatus, drinking fountains, restrooms, group picnicking facilities, BBQs, benches, metered walking and bike paths and passive open green space. Contingency costs are included at 10% of the estimated construction cost. Administration, engineering and construction management are included at 15% of the combined construction/contingency cost. Neighborhood, or local, parks are added as a condition of approval consistent with the size of the proposed residential development.

Justification / Consequences of Avoidance:

The City currently enjoys a park standard of 2.59 acres per 1,000 residents based upon a 471.52 park acres and a 2021 California State Department of Finance population of 182,004. The Quimby Act allows the City to adopt a standard of 3.0 acres per 1,000 if the City is below that figure. In order for the City to maintain the 3.0 acres per 1,000 resident's standard, while potential adding the residents from some 80,149 additional residential dwellings, the City would need to add a combination of 754 acres of community and sports parks. There are no such specific plans for any particular combination of for the 754 acres of parks, beyond the conceptual Great Park plans, that could be financed from the DIF receipts.

Relationship to General Plan Development:

The park land acquisition and park facilities Development Impact Fees are necessary to accommodate new development and are intended to prevent the diminishment of park availability to the existing community.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Based upon the City's Aesthetic, Cultural, Open Space and Recreation Resources GP Element.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. All costs are at nominal, or current dollar value.

PROPOSED EXPENDITURES	FY 2022-23	FY 2023-24	FY 2024-25	FY 2025-26	G.P. Build-Out	Total all Years

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: Park Land Acquisition And Park Infrastructure Development

Project Title / Ref#: Share Of Common City Yard Improvements

PK -003

Submitting Departments: Community & Public Services Agency

Project Description:

Construct the following improvements: 1) Reconfigure some 60,000 square feet of a recently acquired warehouse and office space. 2) Pave approximately ten acres of currently dirt parking lot, primarily for the refuse operation refueling area. 3) Construct additional fleet maintenance operations bays. 4) Construct a new welding shop. 5) Increase security through additional fencing and lighting. 6) Construct additional CNG fueling stations and 7) reconfigure a recently acquired 24,000 square foot building into covered parking to maximize fleet lifetime. The combined improvements have a total projected cost of \$44.4 million and are spread between all City operations that make use of the City yard.

Justification / Consequences of Avoidance:

This amount represents the proportional amount of a total estimated \$44.5 million in structural improvements to the City maintenance yard necessary to meet the increasing demands for greater park system maintenance capacity. The City has acquired adequate land and has existing structural capacity for the various maintenance demands. This demand for additional structural capacity results from the doubling of all public infrastructure from the Ontario ranch area and remaining portions of the General City area.

Relationship to General Plan Development:

The project benefits future development within both the General City and Ontario Ranch areas.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Based upon the City's Aesthetic, Cultural, Open Space and Recreation Resources GP Element.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: FiberOptics System
Project Title / Ref#: HEAD END Facilities (Points Of Presence System)
Submitting Departments: Information Technology

FO -001

Project Description:

This project consists of the construction and installation of Point-of-Presence (POP) facilities and equipment that are categorized as Head End Facilities. The HEAD END facilities are a critical part of the Fiber Communications system. The Head End facilities will be located in several strategic locations, including City Hall, City Arena, and two separate locations within the Ontario Ranch area. These Head end facilities will provide the primary services hub for the delivery of services to the end-user. The Head End Facilities will provide a reliable FTTH System, through diversity and by leveraging a ring design, with redundant connections throughout System and multiple content feeds. This Project includes the installation of equipment in existing City facilities, including specialized power systems, fire suppression systems, back-up power systems and fiber optic distribution equipment. This Project also includes site development costs and pre-fabricated structure

Justification / Consequences of Avoidance:

The Project is a requirement for the provision of a Fiber Optics Communication system to serve the Ontario Ranch area. Multiple locations are required to provide redundancy and avoid service outages. 2021-22 Update: Project costs were recalculated based upon greater costing experience over previous estimates. An increase to the Ontario Ranch land use database also increased the project costs.

Relationship to General Plan Development:

The Project will primarily provide services to the new development in the Ontario Ranch area. A portion of the Project located within existing City facilities may also provide the potential to provide Fiber optic communications services to a limited area of the General City at some point in the future. All potential project costs related to future services to the General City have been removed from the estimated Project costs. The estimated Project costs are fully related to new development in the Ontario Ranch area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

None, staff projections.

Project Timing:

A Major portion of the project will need to be constructed and completed to enable the initiation of services to the Ontario Ranch area. The remainder of the Project may be constructed as the system expands and DIF receipts are collected. All costs are nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: FiberOptics System
Project Title / Ref#: Core Network - Planning/Installation - Equipment/Facilities
Submitting Departments: Information Technology

FO -002

Project Description:

This Project includes the planning services and pre-development services required for the design of an effective FTTH, including pre-design work with legal and specialized consulting services, preliminary review of available FTTH system alternatives. This Project also includes development of system standards and coordinating standards for conduit design within residential developments. In addition to the planning and pre-development services, this Project includes the acquisition and installation of the Core Network system. This includes the acquisition and installation of fiber optic cabling and fiber optic distribution systems between the Points-of-Presence locations in the existing City facilities and Ontario Ranch locations. The resulting Core Network system will distribute fiber optic services in a manner that will provide redundancy and service reliability.

Justification / Consequences of Avoidance:

The Project is needed to provide Fiber Optic system services to the Ontario Ranch area. 2021-22 Update: Project costs were recalculated based upon greater costing experience over previous estimates. An increase to the Ontario Ranch land use database also increased the project costs.

Relationship to General Plan Development:

The Project will primarily provide services to the new development in the Ontario Ranch area. Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: FiberOptics System
Project Title / Ref#: Distribution Network - Major Streets Conduit System
Submitting Departments: Information Technology

FO -004

Project Description:

This Project consists of the construction of the Fiber Optic Distribution Network in the major streets in the Ontario Ranch area and to connect the Fiber Optic system in the Ontario Ranch area to the locations in the existing City facilities. The Project will include the construction of approximately 359,400 linear feet of conduit to be constructed within the rights-of-way of the major streets in the Ontario Ranch area. Construction of this conduit will allow for the additional installation of fiber cabling to provide the Primary Ring, Secondary Ring, and Lateral portions of the Ontario Ranch Fiber Optics system. This conduit will also allow for the installation of the fiber cabling to provide the connections between the various Points-of-Presence facilities in the existing City facilities and the Ontario Ranch facility locations.

Justification / Consequences of Avoidance:

The Project is a requirement for the provision of a Fiber Optics Communication system to serve the Ontario Ranch area. The installation of conduit is required in all major streets to provide minimum system capabilities, including traffic signal timing coordination and other City utility functions in the Ontario Ranch area. 2021-22 Update: Project costs were recalculated based upon greater costing experience over previous estimates. An increase to the Ontario Ranch land use database also increased the project costs.

Relationship to General Plan Development:

The Project will provide services to the new development in the Ontario Ranch area only. The estimated Project costs are fully related to new development in the Ontario Ranch area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

None, staff projections.

Project Timing:

An initial portion of the project will be constructed to enable the initiation of services to the Ontario Ranch area. The remainder of the Project is anticipated to be constructed at the time the major streets are constructed and the system expands. All costs are nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: FiberOptics System
Project Title / Ref#: Cabling System - Residential/Non-Residential
Submitting Departments: Information Technology

FO -006

Project Description:

This Project consists of the design and construction of the fiber cabling and related distribution cabinets and equipment for the Fiber Optic System within neighborhood (in-tract) streets in the Ontario Ranch area. This in-tract fiber cabling will connect the Fiber Optic system to the facilities located within the major streets within the Ontario Ranch area. The Project will include the design and construction of the fiber cabling to be installed in the conduit installed by the individual developers within the rights-of-way of the neighborhood streets in the Ontario Ranch area. This Project will provide a Fiber Optics system in both residential neighborhoods and non-residential areas in the Ontario Ranch area.

Justification / Consequences of Avoidance:

The Project is a requirement for the provision of a Fiber Optics Communication system to serve the Ontario Ranch area. The installation of fiber cabling, cabinets and equipment is required in the in-tract streets to provide a Fiber Optics system in the Ontario Ranch area. 2021-22 Update: Project costs were recalculated based upon greater costing experience over previous estimates. An increase to the Ontario Ranch land use database also increased the project costs.

Relationship to General Plan Development:

The Project will provide services to the new development in the Ontario Ranch area only. The estimated Project costs are fully related to new development in the Ontario Ranch area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

None, staff projections.

Project Timing:

The project is anticipated to be constructed within individual development projects at time that local in-tract streets are constructed. It is anticipated that the individual developers will continue to be required to install conduit and related underground system needs and this Project will provide the related construction of the in-tract fiber systems. All costs are nominal, or current dollar value.

PROPOSED EXPENDITURES	FY 2022-23	FY 2023-24	FY 2024-25	FY 2025-26	G. P. Build-Out	Total all Years
1. Design / Engineering / Administratic	\$0	\$0	\$0	\$0	\$3,957,887	\$3,957,887
2. Land Acquisition / Right Of Way	\$0	\$0	\$0	\$0	\$0	\$0
3. Construction	\$0	\$0	\$0	\$0	\$14,392,315	\$14,392,315
4. Contingency	\$0	\$0	\$0	\$0	\$1,799,039	\$1,799,039
5. Equipment / Other	\$0	\$0	\$0	\$0	\$15,831,547	\$15,831,547
TOTAL COST:	\$0	\$0	\$0	\$0	\$35,980,788	\$35,980,788

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: FiberOptics System
Project Title / Ref#: Fiber Equipment Within Residential Units
Submitting Departments: Information Technology

FO -007

Project Description:

This Project will include the acquisition and installation of Fiber Optic System equipment for each residential unit in the Ontario Ranch area. This includes attached, detached residential units and commercial lodging units. The Network Interface Device (NID) equipment will be acquired and installed in approximately 45,900 residential units within the Ontario Ranch area. This Project will provide for the installation of a NID at each residential unit within the Ontario Ranch area. The Project will also provide for all required design for the placement of the NID equipment within various types of single and multi-family residential units.

Justification / Consequences of Avoidance:

The Project is a requirement for the provision of a Fiber Optics Communication system to serve residential units within the Ontario Ranch area. The installation of fiber equipment in each residential unit is required to provide a Fiber Optics system in the Ontario Ranch area. 2021-22 Update: Project costs were recalculated based upon greater costing experience over previous estimates. An increase to the Ontario Ranch land use database also increased the project costs.

Relationship to General Plan Development:

The Project is a requirement for the provision of a Fiber Optics Communication system to serve residential units within the Ontario Ranch Area. The installation of fiber cabling and equipment is required for each residential unit in the Ontario Ranch area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

None, staff projections.

Project Timing:

The project is anticipated to be constructed within individual development projects at time that non-residential buildings are constructed. All costs are nominal, or current dollar value.

PROPOSED EXPENDITURES	FY 2022-23	FY 2023-24	FY 2024-25	FY 2025-26	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	\$0	\$0	\$0	\$0	\$3,948,313	\$3,948,313
2. Land Acquisition / Right Of Way	\$0	\$0	\$0	\$0	\$0	\$0

Master Facilities Plan Project Detail

MFP 2021-2022 Update

Infrastructure: FiberOptics System
Project Title / Ref#: Fiber Equipment Within Non-Residential Areas
Submitting Departments: Information Technology

FO -008

Project Description:

This Project will include the acquisition and installation of Fiber Optic System equipment for each non-residential building in the Ontario Ranch area. The Project will provide the design and installation of network interface equipment in all non-residential units within the Ontario Ranch area. The Project includes the estimated acquisition and installation costs for the projected number of non-residential buildings in the Ontario Ranch area and the General Plan designated land-uses for those non-residential buildings.

Justification / Consequences of Avoidance:

The Project is a requirement for the provision of a Fiber Optics Communication system to serve non-residential buildings within the Ontario Ranch Aaea. The installation of fiber equipment in each non-residential building is required to provide a Fiber Optics system in the Ontario Ranch area. 2021-22 Update: Project costs were recalculated based upon greater costing experience over previous estimates. An increase to the Ontario Ranch land use database also increased the project costs.

Relationship to General Plan Development:

The Project is a requirement for the provision of a Fiber Optics Communication system to serve non-residential buildings within the Ontario Ranch area. The installation of fiber cabling and equipment is required for each non-residential building in the Ontario Ranch area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

None, staff projections.

Project Timing:

The project is anticipated to be constructed within an individual development project time frame.

PROPOSED EXPENDITURES	FY 2022-23	FY 2023-24	FY 2024-25	FY 2025-26	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	\$0	\$0	\$0	\$0	\$1,270,680	\$1,270,680

MFP 2021-2022 Update

Infrastructure: FiberOptics System
Project Title / Ref#: Share Of Specific/Common City Yard Improvments
Submitting Departments: Information Technology

FO -009

Project Description:

This project, in the future will include improvements to the City Yard for needed fiber-optic facilities. The project was put into abeyance until a full City Yard Master Plan can be completed.

Justification / Consequences of Avoidance:

Relationship to General Plan Development:

Allocation To General Plan Buildout: 0.00%

Reference Document:

Based upon an analysis of demands on City yard capacity and expansion needs.

Project Timing:
