CITY OF ONTARIO
DEVELOPMENT ADVISORY BOARD

AGENDA

September 18, 2023

▶ **All documents for public review are on file in the Planning Department located in City Hall at 303 East "B" St., Ontario, CA 91764 and on the city's website at ontarioca.gov/Agendas/DAB**

MEETING WILL BE HELD AT 1:30 PM IN ONTARIO CITY COUNCIL CHAMBERS LOCATED AT 303 East "B" St.

Scott Ochoa, City Manager
Scott Murphy, Executive Director, Community Development Agency
Jennifer McLain Hiramoto, Economic Development Director
James Caro, Building Official
Rudy Zeledon, Planning Director
Khoi Do, City Engineer
Chief Michael Lorenz, Police Department
Fire Marshal Paul Ehrman, Fire Department
Scott Burton, Utilities General Manager
Angela Magana, Community Improvement Manager

PUBLIC COMMENTS

Citizens wishing to address the Development Advisory Board on any matter that is not on the agenda may do so at this time. Please state your name and address clearly for the record and limit your remarks to five minutes.

Please note that while the Development Advisory Board values your comments, the members cannot respond nor take action until such time as the matter may appear on the forthcoming agenda.

AGENDA ITEMS

For each of the items listed below the public will be provided an opportunity to speak. After a staff report is provided, the chairperson will open the public hearing. At that time the applicant will be allowed five (5) minutes to make a presentation on the case. Members of the public will then be allowed five (5) minutes each to speak. The Development Advisory Board may ask the speakers questions relative to the case and the testimony provided. The question period will not count against your time limit. After all persons have spoken, the applicant will be allowed three minutes to summarize or rebut any public testimony. The chairperson will then close the public hearing portion of the hearing and deliberate the matter.

CONSENT CALENDAR ITEMS

A. MINUTES APPROVAL

Development Advisory Board Minutes of August 7, 2023, approved as written.

PUBLIC HEARING ITEMS

B. ENVIRONMENTAL ASSESSMENT, TENTATIVE PARCEL MAP, AND DEVELOPMENT PLAN REVIEW FOR FILE NOS. PMTT22-025 AND PDEV22-034: A public hearing to consider a Tentative Parcel Map 20559 (File No. PMTT22-025) to consolidate two existing parcels on site into one parcel and vacate a portion of Woodruff way to facilitate a Development Plan (File No. PDEV22-034) to raze approximately 161,320 square feet of commercial buildings and construct one 344,110 square-foot industrial building, on 16.65 acres of land generally located at the southeast corner of Rockefeller Avenue and Wanamaker Avenue, within the proposed Light Industrial Land Use Designation of the California Commerce Center Specific Plan. An Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364, which was certified by the City Council on August 16, 2022), was prepared. This application introduces no new significant environmental impacts. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan; (APNs: 0238-201-41 and 0238-221-22) **submitted by Link Logistics Real Estate Management LLC. Planning Commission action is required.**

1. **CEQA Determination**

   Motion to recommend Approval/Denial of an Addendum to a certified EIR

2. **File Nos. PMTT22-025 (TPM 20559) and PDEV22-034** Tentative Parcel Map and Development Plan

   Motion to recommend Approval/Denial

C. ENVIRONMENTAL ASSESSMENT AND DEVELOPMENT PLAN REVIEW FOR FILE NO. PDEV23-007: A hearing to consider a Development Plan to construct 144 multiple-family residential units on 9.18 gross acres of land located on the east side of Twinkle Avenue approximately 500 feet north of Moonlight Street, within Planning Area 3B (Medium Density Residential) of the Rich Haven Specific Plan. The environmental impacts of this project were previously reviewed in conjunction with the Rich Haven Specific Plan Amendment (File No. PSPA22-001), for which an Environmental Impact Report (State Clearinghouse No. 2022100425) was certified by the City Council on June 20, 2023. This application introduces no new significant environmental impacts. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan; (APNs: 0218-016-06, 0218-016-07, 0218-016-18, 0218-203-08, 0218-203-01, 0218-203-02, 0218-203-03, 0218-203-04,

0218-203-07, 0218-203-06, and 0218-203-05) **submitted by Landsea Homes. Planning Commission action is required.**

1. **CEQA Determination**

   No action necessary – use of previous EIR

2. **File No. PDEV23-007** (Development Plan)

   Motion to recommend Approval/Denial

If you wish to appeal a decision of the **Development Advisory Board**, you must do so within ten (10) days of the **Development Advisory Board** action. Please contact the **Planning Department** for information regarding the appeal process.

If you challenge any action of the **Development Advisory Board** in court, you may be limited to raising only those issues you or someone else raised at the public hearing described in this notice, or in written correspondence delivered to the **Development Advisory Board** at, or prior to, the public hearing.

The next **Development Advisory Board** meets on **October 2, 2023**.

I, Gwen Berendsen, Administrative Assistant of the City of Ontario, or my designee, hereby certify that a true, accurate copy of the foregoing agenda was posted on or before **September 14, 2023**, at least 72 hours prior to the meeting per Government Code Section 54954.2 at 303 East "B" Street, Ontario.

Gwen Berendsen
Administrative Assistant

CITY OF ONTARIO

Development Advisory Board

Minutes

August 7, 2023

BOARD MEMBERS PRESENT

Rudy Zeledon, Chairman, Planning Department
James Caro, Building Department
Anthony Vega, Community Improvement
Charity Hernandez, Economic Development Agency
Khoi Do, Engineering Department
Paul Ehrman, Fire Department
Christy Stevens, Municipal Utilities Company

BOARD MEMBERS ABSENT

Heather Lugo, Police Department

STAFF MEMBERS PRESENT

Angie Alvarez Cruz, Planning Department
Jeanie Aguilo, Planning Department
Elly Antuna, Planning Department
Kim Ruddins, Planning Department
Alexis Vaughn, Planning Department
Luis Batres, Planning Department
Robert Morales, Planning Department

PUBLIC COMMENTS

No person from the public wished to speak.

CONSENT CALENDAR ITEMS

A. **APPROVAL OF MINUTES:** Motion to approve the minutes of the July 17, 2023 meeting of the Development Advisory Board was made by Ms. Stevens; seconded by Mr. Ehrman; and approved unanimously by those present (7-0).

PUBLIC HEARING ITEMS

B. **ENVIRONMENTAL ASSESSMENT AND DEVELOPMENT PLAN REVIEW FOR FILE NO. PDEV21-041:** A hearing to consider a Development Plan to construct 362 multiple-family dwellings, consisting of 182 Motor Court homes and 180 Rowtown homes on 22.2 acres of land located at the southeast corner of Ontario Ranch Road and Archibald Avenue, within Planning Area 7 (PA-7) and Planning Area 8 (PA-8) of the Grand Park Specific Plan. The environmental impacts of this project were previously analyzed in the Grand Park Specific Plan (PSP12-001) Environmental Impact Report (State Clearinghouse No. 2012061057), certified by City Council on January 21, 2014. This application introduces no new significant environmental impacts. All previously adopted mitigation measures shall be a condition of project approval and are

incorporated herein by reference. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan (ALUCP). The project site is also located within the Airport Influence area of Chino Airport and is consistent with the policies and criteria set forth within the 2011 California Airport Land Use Planning Handbook published by the California Department of Transportation, Division of Aeronautics (APNs: 0218-241-51, 0218-241-52, 0218-241-53 and 0218-241-54); **submitted by Lennar Homes of California, Inc. Planning Commission action is required.**

Mr. Zeledon opened the public hearing.

Blaine Humbles, with Lennar Homes, was present.

Mr. Zeledon asked if he had reviewed all the Conditions of Approval and if he had any questions.

Mr. Humbles stated he had reviewed and was good with the Conditions of Approval as stated.

As there was no one wishing to speak on this item, Mr. Zeledon closed the public hearing.

Motion to approve **File No. PDEV21-041,** subject to the revised conditions, was made by Mr. Ehrman; seconded by Mr. Caro; and approved unanimously by those present (7-0).

C. **ENVIRONMENTAL ASSESSMENT, TENTATIVE TRACT MAP AND DEVELOPMENT PLAN REVIEW FOR FILE NOS. PMTT22-018 AND PDEV22-026:** A public hearing to consider: [1] Tentative Tract Map No. 20557 (File No. PMTT22-018) subdividing 3.9 acres of land into a single parcel for condominium purposes; and [2] a Development Plan (File No. PDEV22-026) for the construction of 70 multiple-family dwellings located at 2037 and 2055 South Fern Avenue, within the MDR-18 (Medium Density Residential—11.1 to 18.0 DUs/Acre) zoning district. The project is categorically exempt from the requirements of the California Environmental Quality Act (CEQA) pursuant to Section 15332 (Class 32, In-fill Development Projects) of the CEQA Guidelines. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan.; (APNs: 1050-591-01 and 1050-591-02) **submitted by Melia Homes. Planning Commission action is required.**

Mr. Zeledon opened the public hearing.

Ms. Antuna the project Planner stated there were revised conditions of approval before the members of the DAB.

Chad Brown, with Melia Homes, was present.

Mr. Zeledon asked if he had reviewed all the Conditions of Approval and if he had any questions.

Mr. Brown stated he had reviewed and was good with the Conditions of Approval as stated. One outstanding condition with regards to OMUC Exhibit B and the alternative coverage for the 12 foot wide sewer easement that runs on the south side of the project, in the private yards.

Ms. Stevens stated they are certainly willing to work with him.

Mr. Brown stated he would work with OMUC and Landscaping and would except the COA's as is.

Mr. Zeledon asked Mr. Brown if he received a revision copy to block wall and elimination to the disclosure on statement A2 and 3. We have time before Planning Commission for our landscape architect to work with Utilities to come up with an alternative coverage solution.

As there was no one wishing to speak on this item, Mr. Zeledon closed the public hearing.

Motion to recommend approval of **File Nos. PMTT22-018 and PDEV22-026,** subject to conditions, to the Planning Commission, was made by Mr. Vega; seconded by Ms. Hernandez; and approved unanimously by those present (7-0).

D. **ENVIRONMENTAL ASSESSMENT AND DEVELOPMENT PLAN REVIEW FOR FILE NO. PDEV22-027:** A public hearing to consider a Development Plan to construct 346 apartment units and 5,400 square feet of commercial space on 9.4 acres of land, located at the northwest corner of Euclid Avenue and Walnut Avenue, within the Mixed Use – Neighborhood Hub 8e – Euclid and Walnut (MU-NH 8e) zoning district. An Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364), which was certified by the City Council on August 16, 2022, was prepared. This application introduces no new significant environmental impacts. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan; (APNs: 1051-271-67, 1051-271-06, and 1051-271-66) **submitted by Legacy/Collier Residential LLC. Planning Commission action is required.**

Mr. Zeledon opened the public hearing.

Ms. Vaughn the project Planner, stated Public comments were received and there were some revisions before the members of the DAB.

Ben Mount, with Legacy Partners, the representative for the project, was present.

Mr. Zeledon asked if he had reviewed all the Conditions of Approval and if he had any questions.

Mr. Mount stated he had reviewed and was good with the Conditions of Approval, but had not yet received the revised COAs.

Mr. Do addressed removal of the CC&R's and if there are any other shared improvements other than just reciprocal access.

Mr. Mount discussed the reciprocal access and stated it is common ownership and would either be stated through a covenant or within the leases.

Mr. Khoi stated even though it is common ownership, it is two separate parcels, and Engineering would still like a document, either a covenant or any recorded document that goes with the land, in lieu of the CC&Rs.

Mr. Zeledon stated that he had a copy of the Mitchell Tsi's letter regarding the requirements for City to use local workforce and also comments of environmental quality act and the addendum.

Eddie Campos, a member of the Southwest Mountain States Regional Council of Carpenters spoke in opposition to the project.

As there was no one wishing to speak on this item, Mr. Zeledon closed the public hearing.

Mr. Zeledon stated the DAB is the recommending body and the final approval would be the responsibility of the Planning Commission.

Motion to recommend approval of **the Addendum and File No. PDEV22-027,** subject to conditions, to the Planning Commission, was made by Ms. Hernandez; seconded by Ms. Stevens; and approved unanimously by those present (7-0).

E. **ENVIRONMENTAL ASSESSMENT AND DEVELOPMENT PLAN REVIEW FOR FILE NO. PDEV22-050:** A hearing to consider a Development Plan to construct one industrial building totaling 167,174 square feet on 6.98 acres of land located at 1600 East Francis Street, within the General Industrial (IG) zoning district. An Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364), certified by the City Council on August 16, 2022, was prepared. This application introduces no new significant environmental impacts. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan (ALUCP); (APNs: 113-381-03, 113-381-04, 113-381-05 & 113-381-06) **submitted by DPIF3 CA 40 LC at 60 Freeway, LLC. Planning Commission action is required.**

Mr. Zeledon opened the public hearing.

Dane Palanjiam the representative for the project, was present and stated he had reviewed and accepted all the Conditions of Approval.

Mr. Zeledon asked if he had any questions or if the DAB had any questions.

Thomas Ruiz, a representative from Labors International Unions spoke in support of this project.

As there was no one wishing to speak on this item, Mr. Zeledon closed the public hearing.

Motion to recommend approval of **the Addendum and File No. PDEV22-050,** subject to conditions, to the Planning Commission, was made by Mr. Ehrman; seconded by Ms. Stevens; and approved unanimously by those present (7-0).

There being no further business, the meeting was adjourned to the next meeting on August 21, 2023.

Respectfully submitted,

Angie Alvarez Cruz
Recording Secretary

CITY OF ONTARIO PLANNING DEPARTMENT

DEVELOPMENT ADVISORY BOARD DECISION

September 18, 2023

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

DECISION NO.: [insert #]

FILE NOS.: PMTT22-025 (TPM 20559) and PDEV22-034

DESCRIPTION: A public hearing to consider the use of an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report ("Certified SEIR") for a Tentative Parcel Map 20559 (File No. PMTT22-025) to consolidate two existing parcels on site into one to facilitate a Development Plan (File No. PDEV22-034) to raze approximately 161,320 square feet of commercial buildings and construct one 344,110 square-foot industrial building, on 16.65 acres of land generally located at the southeast corner of Rockefeller Avenue and Wanamaker Avenue, within the proposed Light Industrial Land Use Designation of the California Commerce Center Specific Plan (APNs: 0238-201-41 and 0238-221-22; **submitted by Link Logistics Real Estate Management LLC.**

PART 1: BACKGROUND & ANALYSIS

LINK LOGISTICS REAL ESTATE MANAGEMENT LLC, (herein after referred to as "Applicant") has filed a request to consider the use of an Addendum to The Ontario Plan 2050 ("TOP 2050") Supplemental Environmental Impact Report ("Certified SEIR") for the approval of Tentative Parcel Map No. 20559, File No. PMTT22-025, and a Development Plan, File No. PDEV22-034, as described in the subject of this Decision (herein after referred to as "Application" or "Project"). The Project has been submitted in conjunction with an Amendment to the California Commerce Center Specific Plan (File No. PSPA22-006) to change the land use designation for the site from Commercial/Food/Hotel to Light Industrial consistent with The Ontario Plan Policy Plan land use designation of Industrial (0.55 FAR) and make graphic and textual modifications throughout to support the change (subject

Figure 1: Project Location

to recommendation by the Planning Commission to the City Council).

The Development Advisory Board is only tasked with making a recommendation to the Planning Commission on the Addendum and the Tentative Parcel Map and Development Plan applications.

PROJECT SETTING: The Project site is comprised of 16.65 acres of land generally located at the southeast corner of Rockefeller and Wanamaker Avenues, and is depicted in Figure 1: Project Location, above. Existing land uses, Policy Plan (general plan) and zoning designations, and specific plan land uses on and surrounding the Project site are as follows:

	Existing Land Use	***Policy Plan Land Use Designation***	***Zoning Designation***	***Specific Plan Land Use Designation***
Site:	Retail and Service – Car Dealership	Industrial (IND): 0.55 FAR	California Commerce Center Specific Plan	Light Industrial (Proposed)
North:	Industrial	Industrial (IND): 0.55 FAR	California Commerce Center Specific Plan	Light Industrial
South:	Commercial – Gas Station and Fast Food Drive-Thru	Industrial (IND): 0.55 FAR	California Commerce Center Specific Plan	Commercial / Food / Hotel
East:	Interstate-15 Freeway (I-15)	N/A	N/A	N/A
West:	Industrial	Industrial (IND): 0.55 FAR	California Commerce Center Specific Plan	Light Industrial

PROJECT DESCRIPTION:

The Project to be analyzed by the Development Advisory Board under the Addendum to TOP 2050 Subsequent Environmental Impact Report ("Certified SEIR") consists of a Tentative Tract Map application to consolidate two existing parcels into one and the future vacation of a portion of Woodruff Way, to facilitate a Development Plan to raze approximately 161,320 square feet of commercial buildings (Citrus Ford and Citrus Kia) and construct one 344,110 square-foot industrial building.

The Application is a project pursuant to the California Environmental Quality Act (Public Resources Code Section 21000 et seq.) ("CEQA") and an Initial Study/Addendum has been prepared to determine possible environmental impacts. Although the proposed Project could have a significant effect on the environment, because all potentially significant effects have been analyzed adequately in an earlier Certified EIR, and have been avoided or mitigated pursuant to that earlier Certified EIR, including revisions or mitigation measures that are imposed on the proposed Project, nothing further is required. The Project will introduce no new significant environmental impacts beyond those previously analyzed in the Certified EIR, and all mitigation measures previously adopted by the Certified EIR are a condition of project approval and are incorporated in the Addendum (see Attachment A—Addendum).

ENVIRONMENTAL REVIEW: An Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364, certified by the Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002) was filed for this Project. File No. PGPA20-002 established the underlying TOP 2050 (General Plan) Land Use Plan designation of Industrial (IND, 0.55 FAR) on the Project site. The related Specific Plan Amendment will bring the Project site into compliance with TOP 2050 Land Use Plan. The Addendum prepared for the Project does not preclude the imposition of any mitigation measures as laid forth in TOP 2050 SEIR and said mitigation measures are included by reference in the Project conditions of approval. The Addendum also included studies and assessments to support the findings that the Project will not have a significant environmental affect not already covered by TOP 2050 SEIR (see Appendices A through G.3 to Attachment A – Addendum). A summary of each study is as follows:

a) Air Quality and Greenhouse Gas Assessment (Appendix A) – The report analyzed existing air quality, air quality and greenhouse gas (GHG) emissions generated from Project-related sources, regional air pollution, and global climate change, as well as energy use resulting from implementation of the proposed Project and whether the Project would result in wasteful, inefficient, or unnecessary consumption of energy resources or confliction with any applicable plans for renewable energy and energy efficiency. The report also reviewed all TOP 2050 SEIR mitigation measures applicable to the proposed Project. The report concluded that the Project is not anticipated to result in a significant impact during construction or operational activities associated with air quality and GHG.

b) Cultural Records Search (Appendix B) – The cultural resources assessment analyzed the Prehistoric and Historic Periods of the Project site and performed an archaeological record search as well as review of the Sacred Lands Files (SLF) by the Native American Heritage Commission (NAHC). One resource, an historic railroad, has been recorded within a one-mile radius of the project site (not within the project boundaries). The NAHC SLF search did not indicate the presence of sacred sites or locations of religious or ceremonial importance within a one-mile radius of the project site.

c) Geotechnical Report (Appendix C.1) – The geotechnical investigation conducted database research, field work and lab sampling for the project site to determine whether construction was feasible on the Project site from a geotechnical standpoint. While geotechnical conditions exist that should be addressed prior to construction, including mitigations found in the California Building Code, remedial grading work, stormwater infiltration installation, and other recommendations based on empirical and analytical methods typical of the standard-of-practice in southern California, the Project site was found to be feasible for the proposed Project's scope of work.

d) Paleontological Assessment (Appendix C.2) – The paleontological resource assessment was completed to evaluate the Project site's potential to yield paleontological resources and included a review of paleontological literature and fossil locality records for previous projects in the area, a review of the underlying geology, and

recommendations to mitigate potential impacts to paleontological resources. The assessment found that there were no known fossil localities within the Project boundaries or near the Project; however, other discoveries had been made in locations one mile or greater from the Project site. A field visit was conducted and concluded that no paleontological resources, or evidence of paleontological resources, were observed during the survey.

TOP 2050 SEIR indicates the City is underlain by deposits of Quaternary and Upper-Pleistocene sediments deposited during the Pliocene and early Pleistocene time, Quaternary Older Alluvial sediments may contain significant, nonrenewable, paleontological resources and are, therefore, considered to have high sensitivity at depths of 10 feet or more below ground surface. In addition, TOP 2050 SEIR (Section 5.5) indicates that only one paleontological resource has been discovered in the City. The Project site has surficial sediments composed of younger Quaternary Alluvium, derived as alluvial fan deposits from the San Gabriel Mountains to the north or as dune sands. These deposits typically do not contain significant vertebrate fossils, at least in the uppermost layers, but they may be underlain by older sedimentary materials at estimated depths greater than 10 feet which could contain paleontological resources.

Project grading may exceed 10 feet in depth in some areas so the Project will implement TOP 2050 SEIR Mitigation Measure 5-2, as outlined in Section 5, Cultural Resources, as this measure addresses paleontological resources. The measure requires that, in the event unanticipated paleontological resources are identified during excavation, construction activities will not continue or will be moved to other parts of the Project site and a qualified paleontologist shall be contacted to determine the significance of these resources. If the find is determined to be significant, avoidance or other appropriate resource protection actions will be taken.

The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

e) Phase I Environmental Site Assessment ("ESA", Appendix D) – The ESA was completed in accordance with the American Society for Testing and Materials (ASTM) standards for the purposes of meeting certain landowner liability protections and identifying the potential presence of hazards on or near the Project site, including recognized environmental conditions ("RECs"), controlled recognized environmental conditions ("CRECs"), or historical recognized environmental conditions ("HRECs"). Identification of RECs, CRECs, and HRECs is important, as it aids in preventing exposure and guiding proper handling of any hazardous substances or petroleum products in, on or near a property. The study revealed no RECs in connection with the Project site. However, although not considered RECs, the study identified other "notable findings"—areas of contingent risk that are not clearly defined by the ASTM Standard, including past industrial/commercial operations at the site and past use of the site for agricultural orchards. While there is no readily available detailed information about the past industrial operations on-site, there is no indication that these operations were chemically intensive

or involved the use of significant amounts of petroleum products or other hazardous substances. Additionally, the site has operated as an auto dealer, including auto servicing, bodywork, paint booth, and carwash, since 1992. Historically, past orchard operations may have involved the application of arsenical and lead-based pesticides or other organic pesticides; however, the use of such substances in this region would have been widespread and ubiquitous. The study discouraged commercial use of the site, however, it found that the proposed industrial use would be appropriate and recommended additional conservative non-scope considerations (such as additional surveys prior to demolition and grading work). These conservative "De Minimis" conditions are those that do not represent a material risk of harm to public health or the environment and that generally would not be the subject of enforcement action if brought to the attention of appropriate governmental agencies, but provide additional certainty that accidental exposure to potentially-harmful conditions is reduced.

f) Preliminary Water Quality Management Plan ("PWQMP", Appendix E.1) – A PWQMP is a tool to improve the integration of required water quality elements, stormwater management, water conservation, rainwater harvesting and re-use, and flood management. PWQMPs are reviewed and conditioned on by the Environmental Engineering Division and the Engineering Department, and a Final WQMP shall be reviewed and approved by said staff prior to the issuance of construction permits. The project shall implement a variety of strategies to reduce any potential stormwater and water quality impacts.

g) Preliminary Hydrology Report (Appendix E.2) – The preliminary hydrology study was prepared as one of the components of the submittal application for a Tentative Parcel Map and examines drainage characteristic and patterns of the on-site watershed regarding distribution and management of storm water runoff. The study concluded that, through the construction of the proposed drainage system and a storm water quality maintenance program as well as other site improvements, flood protection is provided for 100-year storm events and the proposed Project will generate less storm water runoff than the existing condition. As further review is completed on the final grading, landscape, and street and utility improvement plans and additional requirements are made by the Environmental Engineering Division and the Engineering Department, the Applicant shall comply, prior to issuance of construction permits.

h) Noise Analysis (Appendix F) - A noise analysis was prepared to evaluate potential noise impacts, and any applicable reduction measures, associated with the proposed Project and in conjunction with TOP 2050 SEIR and the City's Municipal Code and Development Code requirements. The analysis focused on airport land use compatibility, sensitive receptors (land uses with greater sensitivity to noise, such as residential land uses), and operational and construction noise. The noise assessment concluded that the industrial land use was appropriate for the proximity to the airport, and that the operational noise levels associated with the Project will not exceed City exterior noise level standards at the nearest noise-sensitive receiver locations. While noise impacts would be both less than significant and less than that identified in TOP 2050 SEIR,

conservatively, implementation of the mitigation measures listed in TOP 2050 SEIR is included as a project condition of approval.

i) Trip Generation Memo (Appendix G.1) - A Trip Generation Analysis was prepared for the Project site to analyze the traffic generation forecast potential for the proposed demolition of an existing motor vehicle retail center and construction of an industrial development. The analysis found that the proposed Project would result in a lower trip generation forecast when compared to the existing/entitled land use (commercial). Therefore, the analysis concluded that the proposed Project can be expected to generate trips that would be within the trip budget originally approved for the Project site through TOP 2050 SEIR and would not create any new traffic impacts.

j) Vehicle Miles Traveled Report ("VMT", Appendix G.2) – VMT analyses are reviewed, approved, and conditioned by the Traffic Division and Engineering Department. As presented, the analysis concludes that the proposed Project's VMT analysis, using TOP 2050's model, was found to meet the Project Type screening criteria and thus is presumed to have a less than significant VMT impact when compared to both the existing land uses and the land uses assumed in TOP 2050 SEIR. The Project's estimated trips will not exceed the City's 110 net new daily vehicle trip threshold.

k) Focused Traffic Assessment (Appendix G.3) – A Focused Traffic Assessment was prepared to analyze peak hour level of service (LOS) operations at the intersection of Jurupa Street and Rockefeller Avenue to evaluate the effect of an additional westbound right turn traffic lane at the intersection due to the vacation and termination of the existing Woodruff Way. The assessment also analyzed whether a westbound dedicated right turn lane is needed at the intersection of Jurupa Street and Rockefeller Avenue to support the anticipated traffic volume or acceptable peak hour operations. The assessment concluded that the existing and future westbound right turn volume at the affected intersection is less than 300 vehicles per hour during peak hours, is anticipated to operate at an acceptable LOS with the existing lane geometrics, and that the intersection operations do not suggest that additional capacity (such as a right turn lane) is necessary to maintain acceptable peak hour operations.

PART 2: RECITALS

WHEREAS, The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) was certified on August 16, 2022, (hereinafter referred to as "Certified SEIR"), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario has prepared and approved for attachment to the Certified SEIR, an Addendum to the Certified SEIR (hereinafter referred to as "SEIR Addendum") in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the SEIR Addendum concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified SEIR, and that the Certified SEIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, pursuant to State CEQA Guidelines Section 15164(a), a lead agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary to a project, but the preparation of a subsequent or supplemental EIR is not required; and

WHEREAS, the City determined that none of the conditions requiring preparation of a subsequent or supplemental EIR would occur from the Project, and that preparation of an Addendum to the Certified EIR was appropriate; and

WHEREAS, the City of Ontario is the lead agency on the Project, and the Development Advisory Board (hereinafter referred to as "DAB") is the recommending authority for the requested approval to construct and otherwise undertake the Project; and

WHEREAS, the DAB has reviewed and considered the SEIR Addendum and related documents for the Project, and intends to take actions on the Project in compliance with CEQA, State and local guidelines implementing CEQA; and

WHEREAS, the SEIR Addendum and related documents are on file in the City of Ontario Planning Department, located at 303 East B Street, Ontario, CA 91764, and are available for inspection by any interested person at that location and are, by this reference, incorporated into this Resolution as if fully set forth herein; and

WHEREAS, City of Ontario Development Code Table 2.02-1 (Review Matrix) grants the DAB the responsibility and authority to review and make recommendation to the Planning Commission on the subject Application; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which the public notification of environmental actions shall be provided and hearing procedures to be followed, and all such notifications and procedures have been accomplished pursuant to Development Code requirements; and

WHEREAS, on September 18, 2023, the DAB of the City of Ontario conducted a hearing on the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the hearing and adoption of this Decision have occurred.

PART 3: THE DECISION

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED AND DECIDED by the Development Advisory Board of the City of Ontario as follows:

SECTION 1: Environmental Determination and Findings. As the recommending body for the Project, the DAB has reviewed and considered the information contained in the Addendum, the initial study, and the administrative record for the Project, including all written and oral evidence provided during the comment period. Based upon the facts and information contained in the Addendum, the initial study, and the administrative record, including all written and oral evidence presented to the DAB, the DAB finds as follows:

(1) The environmental impacts of the Project were reviewed in conjunction with an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364, certified by the Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002); and

(2) The SEIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The SEIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the DAB; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the Project may result in significant environmental impacts.

SECTION 2: Subsequent or Supplemental Environmental Review Not Required. Based on the EIR Addendum, all related information presented to the DAB, and the specific findings set forth in Section 1, above, the DAB finds that the preparation of a subsequent or supplemental Certified SEIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified SEIR that will require major revisions to the Certified SEIR due to the involvement of new significant

environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified SEIR was prepared, that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified SEIR was certified/adopted, that shows any of the following:

(a) The Project will have one or more significant effects not discussed in the Certified SEIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified SEIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified SEIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: Housing Element Compliance. Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the recommending body for the Project, the DAB finds that based on the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the Project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the Project site is not one of the properties in the Housing Element Sites contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report.

SECTION 4: Airport Land Use Compatibility Plan ("ALUCP") Compliance. The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

On April 19, 2011, the City Council of the City of Ontario approved and adopted the ONT ALUCP, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future

airport activity. As the recommending body for the Project, the DAB has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the DAB, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP.

SECTION 5: Development Advisory Board Action. The DAB does hereby find that based upon the entire record of proceedings before it, and all information received, that there is no substantial evidence that the Project will constitute substantial changes to the Certified SEIR, and does hereby recommend the Planning Commission recommend that the City Council APPROVE the adoption of the SEIR Addendum to the Certified SEIR, included as Attachment 1 of this Decision.

SECTION 6: Indemnification. The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 7: Custodian of Records. The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario. The records are available for inspection by any interested person, upon request.

APPROVED AND ADOPTED this 18th day of September 2023.

Development Advisory Board

Attachment A—Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report

(SEIR Addendum follows this page)

Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report

CITY OF ONTARIO PLANNING DEPARTMENT

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

1. Project Title/File Nos.: File Nos.: PDEV22-034, PMTT22-025, PSPA22-006 – Woodruff Logistics Center

2. Lead Agency: City of Ontario-Planning Department, 303 East B Street, Ontario, CA 91764

3. Contact Person: Alexis Vaughn, Phone: (909) 395-2416, Email: avaughn@ontarioca.gov

4. Project Sponsor: B9 Wanamaker Owner LLC; 3401 Etiwanda Avenue, Jurupa Valley, CA 91752

5. Project Location: The Project site is located in southwestern San Bernardino County, within the City of Ontario. The City of Ontario is located approximately 40 miles from downtown Los Angeles, 20 miles from downtown San Bernardino, and 30 miles from Orange County. As illustrated on Figures 1, *Regional Location Map*, and 2, *Aerial Site Photograph*, below, the Project site is located at 1350 and 1375 Woodruff Way (APNs: 238-201-41 and 238-221-22). The Project site is bordered by East Jurupa Street to the south, industrial uses to the east, South Rockefeller Avenue to the west, and Wanamaker Avenue to the north. Regional access is provided via Interstate 15 (I-15) and State Route 60 (SR-60).

6. Policy Plan (General Plan) Designation: Industrial

7. Zoning Designation: Existing – Commercial/Food/Hotel and Light Industrial under the California Commerce Center Specific Plan (CCCSP); Proposed – Light Industrial under the CCCSP

8. Description of Project: The Project proposed the following entitlements:

    1. A Specific Plan Amendment (File No. PSPA22-006) to the California Commerce Center Specific Plan to change the land use designation of 8.4 acres of land from Commercial/Food/Hotel to Light Industrial;

    2. A Development Plan (File No. PDEV22-034) to construct 344,110 square foot industrial building on 16.65 acres within the Light Industrial land use designation of the California Commerce Center Specific Plan. The Project is located at 1350 and 1375 Woodruff Way (APN: 1050-491-11); and

    3. Tentative Parcel Map (PMTT22-025) to consolidate the existing parcels on site (APNs: 238-201-41 and 238-221-22) into one for development of the proposed building.

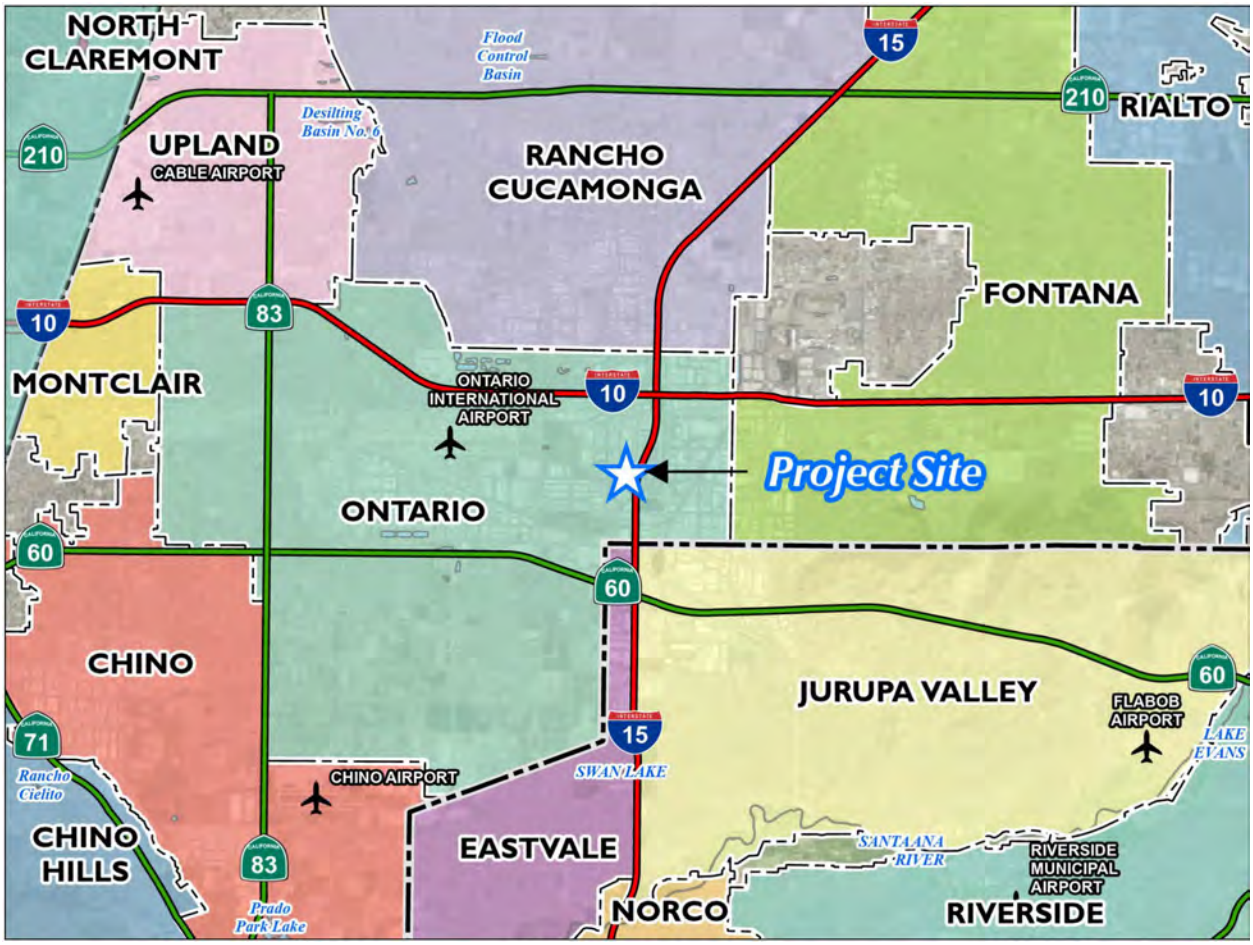

Figure 1: Regional Location Map

Figure 2: Aerial Site Photograph

Specific Plan Amendment (File No. PSPA22-06)
The California Commerce Specific Plan was adopted in January 1983. The Specific Plan is located on 1,416.5 acres of land generally located west of Haven Avenue, west of the Day Creek Channel and south of Southern Pacific Railroad. The proposed Specific Plan Amendment will include the following revisions to the Specific Plan:

- Any graphic that currently identifies the 8.4 acres of Commercial/Food/Hotel Commercial/Office, will be changed to Light Industrial and the Project's removal of/modifications to Woodruff Way; and

- Changes to Exhibit 17 – Land Use Plan to reflect the addition of 8.4 acres of Industrial.

Development Plan (File No. PDEV22-034)
The Project Applicant seeks to demolish the existing structures and re-develop the 16.15-acre site as a logistics center with approximately 344,110 square feet (s.f.) of building area as shown on Figure 3, *Site Plan*. Of the total building square footage, the Project would allocate 334,260 s.f. for warehousing/distribution and 10,000 s.f. for office uses. The Project would require demolition of the existing buildings and structures, associated on-site landscaping and parking.

Building Characteristics and Operations
As depicted in Figure 4, *Building Elevations*, the proposed building will be a one-story, 45.5-foot tall speculative warehouse/distribution and office facility, designed to be visually compatible with adjacent buildings and uses. The primary color scheme of the proposed building would include varying shades of white, grays, and dark grays and would be further accented with blue reflective glazing and decorative wood. The building is designed with 55 dock doors on the south-facing side of the building.

Although the ultimate end-user is unknown at this time, for purposes of conservative analysis, the Project is assumed to operate up to 24-hours daily, 7 days a week. Based on typical building user characteristics, it is reasonably assumed that up to 15% of the building space could be used for cold storage. Loading and unloading activities would occur at the southern portion of the building.

Circulation and Parking
Vehicular access will be provided via 5 driveways on Wanamaker Avenue, South Rockefeller Avenue, and Woodruff Way. The driveway on Woodruff Way would be restricted to truck only and the northern driveway on South Rockefeller Avenue and western driveway on Wanamaker Avenue would be restricted to passenger vehicles only. The Project also includes surface parking with ±183 parking spaces. Of the ±183 spaces, there are ±153 standard automobile parking stalls, 4 standard accessible parking stalls, 2 van accessible parking stalls, 1 van accessible electric vehicle (EV) parking stall, 1 standard EV parking stall, 18 standard EV parking stalls, and 4 clean air vehicle parking stalls. Passenger vehicle parking stalls would be located in parking areas positioned at the eastern, western, and northern side of the proposed building. Additionally, a bicycle rack would be provided at the northwestern and northeastern corners of the building near the office spaces. The Project would further include 64 truck trailer parking spaces located along the southern boundary of the Project site, closest to the 55 proposed dock doors. Additionally, the Project proposes to modify Woodruff Way to a cul-de-sac and it would no longer be connected to Wanamaker Avenue.

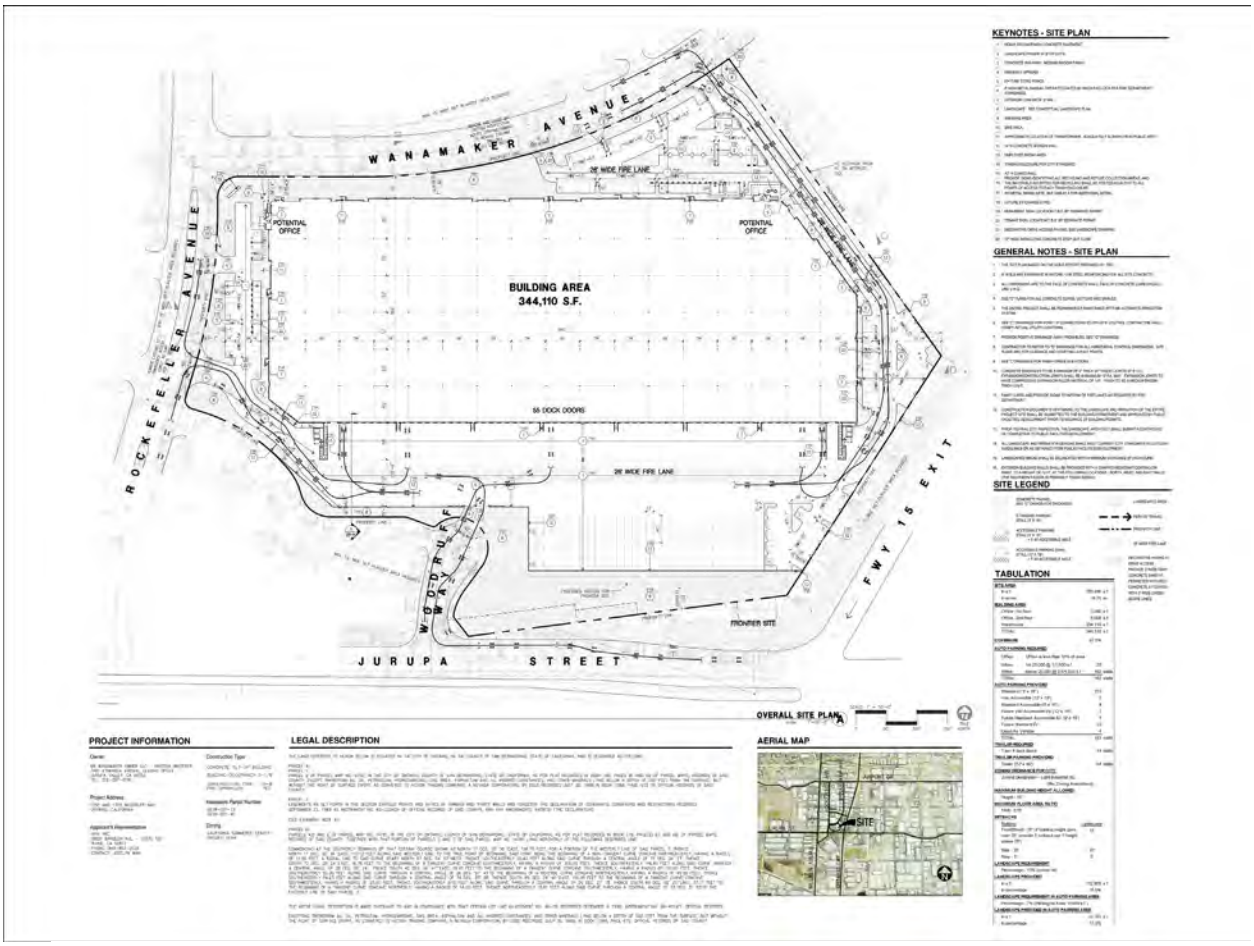

Figure 3: Site Plan

Figure 4: Building Elevations

Landscaping, Walls, and Lighting

As depicted in Figure 5, *Landscape Plan*, a variety of trees, shrubs, accent plants, and ground cover are proposed along the perimeter of the Project site and parking area. Landscaping will feature drought-tolerant plant materials for a total of 342 trees, including 32 15 gallon, 45 48" box, 167 36" box, 90 24" box trees, and 8 20' brown trunk height trees.

A 14-foot tall concrete tilt screen wall will border the Project site's southern boundary along the trailer parking spaces and truck yard, which will transition to an 8-foot tall metal manual sliding gate from the gate entry to the truck driveway access on Woodruff Way and 8-foot tall metal swing gates at the interior entry to the truck yard from both South Rockefeller Avenue and Wanamaker Avenue. Additionally, an 8-foot tall wrought iron tubular fence would border the Project's eastern boundary.

Exterior lighting would be installed on-site, as necessary, for safety, security, and wayfinding. Decorative architectural lighting as well as landscape lighting would also be installed to accent building entries as focal points throughout the site. Ornamental landscaping, lighting, walls, and utility infrastructure improvements/connections would be installed per compliance with the City's Municipal Code.

Infrastructure Improvements

Water service to the Project site will be provided by the Ontario Municipal Utilities Company (OMUC). As shown in Figure 6, *Conceptual Utilities Plan*, water would be accommodated via proposed water lines that would extend from the northeastern corner of the building to an existing 12-inch water main on Wanamaker Avenue. Additionally, a portion (from the Project's driveway on Woodruff Way to the proposed fire line along the northern side of the proposed building) of the existing 12-inch water main along Woodruff Way would be removed.

Sanitary sewer service to the Project site would be provided by Inland Empire Utilities Agency (IEUA). Sewer would be accommodated via proposed sewer lines that would extend from the northwestern and northeastern corners of the building to an existing 8-inch sewer main on Woodruff Way at the Project's driveway. Additionally, a portion of the existing 8-inch sewer main on Woodruff Way that runs through the proposed building would be removed.

A storm drain system would be installed in both east and west sides of the proposed building conveying the runoff southerly that ultimately drains to the existing 96-inch storm drain system located along East Jurupa Street. The westerly half of the site will drain from north to south via a proposed storm drain system that connects to an existing 27-inch storm drain downstream at Woodruff Way that ultimately discharge the existing storm drain system located along East Jurupa Street.

Runoff from the northeasterly area including the easterly half of the site will drain southwesterly to a series of catch basins and conveyed south via proposed storm drain line that connects to an existing 27-inch storm drain downstream south of the Project site. The northerly landscaped area adjacent to Wanamaker Avenue will sheet flow west to an existing street catch basin northwest of the site. The remaining westerly landscaped area adjacent to South Rockefeller Avenue will drain east to an existing street catch basin at the intersection northeast of East Jurupa Street and South Rockefeller Avenue.

Electricity will be provided by the Southern California Edison. Additionally, two fiber optic lines will be constructed: one from the western boundary of the Project site to the existing handhole at South Rockefeller Avenue with two handholes at the northern and southern ends and one along the northern boundary of the Project site to the with two handhole in the middle and at

the eastern end. All new dry utility infrastructure would be installed underground and within the Project site.

Project Construction Characteristics:
Project construction would occur in one phase and is expected to commence in August 2024 and would last through August 2025. Construction activities are as follows:

- Demolition
- Site Preparation & Grading
- Building Construction
- Paving
- Architectural Coating & Landscaping

The Project will require demolition of the existing buildings and asphalt paving on site. As depicted in Figure 7, *Conceptual Grading Plan*, the Project would not require import/export of soils.

Figure 5: Landscape Plan

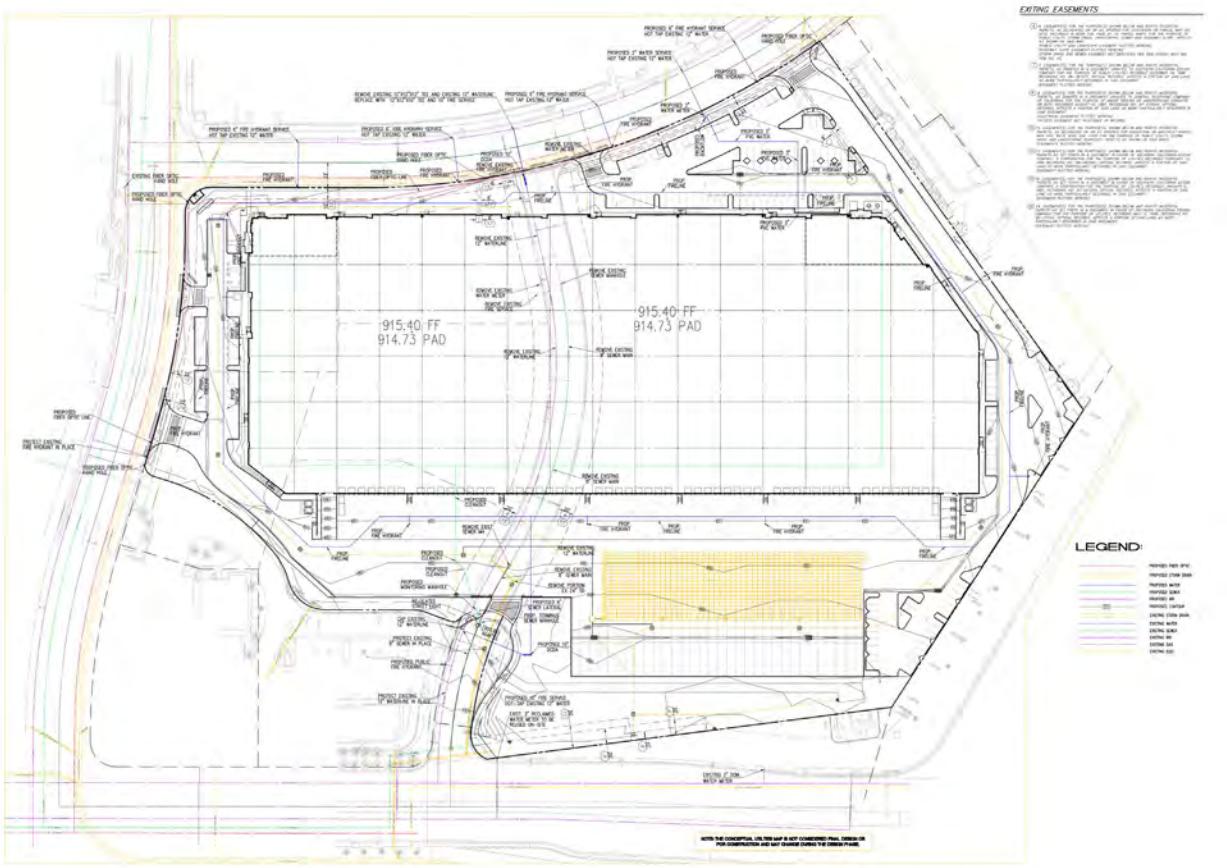

Figure 6: Conceptual Utilities Plan

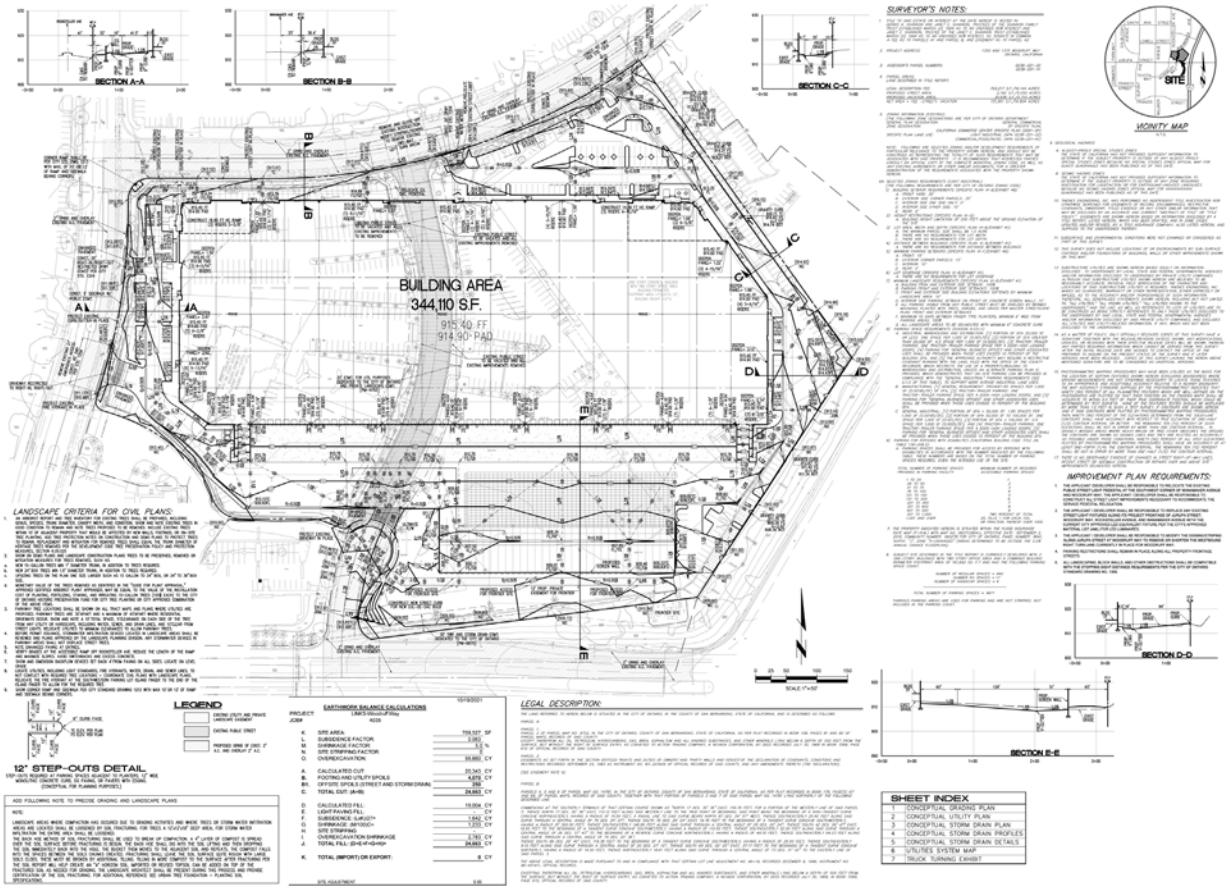

Figure 7: Conceptual Grading Plan

9. Project Setting: As shown in Figure 2, the Project site is currently developed with Citrus Motors Ford and Citrus Motors Kia auto dealership buildings, which are approximately 161,320 s.f. combined. Citrus Motors Kia is located in the eastern parcel and Citrus Motors Ford is located at the western parcel. The buildings house auto sale showrooms, auto serving, and auto body shop operations. Primary vehicular access to the Project site is via driveways along South Woodruff Way and South Rockefeller Avenue. Sidewalks are currently present only along the eastern side of South Woodruff Way.

   Background: On January 27, 2010, the Ontario City Council adopted The Ontario Plan ("TOP"). An Environmental Impact Report ("EIR") was prepared for TOP (State Clearinghouse No. 2008101140) and certified by the City Council on January 27, 2010 (hereinafter referred to as "Certified EIR"), which included Mitigation, Findings and a Statement of Overriding Considerations pursuant to the requirements of the California Environmental Quality Act, commencing with Public Resources Code Section 21000 ("CEQA"). Subsequently, on August 16, 2022, the Ontario City Council adopted The Ontario Plan 2050 ("TOP 2050"), an update to TOP. TOP 2050 serves as the framework for the City's business plan and provides a foundation for the City to operate as a municipal corporation that consists of six (6) distinct components: 1) Vision; 2) Governance Manual; 3) Policy Plan; 4) Council Priorities; 5) Implementation; and 6) Tracking and Feedback. The Policy Plan component of TOP 2050 meets the functional and legal mandate of a General Plan and contains nine elements: Land Use, Housing, Parks and Recreation, Environmental Resources, Community Economics, Safety, Mobility, Community Design and Social Resources.

   A Supplemental Environmental Impact Report ("SEIR") was prepared for TOP 2050 (State Clearinghouse No. 2021070364) and was certified by the City Council on August 16, 2022 (hereinafter referred to as "Certified SEIR"). The Certified SEIR analyzed the direct and physical changes in the environment that would be caused by TOP 2050; focusing on changes to land use associated with the buildout of the proposed land use plan compared to the TOP, and in the Policy Plan and impacts resultant of population and employment growth in the City.

   The Project site was analyzed in the Certified SEIR as Industrial to be consistent with the industrial uses surrounding the Project site. The significant unavoidable adverse impacts that were identified in Certified SEIR included air quality, cultural resources, noise, and transportation.

10. CEQA Requirements for an Addendum: If changes to a project or its circumstances occur or new information becomes available after adoption of a negative declaration, the lead agency may: (1) prepare a subsequent EIR if the criteria of State CEQA Guidelines Section 15162(a) are met, (2) prepare a subsequent negative declaration, (3) prepare an addendum, or (4) prepare no further documentation. (State CEQA Guidelines Section 15162(b)). When only minor technical changes or additions to the negative declaration are necessary and none of the conditions described in section 15162 calling for the preparation of a subsequent EIR or negative declaration have occurred, CEQA allows the lead agency to prepare and adopt an addendum. (State CEQA Guidelines Section 15164(b).)

    Under Section 15162, a subsequent EIR or negative declaration is required only when:

    1) Substantial changes are proposed in the project which will require major revisions of the previous negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;

2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the negative declaration due to the involvement of any new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the negative declaration was adopted, shows any of the following:

   a) The project will have one or more significant effects not discussed in the previous negative declaration;

   b) Significant effects previously examined will be substantially more severe than shown in the previous EIR;

   c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

   d) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

Thus, if the Project does not result in any of the circumstances listed in Section 15162 (i.e., no new or substantially greater significant impacts), the City may properly adopt an addendum to the Certified SEIR.

11. Analysis: According to the California Environmental Quality Act Guidelines Section 15164, an Addendum to a previously certified EIR may be used if some changes or additions are necessary, but none of the conditions described in Section 15162 requiring the preparation of a subsequent Negative Declaration or EIR have occurred. The CEQA Guidelines require that a brief explanation be provided to support the findings that no subsequent EIR or Negative Declaration are needed for further discretionary approval. These findings are described below:

    1) Required Finding: Substantial changes are not proposed for the project that will require major revisions of the previous EIR due to the involvement of new, significant environmental effects or a substantial increase in the severity of previously identified effects.

    Substantial changes are not proposed by the Project and Project implementation will not require revisions to the Certified SEIR. The Certified SEIR analyzed the direct and physical changes in the environment that would be caused by TOP 2050; focusing on changes to land use associated with the buildout of the proposed land use plan. The Project site is located within the Industrial land use designation of the TOP 2050. As discussed in the Certified SEIR, maximum development of the Project site (16.65 acres) would not exceed 398,901 s.f. of industrial uses based on a maximum FAR of 0.55 under the TOP 2050 land use plan. As discussed above, the Project proposes the development of an approximately 344,110 s.f. logistics center. The proposed building would be approximately 54,791 s.f. less than the maximum

allowed under TOP 2050. Therefore, the proposed Project will result in less development of the site than the Certified SEIR analyzed at buildout (i.e., 398,901 s.f. vs. 344,110 s.f.). Since the anticipated buildout resulting from the proposed project changes will be less than that originally analyzed in the Certified SEIR, no revisions to Certified SEIR are required. In addition, all previously adopted mitigation measures are a condition of project approval and are incorporated herein by reference. This Addendum provides an analysis of the Project and verification that the Project will not cause environmental impacts such that any of the circumstances identified in State CEQA Guidelines Section 15162 are present.

2) *Required Finding: Substantial changes have not occurred with respect to the circumstances under which the project is undertaken, that would require major revisions of the previous Environmental Impact Report due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.*

Substantial changes have not occurred with respect to the circumstances under which the project was undertaken, that would require major revisions to the Certified SEIR. The Project would be developed consistent with the Industrial land use designation of the site as the site was analyzed in the Certified SEIR. Therefore, no proposed changes or revisions to the Certified SEIR are required. In addition, all previously adopted mitigation measures are a condition of project approval and are incorporated herein by reference. This Addendum provides an analysis of the Project and verification that the Project will not cause environmental impacts such that any of the circumstances identified in State CEQA Guidelines Section 15162 are present.

3) *Required Finding. No new information has been provided that would indicate that the proposed project would result in one or more significant effects not discussed in the previous EIR.*

No new information has been provided that would indicate the proposed Project would result in any new significant effects not previously discussed in the Certified SEIR. The Certified SEIR analyzed the Project site as Industrial consistent with surrounding industrial properties to the north, east, and west. Therefore, no proposed changes or revisions to the Certified SEIR are required. In addition, all previously adopted mitigation measures are a condition of project approval and are incorporated herein by reference. This Addendum provides an analysis of the Project and verification that the Project will not cause environmental impacts such that any of the circumstances identified in State CEQA Guidelines Section 15162 are present.

12. Conclusion: The Certified SEIR, as certified by City Council on August 16, 2022, was prepared as a Program EIR in accordance with CEQA, the State CEQA Guidelines, and the City's Rules for the Implementation of CEQA and in accordance with Section 15121(a) of the State CEQA Guidelines (California Code of Regulations, Title 14, Division 6, Chapter 3). The Certified SEIR considered the direct physical changes and reasonably foreseeable indirect physical changes in the environment that would be caused by TOP 2050. Consequently, the Certified SEIR focused on impacts from changes to land use associated with buildout of the City's land use plan, and impacts from the resulting population and employment growth in the City. The proposed Project coordinates with the existing uses of the properties and uses within the surrounding areas. As described on page 12, the amount

of development under the proposed Project will be less than the development analyzed in the Certified SEIR.

Accordingly, and based on the findings and information contained in the Certified SEIR, the analysis in this document, and CEQA statute and State CEQA Guidelines, including Sections 15164 and 15162, the Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary, nor is there a need for any additional mitigation measures.

13. Surrounding Land Uses:

	Existing Land Use	General Plan Designation	Zoning Designation	Specific Plan Land Use
Site:	Auto Dealership	Industrial (IND)	California Commerce Center Specific Plan	Commercial/Food/ Hotel; Light Industrial
North:	Warehouse/ Distribution Uses	IND	California Commerce Center Specific Plan	Rail Industrial
South:	Gas Station and fast-food restaurant with Toyota warehouse beyond East Jurupa Street	IND	Toyota Business Park Specific Plan	Commercial/Food/ Hotel; Warehouse/ Distribution
East:	Manufacturing/ Warehouses	IND	California Commerce Center Specific Plan	Light Industrial
West:	Converse and Nexen Tile Warehouse	IND	California Commerce Center Specific Plan	Light Industrial

14. Other public agencies whose approval is anticipated include (e.g., permits, financing approval or participation agreement):

- Santa Ana Regional Water Quality Control Board (Issuance of a National Pollutant Discharge Elimination System Permit; Issuance of a Construction General Permit);
- State Water Resources Control Board (Stormwater Pollution Prevention Plan);
- South Coast Air Quality Management District (Issuance of Air Quality permits to construct and operation, if necessary)

15. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1?

☒Yes ☐ No

If "yes", has consultation begun? ☐ Yes ☐ No ☒ Completed

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agriculture/Forestry Resources	☐ Air Quality
☐ Biological Resources	☐ Cultural Resources	☐ Geology / Soils
☐ Greenhouse Gas Emissions	☐ Hazards & Hazardous Materials	☐ Hydrology/Water Quality
☐ Land Use / Planning	☐ Mineral Resources	☐ Noise
☐ Population / Housing	☐ Public Services	☐ Recreation
☐ Transportation	☐ Utilities / Service Systems	☐ Mandatory Findings of Significance
☐ Tribal Cultural Resources	☐ Wildfire	☐ Energy

DETERMINATION (To be completed by the Lead Agency)

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☒ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

EVALUATION OF ENVIRONMENTAL IMPACTS

1. A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect is significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

4. "Negative Declaration: Less Than Significant with Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from the "Earlier Analyses" Section may be cross-referenced).

5. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or Negative Declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:
   a. Earlier Analyses Used. Identify and state where they are available for review.

   b. Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.

   c. Mitigation Measures. For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.

6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.

7. Supporting Information Sources. A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
8. This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.

9. The explanation of each issue should identify:

   a. The significance criteria or threshold, if any, used to evaluate each question; and

   b. The mitigation measure identified, if any, to reduce the impact to less than significance.

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*Impacts Previously Analyzed in TOP 2050 SEIR*
1. AESTHETICS. Except as provided in Public Resources Code section 21099, would the project:				
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☐	☒
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?)	☐	☐	☐	☒
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☐	☒
2. AGRICULTURE AND FOREST RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest protocols adopted by the California Air Resources Board. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*Impacts Previously Analyzed in TOP 2050 SEIR*
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	☒
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒
3. AIR QUALITY. Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☐	☒
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☐	☒
c) Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☐	☒
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☐	☒
4. BIOLOGICAL RESOURCES. Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*Impacts Previously Analyzed in TOP 2050 SEIR*
corridors, or impede the use of native wildlife nursery sites?				
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☐	☒
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒
5. CULTURAL RESOURCES. Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?	☐	☐	☐	☒
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?	☐	☐	☐	☒
c) Disturb any human remains, including those interred outside of dedicated cemeteries?	☐	☐	☐	☒
6. ENERGY. Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☐	☒
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☐	☒
7. GEOLOGY AND SOILS. Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☐	☒
ii) Strong seismic ground shaking?	☐	☐	☐	☒
iii) Seismic-related ground failure, including liquefaction?	☐	☐	☐	☒
iv) Landslides?	☐	☐	☐	☒
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☐	☒
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*Impacts Previously Analyzed in TOP 2050 SEIR*
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code, creating substantial direct or indirect risks to life or property?	☐	☐	☐	☒
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☐	☒
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☐	☐	☒
8. GREENHOUSE GAS EMISSIONS. Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☐	☒
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emission of greenhouse gases?	☐	☐	☐	☒
9. HAZARDS AND HAZARDOUS MATERIALS. Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☐	☒
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☐	☒
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☐	☒
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☐	☒
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	☒
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	☐	☐	☐	☒
10. HYDROLOGY AND WATER QUALITY. Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*Impacts Previously Analyzed in TOP 2050 SEIR*
degrade surface or ground water quality?				
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☐	☒
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i) Result in substantial erosion or siltation on- or off-site;	☐	☐	☐	☒
ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;	☐	☐	☐	☒
iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☐	☒
d) Impede or redirect flood flows?	☐	☐	☐	☒
e) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☐	☒
f) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☐	☒
11. LAND USE AND PLANNING. Would the project:				
a) Physically divide an established community?	☐	☐	☐	☒
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☐	☒
12. MINERAL RESOURCES. Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒
13. NOISE. Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☐	☒
b) Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*Impacts Previously Analyzed in TOP 2050 SEIR*
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒
14. POPULATION AND HOUSING. Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?	☐	☐	☐	☒
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒
15. PUBLIC SERVICES. Would the project:				
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
i) Fire protection?	☐	☐	☐	☒
ii) Police protection?	☐	☐	☐	☒
iii) Schools?	☐	☐	☐	☒
iv) Parks?	☐	☐	☐	☒
v) Other public facilities?	☐	☐	☐	☒
16. RECREATION.				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☐	☒
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which have an adverse physical effect on the environment?	☐	☐	☐	☒
17. TRANSPORTATION. Would the project:				
a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☐	☐	☐	☒
b) Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*Impacts Previously Analyzed in TOP 2050 SEIR*
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☐	☒
d) Result in inadequate emergency access?	☐	☐	☐	☒
18. TRIBAL CULTURAL RESOURCES. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	☐	☐	☐	☒
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☐	☐	☒
19. UTILITIES AND SERVICE SYSTEMS. Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☐	☒
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	☐	☐	☐	☒
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☐	☒
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☐	☒
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☐	☒
20. WILDFIRE. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones,				

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*Impacts Previously Analyzed in TOP 2050 SEIR*
would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☐	☒
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☐	☒
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☐	☒
21. MANDATORY FINDINGS OF SIGNIFICANCE. (State CEQA Guidelines section 15065(a).)				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☐	☐	☒
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)	☐	☐	☐	☒
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☐	☐	☒

Note: Authority cited: Public Resources Code sections 21083, 21083.05, 21083.09.

EXPLANATION OF ISSUES

1. AESTHETICS. Would the project:

a. Have a substantial adverse effect on a scenic vista?

Summary of Certified SEIR Finding: The Certified SEIR concluded that increased development under TOP 2050 would occur within the City limits and already urbanized areas of the City. The scale and design of the City under TOP 2050 would not deter views of the San Gabriel Mountains. Therefore, impacts to scenic vistas would be less than significant and would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: TOP 2050 does not identify scenic vistas within the City. However, the Policy Plan (Policy CD-1.5) requires all major north-south streets be designed and developed to feature views of the San Gabriel Mountains. The Project site is located along South Rockefeller Avenue and is not identified as a major street in the Roadway Classification (Figure M-01) of the Mobility Element within the Policy Plan (City of Ontario, 2022a). Additionally, the Project site is surrounded by industrial uses and the Certified SEIR assumed buildout of the Project site as an industrial development. The type and character of development that would occur on the Project site is similar to what was anticipated by the Certified SEIR. Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings and historic buildings within a state scenic highway?

Summary of Certified SEIR Finding: The Certified SEIR concluded that there are no State Scenic highways through or in the vicinity of the City. The closest designated State scenic highway is a portion of State Route 142 in Chino Hills, approximately five miles west of the Ontario city limit. Therefore, no impacts to scenic highways would occur and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The City of Ontario is served by three freeways: I-10, I-15, and SR-60. I-10 and SR-60 traverse the northern and central portion of the City, respectively, in an east–west direction. I-15 traverses the northeastern portion of the City in a north–south direction. These segments of I-10, I-15, and SR-60 are not designated as scenic highways by the California Department of Transportation. The nearest eligible State scenic highway is SR-142, approximately 11.25 miles to the southwest of the Project site (Caltrans, 2022). In addition, there are no historically significant buildings or any scenic resources identified on or in the vicinity of the Project site. Therefore, the Project would not substantially damage scenic resources, including, but not limited to, trees, rock outcroppings and historic buildings within a state scenic highway. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

c. In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project

conflict with applicable zoning and other regulations governing scenic quality?)

Summary of Certified SEIR Finding: The Certified SEIR concluded that TOP 2050 includes goals and policies to ensure that new development would be compatible with the existing community and would be of quality design. Additionally, future development would still be required to adhere to the City's Development Code, which is intended to improve consistency with existing regulations and conditions. Therefore, TOP 2050 would not have a significant impact with respect to being inconsistent with policies or regulations governing scenic quality and would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: Project-related changes to local visual character would be less than significant during near-term construction activities because construction activity is common in the City, would be temporary in nature, and would not substantially degrade the visual character of the area. The Project site is zoned Light Industrial and Commercial/Food/Hotel under the California Commerce Specific Plan (CCCSP) and the Project would require a Specific Plan Amendment to the CCCSP to change the land use designation of 8.4 acres of land from Commercial/Food/Hotel to Light Industrial. Design standards applicable to the Light Industrial zone under the CCCSP would remain the same under the Project and the Project is required to comply with the development standards established in the CCCSP. As part of the development review process, City staff conducted a thorough review of the Project's design and determined that the Project would be consistent with the Light Industrial development standards and design guidelines from the CCCSP. Accordingly, there are no components of the Project that would degrade the existing visual character or quality of the site and surroundings beyond what was evaluated and disclosed in the Certified SEIR. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

d. Create a new source of substantial light or glare that would adversely affect day or nighttime views in the area?

Summary of Certified SEIR Finding: The Certified SEIR concluded that TOP 2050 would result in additional sources of light and glare; however, adherence to the design standards of the City of Ontario Development Code would ensure that light and glare from new developments would be minimized and that significant impacts would not occur. Therefore, impacts to light and glare would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: Under existing conditions, the Project site is primarily surrounded by industrial uses. Street lights are located along South Rockefeller Avenue, Wanamaker Avenue, South Woodruff Way, and East Jurupa Street. New lighting will be introduced to the site with the redevelopment of the Project. Pursuant to the requirements of the City's Development Code, Project on-site lighting will be shielded, diffused or indirect, to avoid glare to pedestrians or motorists. In addition, lighting fixtures will be selected and located to confine the area of illumination to within the Project site and minimize light spillage.

Furthermore, consistent with the findings of the Certified SEIR, site lighting plans will be subject to review by the Planning Department and Police Department prior to issuance of building permits (pursuant to the City's Building Security Ordinance). Therefore, implementation of the Project would not result in a significant source of light or glare that would adversely affect daytime or nighttime views. The Project would not result in any new, increased or substantially different

impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

2. AGRICULTURE AND FOREST RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:

a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the City of Ontario's land use plan no longer designates agricultural land uses in the City. Therefore, no impact on land zoned for the purpose of agricultural uses would occur and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site is presently occupied by two auto dealership buildings and does not contain any agricultural uses. Further, the site is identified as Urban and Built-up Land on the map prepared by the California Resources Agency, pursuant to the Farmland Mapping and Monitoring Program (DOC, 2018). The Project does not have the potential to convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland) to non-agricultural use. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Conflict with existing zoning for agricultural use, or a Williamson Act contract?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the City of Ontario's land use plan no longer designates agricultural land uses in the City. Buildout of TOP would have resulted in the cancellation or nonrenewal of Williamson Act contracts and TOP 2050 would not result in further impacts to Williamson Act lands. Therefore, impacts to Williamson Land Acts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site is not zoned for agricultural use. The Project site is zoned Specific Plan and would involve a Specific Plan Amendment to change the land use designation of 8.4 acres of land from Commercial/Food/Hotel to Light Industrial. The Project's proposed Specific Plan Amendment would not result in a loss of land zoned for agriculture. Furthermore, as concluded in the Certified SEIR, there is no Williamson Act contract in effect on the Project site. Therefore, no impacts to agricultural uses are anticipated, nor will there be any conflict with existing or Williamson Act contracts. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and

addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g)?

Summary of Certified SEIR Finding: The Certified SEIR concluded that there are no land use designations or zoning for forest land, timberland, or timberland zoned Timberland Production in the City of Ontario. Therefore, no impacts to forest land would occur and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site is not zoned for forest land or timberland. As concluded in the Certified SEIR, the City's Zoning Map does not designate any parcels of land in the Project area for forest land, timberland, or timberland zoned Timberland Production. Therefore, implementation of the Project would not conflict with, or cause the rezoning of, forest land or timberland. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

d. Result in the loss of forest land or conversion of forest land to non-forest use?

Summary of Certified SEIR Finding: The Certified SEIR concluded that there is no land in Ontario that would be considered forest land. Therefore, no impacts to the loss of forest land or conversion of forest land to non-forest use would occur and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: There is currently no land in the City of Ontario that qualifies as forest land as defined in Public Resources Code section 12220(g). Neither the Policy Plan nor the City's Zoning Code provide designations for forest land. Additionally, the Project site is presently occupied by two auto dealership buildings and does not contain forest land. Consequently, the Project would not result in the loss or conversion of forest land. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

e. Involve other changes in the existing environment, which, due to their location or nature, could individually or cumulatively result in loss of Farmland to non-agricultural use or conversion of forest land to non-forest use?

Summary of Certified SEIR Finding: The Certified SEIR concluded that TOP 2050 would not involve other changes in the existing environment, which, due to their location or nature, could result in conversion of Farmland to nonagricultural use or conversion of forest land to non-forest use, and impacts would be less than significant. Therefore, TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: As previously discussed above, the Project site does not include Farmland (defined as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance) or forest land and, therefore, the Project would not result in the conversion of Farmland to non-agricultural use of forest land to non-forest use. The Project would not result in any impacts to agricultural and/or forestry resources. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation Required: No additional mitigation required.

3. AIR QUALITY. Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations.

The analysis in this section is based on the Woodruff Logistics Air Quality & Greenhouse Gas Assessment prepared by Urban Crossroads, Inc. (Urban Crossroads) dated April 4, 2023. This report is provided in its entirety as Appendix A of this Addendum. At the time this Addendum was prepared, the Project's site plan consisted of a 344,678 s.f. warehouse building. The Project's site plan has been revised to reduce the overall building square footage to 344,110 s.f. The analysis conducted for the technical studies included as appendices to this EIR (including Air Quality, Energy, Greenhouse Gas Emissions, Noise, and Transportation) assumed the higher building square footage (344,678 s.f.) and, therefore, provides an overly conservative analysis of Project operations in this Addendum.

South Coast AQMD Regional and Local Significance Thresholds

The City of Ontario utilizes the South Coast AQMD CEQA Air Quality Handbook and thresholds of significance to determine the potential significance of Project emissions. A Project may have a significant impact if Project emissions would exceed these air pollution thresholds. Table 3-1, *South Coast AQMD Regional Threshold of Significance*, below identifies South Coast AQMD's regional construction and operational emissions within its jurisdiction.

Table 3-1 South Coast AQMD Regional Threshold of Significance

Pollutant	Construction Regional Thresholds	Operational Regional Thresholds
NO_X	100 lbs/day	55 lbs/day
VOC	75 lbs/day	55 lbs/day
PM_{10}	150 lbs/day	150 lbs/day
$PM_{2.5}$	55 lbs/day	55 lbs/day
SO_X	150 lbs/day	150 lbs/day
CO	550 lbs/day	550 lbs/day

Notes: lbs/day – Pounds Per Day, NO_X – Nitrogen Oxides, VOC – Volatile Organic Compounds, PM_{10} – Particulate Matter 10 microns in diameter or less, $PM_{2.5}$ – Particulate Matter 2.5 microns in diameter or less, SO_X – Sulfur Oxides, CO – Carbon Monoxide.
Source: (Urban Crossroads, 2023a, Table 1)

The South Coast AQMD also established localized significance thresholds (LSTs) that a project can emit without contributing to an existing or new air quality standard exceedance. LSTs are defined separately for construction and operational activities and are dependent on location, project size, and distance to sensitive receptors.

a. Conflict with or obstruct implementation of the applicable air quality plan?

Summary of Certified SEIR Finding: The Certified SEIR concluded that buildout of TOP 2050 would be consistent with the Air Quality Management Plan (AQMP) under the first criteria. However, air pollutant emissions associated with buildout of TOP 2050 would cumulatively contribute to the nonattainment designations in the South Coast Air Basin (SCAB). Incorporation of Mitigation Measures 3-2 and AQ-1 into future development projects for the operation phase would reduce criteria air pollutant emissions associated with buildout of TOP 2050. Additionally, goals and policies in TOP 2050 would promote increased capacity for alternative transportation modes. However, due to the magnitude of residential units that would be developed under TOP 2050 to accommodate the RHNA, no additional mitigation measures are available that would reduce impacts below South Coast AQMD thresholds. Therefore, impacts would remain significant and unavoidable.

Discussion of Effects: The Project site is located within the South Coast Air Basin (SCAB). Currently, State, and federal air quality standards are exceeded in most parts of the SCAB. In response, the South Coast AQMD has adopted a series of Air Quality Management Plans (AQMPs) to meet the State and federal ambient air quality standards. AQMPs are regularly updated to more effectively reduce emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy. In December 2022, the South Coast AQMD released the Final 2022 AQMP (2022 AQMP). The 2022 AQMP continues to evaluate current integrated strategies and control measures to meet the California Ambient Air Quality Standards (CAAQS), as well as explore new and innovative methods to reach its goals. Some of these approaches include utilizing incentive programs, recognizing existing co-benefit programs from other sectors, and developing a strategy with fair-share reductions at the federal, state, and local levels. Similar to the 2016 AQMP, the 2022 AQMP incorporates scientific and technological information and planning assumptions, including the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), a planning document that supports the integration of land use and transportation to help the region meet the federal CAA requirements. The Project's consistency with the AQMP will be determined using the 2022 AQMP, as discussed below. Criteria for determining consistency with the 2016 AQMP are defined in Chapter 12, Section 12.2, and Section 12.3 of the South Coast AQMD's CEQA Air Quality Handbook (1993). The Project's consistency with these criteria is discussed below.

Consistency Criterion No. 1: The Project will not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.

The violations that Consistency Criterion No. 1 refer to are the CAAQS and National Ambient Air Quality Standards (NAAQS). CAAQS and NAAQS violations could occur if regional or localized significance thresholds are exceeded. As evaluated under Air Quality Threshold b, below, the Project's regional and localized construction and operational-source emissions would not exceed applicable regional significance threshold or LST thresholds. As such, impacts would be less than significant.

Consistency Criterion No. 2: The Project will not exceed the assumptions in the AQMP based on the years of Project build-out phase.

The 2022 AQMP demonstrates that the applicable ambient air quality standards can be achieved within the timeframes required under federal law. Growth projections from local general plans adopted by cities in the district are provided to the Southern California Association of Governments (SCAG), which develops regional growth forecasts, which are then used to develop future air quality forecasts for the AQMP. Development consistent with the growth projections in TOP 2050 is considered to be consistent with the AQMP.

Peak day emissions generated by construction activities are largely independent of land use assignments, but rather are a function of development scope and maximum area of disturbance. Irrespective of the site's land use designation, development of the site to its maximum potential would likely occur, with disturbance of the entire site occurring during construction activities. As such, when considering that no emissions thresholds will be exceeded, a less than significant impact would result.

The TOP 2050 adopted by the City in August 2022, designates the Project site as "Industrial" land uses. The "Industrial" designation allows for a wide range of light industrial uses, including warehousing/distribution, assembly, light manufacturing, research and development, storage, repair facilities, and supporting retail and professional office uses. This designation also accommodates activities that could potentially generate impacts, such as noise, dust, and other nuisances. The Project includes the development of 344,110 s.f. industrial warehouse building, consistent with the current land use and zoning designation. As such, the proposed Project would not conflict with the goals and objectives of the AQMP.

AQMP Consistency Conclusion

The Project would not have the potential to result in or cause NAAQS or CAAQS violations. Additionally, Project construction and operational-source emissions would not exceed the regional or localized significance thresholds. The Project is therefore considered to be consistent with the AQMP. (Urban Crossroads, 2023a) Additionally, consistent with the findings of the Certified SEIR, the Project would be required to comply with Mitigation Measures 3-1, 3-2, and AQ-1 to reduce cumulative air pollutant emissions. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required. The following mitigation measure from the Certified SEIR is applicable to the Project:

MM 3-1 Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project construction-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology for assessing air quality impacts. If construction-related criteria air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, City of Ontario Building Department shall require feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and may include:

- Require fugitive dust control measures that exceed South Coast Air Quality Management District's Rule 403, such as:
    - Requiring use of nontoxic soil stabilizers to reduce wind erosion.
    - Applying water every four hours to active soil disturbing

activities.

- Tarping and/or maintaining a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials.

- Using construction equipment rated by the United States Environmental Protection Agency as having Tier 4 interim or higher exhaust emission limits.

- Ensuring construction equipment is properly serviced and maintained to the manufacturer's standards.

- Limiting nonessential idling of construction equipment to no more than five consecutive minutes.

- Using Super-Compliant VOC paints for coating of architectural surfaces whenever possible. A list of Super-Compliant architectural coating manufactures can be found on the South Coast Air Quality Management District's website at: http://www.aqmd.gov/prdas/brochures/Super-Compliant_AIM.pdf.

These identified measures shall be incorporated into all appropriate construction documents (e.g., construction management plans) submitted to the City and shall be verified by the City's Planning Department.

MM 3-2 The City of Ontario shall evaluate new development proposals within the City and require all developments to include access or linkages to alternative modes of transportation, such as transit stops, bike paths, and/or pedestrian paths (e.g. sidewalks).

AQ-1 Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project operation-phase-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology in assessing air quality impacts. If operation-related air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario Planning Department shall require that applicants for new development projects incorporate mitigation measures to reduce air pollutant emissions during operational activities. The identified measures shall be included as part of the conditions of approval. Possible mitigation measures to reduce long-term emissions could include, but are not limited to the following:

- For site-specific development that requires refrigerated vehicles, the construction documents shall demonstrate an adequate number of electrical service connections at loading docks for plug-in of the anticipated number of refrigerated trailers to reduce idling time and emissions.

- Applicants for manufacturing and light industrial uses shall consider energy storage and combined heat and power in appropriate applications to optimize renewable energy generation systems and avoid peak energy use.

- Site-specific developments with truck delivery and loading areas and truck parking spaces shall include signage as a reminder to limit idling of vehicles while parked for loading/unloading in accordance with California Air Resources Board Rule 2845 (13 CCR Chapter 10 sec. 2485).

- Provide changing/shower facilities as specified in Section A5.106.4.3 of CALGreen (Nonresidential Voluntary Measures).

- Provide bicycle parking facilities per Section A4.106.9 of CALGreen (Residential Voluntary Measures).

- Provide preferential parking spaces for low-emitting, fuel-efficient, and carpool/van vehicles per Section A5.106.5.1 of CALGreen (Nonresidential Voluntary Measures).

- Provide facilities to support electric charging stations per Section A5.106.5.3 and Section A5.106.8.2 of CALGreen (Nonresidential Voluntary Measures; Residential Voluntary Measures).

- Applicant-provided appliances shall be Energy Star–certified appliances or appliances of equivalent energy efficiency (e.g., dishwashers, refrigerators, clothes washers, and dryers). Installation of Energy Star–certified or equivalent appliances shall be verified by the City during plan check.

MM 3-1 and AQ-1 have been met through preparation of Woodruff Logistics Air Quality & Greenhouse Gas Assessment prepared by Urban Crossroads, Inc. provided in Appendix A. No construction or operational-related impacts have been identified in the technical report.

b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Summary of Certified SEIR Finding: The Certified SEIR concluded that buildout in accordance with TOP 2050 would generate short-term emissions that would exceed South Coast AQMD's regional significance thresholds and cumulatively contribute to the nonattainment designations of the SCAB. Mitigation Measure 3-1 and the goals and policies of TOP 2050 would reduce construction-related air pollutant emissions to the extent feasible. Therefore, construction related regional air quality impacts of developments that would be accommodated by TOP 2050 would remain significant and unavoidable.

Buildout in accordance with TOP 2050 would generate long-term emissions that would exceed South Coast AQMD's regional significance thresholds and cumulatively contribute to the nonattainment designations of the SCAB. Mitigation Measure 3-2 and AQ-1, in addition to the goals and policies of TOP 2050, would reduce air pollutant emissions to the extent feasible. The measures and policies covering topics such as expansion of the pedestrian and bicycle networks, promotion of public and active transit, and support to increase building energy efficiency and

energy conservation would also reduce criteria air pollutants within the City. However, impacts would remain significant and unavoidable due to the increase in volatile organic compounds (VOCs) from residential development associated with TOP 2050 compared to that of the TOP.

Discussion of Effects: As discussed above, the Project proposes a development of an approximately 344,110 s.f. logistics center. The proposed building would be approximately 54,791 s.f. less than the maximum allowed under TOP 2050. Therefore, the Project will result in less development of the site than the Certified SEIR analyzed at buildout (i.e., 398,901 s.f. vs. 344,110 s.f.). The Project Applicant would redevelop the Project site with a land use that was planned by the TOP 2050 and evaluated in the Certified SEIR; therefore, the Project would not generate air pollutant emissions that were not already anticipated by the Certified SEIR. Notwithstanding, an Air Quality Assessment (Appendix A) was prepared to quantify air pollutant emission associated with the implementation of the Project. Accordingly, the Project's daily regional emissions from construction have been estimated using South Coast AQMD's CalEEMod 2022.1 model, as shown in Table 3-2, *Regional Threshold Summary of Construction*. As shown in Table 3-2, Project construction-source emissions would not exceed the regional numerical thresholds of significance established by the South Coast AQMD for any criteria pollutant and impacts would be less than significant. Therefore, the Project's construction emission impacts would be less than significant.

Table 3-2 Regional Threshold Summary of Construction

Year	Emissions (lbs/day)					
	VOC	**NO_X**	**CO**	**SO_X**	**PM_{10}**	**$PM_{2.5}$**
Summer						
2024	3.74	36.10	34.40	0.06	6.80	4.22
2025	60.20	22.30	41.20	0.05	2.84	1.49
Winter						
2024	3.62	34.50	31.50	0.06	4.41	2.38

Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**	**NO**	**NO**

Source: (Urban Crossroads, 2023a, Table 3)

Emissions associated with the Project's operation were calculated using CalEEMod 2022.1. The Project's daily regional emissions from operation are shown in Table 3-3, *Summary of Peak Operational Emissions*. As shown in Table 3-5, the Project is anticipated to generate less emissions per day for pollutants of VOC, NO_X, CO, SO_X, and $PM_{2.5}$ as compared to emissions generated by the TOP 2050 adopted Industrial land use designation, and operational-source emissions would not exceed the applicable South Coast AQMD regional thresholds.

As shown in Tables 3-2 and 3-3, Project-related construction and operational activities would not exceed the South Coast AQMD significance threshold for any criterial pollutant. Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Table 3-3 Summary of Peak Operational Emissions

Source	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Summer						
Proposed Project	14.89	13.64	87.84	0.14	4.48	1.21
TOP 2050	22.07	20.24	190.90	0.36	11.13	2.39
Net Emissions (Proposed – TOP 2050)	**-7.18**	**-6.60**	**-103.06**	**-0.22**	**-6.65**	**-1.18**

Source: (Urban Crossroads, 2023a, Table 6)

Mitigation: No additional mitigation required. Mitigation Measures 3-1, 3-2, and AQ-1 would be applicable to the Project.

c. Expose sensitive receptors to substantial pollutant concentrations?

Summary of Certified SEIR Finding: Buildout of TOP 2050 could expose sensitive receptors to substantial concentrations of toxic air contaminants (TACs). Buildout could result in new sources of criteria air pollutant emissions and/or TACs near existing or planned sensitive receptors. Review of development projects by South Coast AQMD for permitted sources of air toxics (e.g., industrial facilities, dry cleaners, and gasoline dispensing facilities) would ensure that health risks are minimized. Policy ER-4.9 would ensure mobile sources of TACs not covered under South Coast AQMD permits are considered during subsequent project-level environmental review by the City of Ontario. Individual development projects would be required to achieve the incremental risk thresholds established by South Coast AQMD, and TACs would be less than significant. However, implementation of TOP 2050 would generate TACs that could contribute to elevated levels in the air basin due to the increase in industrial land use allowed under TOP 2050. While individual projects would achieve the project-level risk threshold of 10 per million, they would nonetheless contribute to the higher levels of cancer risk in the SCAB; and therefore, result in a cumulatively considerable impact. Therefore, impacts would remain significant and unavoidable.

Discussion of Effects: Some people are especially sensitive to air pollution. These groups of people include children, the elderly, individuals with pre-existing respiratory or cardiovascular illness, and athletes who engage in frequent exercise. Structures that house these persons or place where they gather to exercise are defined as sensitive receptors. All distances are measured from the Project site boundary to the outdoor living areas (e.g., backyards) or at the building façade, whichever is closer to the Project site. The receptor locations are shown in Figure 8, *Sensitive Receptors Locations*.

Figure 8: Sensitive Receptors Locations

The South Coast AQMD recommends that the nearest sensitive receptor be considered when determining the Project's potential to cause an individual or cumulatively significant impact. The nearest land use where an individual could remain for 24 hours to the Project site has been used to determine localized construction and operational air quality impacts for emissions of PM_{10} and $PM_{2.5}$ (since PM_{10} and $PM_{2.5}$ thresholds are based on a 24-hour averaging time). The nearest receptor used for evaluation of localized impacts of PM_{10} and $PM_{2.5}$ is location R5, represented by the Rodeway Inn Ontario Mills Mall at 4075 E Guasti Rd, approximately 5,587 feet (1,703 meters) northwest of the Project site. Consistent with LST Methodology, the nearest industrial/commercial use to the Project site is used to determine construction and operational LST air impacts for emissions of NO_X and CO as the averaging periods for these pollutants are shorter (8 hours or less) and it is reasonable to assume that an individual could be present at these sites for periods of one to 8 hours. The nearest receptor used for evaluation of localized impacts of NO_X and CO is location R4, represented by Ace Calendering Enterprises at 1311 Wanamaker Ave, adjacent east of the Project site.

Construction Emissions

Project-related construction localized emissions are presented in Table 3-4, *LST Summary of Construction*. As shown, the Project's construction emissions would not exceed South Coast AQMD's significance thresholds for localized air pollutant emissions during construction. Therefore, the nearby sensitive receptors would not be exposed to substantial pollutant concentrations that would present a public health concern and impacts would be less than significant.

Table 3-4 LST Summary of Construction

On-Site Emissions	Emissions (lbs/day)			
	NO_X	CO	PM_{10}	$PM_{2.5}$
Demolition				
Maximum Daily Emissions	24.90	21.70	6.47	1.80
South Coast AQMD Localized Threshold	118	869	990	578
Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**
Site Preparation				
Maximum Daily Emissions	36.00	32.90	7.26	4.16
South Coast AQMD Localized Threshold	220	1,721	794	639
Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**
Grading				
Maximum Daily Emissions	34.30	30.20	4.12	2.31
South Coast AQMD Localized Threshold	237	1,881	880	650
Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**

Source: (Urban Crossroads, 2023a, Table 9)

Operational Emissions

Project-related operational localized emissions are presented in Table 3-5, *Summary of Operations*. As shown, Project would not exceed the South Coast AQMD significance thresholds for localized air pollutant emissions during operation. Therefore, Project operation would expose

sensitive receptors near the Project site to less-than-significant localized criteria pollutant concentrations.

Table 3-5 LST Summary of Operations

On-Site Emissions	Emissions (lbs/day)			
	NO_X	CO	PM_{10}	$PM_{2.5}$
Maximum Daily Emissions	3.72	53.69	0.27	0.23
South Coast AQMD Localized Threshold	270	1,754	254	161
Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**

Source: (Urban Crossroads, 2023a, Table 10)

CO Hotspots

An adverse CO concentration, known as a "hotspot," would occur if an exceedance of the State one-hour standard of 20 parts per million (ppm) or the 8-hour standard of 9 ppm were to occur. It has long been recognized that CO hotspots are caused by vehicular emissions, primarily when idling at congested intersections. In response, vehicle emissions standards have become increasingly stringent in the last 20 years. Currently, the allowable CO emissions standard in California is a maximum of 3.4 grams/mile for passenger cars (there are requirements for certain vehicles that are more stringent). With the turnover of older vehicles, introduction of cleaner fuels, and implementation of increasingly sophisticated and efficient emissions control technologies, CO concentration in the SCAB is now designated as attainment.

Due to the relatively small size of the Project, the Project does not have the potential to generate the volume of traffic required to generate a CO "hotspot. Therefore, CO "hotspots" are not an environmental concern for the Project and no impacts would occur. (Urban Crossroads, 2023a)

Based on the foregoing analysis, the Project would not expose sensitive receptors near the Project site to significant pollutant concentrations during construction and operation. Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

d. Result in other emissions (such as those leading to odors adversely affecting a substantial number of people)?

Summary of Certified SEIR Finding: The Certified SEIR concluded that industrial uses would be generally limited to the areas designated Industrial and future environmental review would be required for these types of industrial projects, which would ensure that sensitive land uses are not exposed to objectionable odors. Both residential and nonresidential land uses would be required to comply with South Coast AQMD Rule 402. Therefore, impacts from potential odors generated from residential and other nonresidential land uses associated with TOP 2050 are considered less than significant. Moreover, any construction-related odor emissions would be temporary and intermittent. By the time such emissions reached any sensitive receptor sites, they would be diluted to well below any level of air quality concern. Therefore, impacts associated with construction-generated odors are considered less than significant.

Discussion of Effects: Land uses generally associated with odor complains include: agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting operations, refineries, landfills, dairies, and fiberglass molding facilities. The Project does not contain land uses typically associated with emitting objectionable odors. Potential odor sources associated with the Project may result from construction equipment exhaust and the application of concrete and architectural coatings during construction activities and the temporary storage of typical solid waste (refuse) associated with the Project's (long-term operational) uses. Standard construction requirements would minimize odor impacts from construction. The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction and is thus considered less than significant. It is expected that Project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with the City's solid waste regulations. The Project would also be required to comply with South Coast AQMD Rule 402 to prevent occurrences of public nuisances. Therefore, odors associated with the Project construction and operations would be less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

4. BIOLOGICAL RESOURCES. Would the project:

a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

Summary of Certified SEIR Finding: The Certified SEIR concluded that no sensitive plant species have been observed in Ontario, and the only such species that are considered potentially present in the City have a low potential due to lack of suitable habitat. Therefore, implementation of TOP 2050 would not have substantial adverse impacts on sensitive plant species. TOP 2050 includes policies to ensure that special-status species and habitat are protected through compliance with state and federal regulations (e.g., Policies ER-5.1 and ER-5.2). Projects under TOP 2050 that undergo independent CEQA review would be required to determine whether there is potential habitat on-site for sensitive species. Compliance with the requirements of the California and federal Endangered Species Acts, including requirements of the USFWS regarding critical habitat; mitigation fees paid by projects in Ontario Ranch; and acquisition and management of habitat using those fees would reduce impacts on sensitive animal species from implementation of TOP 2050. Therefore, TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site is currently developed with Citrus Motors Ford and Citrus Motors Kia auto dealership buildings. The Project site is in an urbanized and industrialized area in the City of Ontario and vegetation onsite is limited to ornamental species. The Project site is located within an area that has not been identified as containing species identified as a candidate, sensitive, or special status species in local or regional plans, policies or regulations or by the California Department of Fish and Game or the U.S. Fish and Wildlife Service. As a part of the Project, existing vegetation within the Project site would be removed and replaced with a variety of trees and ornamental vegetation. The replacement of on-site vegetation and trees would not have a substantial adverse effect on candidate, sensitive or special-status species, as defined by the California Department of Fish and Wildlife (CDFW) or the United States Fish and

Wildlife Services (USFWS). Therefore, no adverse impacts are anticipated. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

Summary of Certified SEIR Finding: The Certified SEIR concluded that implementation of TOP 2050 would not result in direct vegetation removal in surface water areas in the City; however, projects approved pursuant to TOP 2050 could indirectly result in such removal. Projects that would result in impacts to surface water areas determined to be jurisdictional to the state would require CDFW approval pursuant to the Fish and Game Code (Section 1600 et. seq.) in the form of Streambed Alteration Agreements. Compared to TOP, TOP 2050 would have similar impacts to sensitive habitat because it would not result in the development of new, previously undeveloped areas of the City even though it would result in an increase in land use intensity. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site is completely developed/disturbed, as it was in 2022 when the Certified SEIR was certified. The Project site is currently developed with commercial uses and is in a highly urbanized and industrialized area in the City. The Project site does not contain any riparian habitat or other sensitive natural community identified by the Department of Fish & Game or Fish & Wildlife Service (USFWS, 2020). Therefore, the Project would not result in significant impacts to riparian habitat or other sensitive natural communities. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

c. Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the Cucamonga Creek and Deer Creek channels and portions of the Lower Deer Creek, Day Creek, Etiwanda Creek, and West Cucamonga Creek channels, are owned and maintained by San Bernardino County; they are not subject to land use controls by the City of Ontario and would not be affected by TOP 2050. Remaining segments of the Lower Deer Creek, Day Creek, Etiwanda Creek, and West Cucamonga Creek channels in the City that are owned by the City of Ontario, would be designated Open Space–Non-recreation by TOP 2050 and would not be developed with other land uses. Implementation of TOP 2050 would not result in direct impacts to waters of the State because TOP 2050 does not grant specific entitlements for development. Individual projects undergoing environmental review under CEQA would be required to determine whether there is potential habitat on-site for sensitive species. Compared to TOP, TOP 2050 would have similar impacts to jurisdictional waters since TOP 2050 would result in an increase in land use intensity but would not result in development of new, previously undeveloped areas of the City. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial

increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: No wetland habitat is present on site (USFWS, 2020). Therefore, Project implementation would have no impact on these resources. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Summary of Certified SEIR Finding: The Certified SEIR concluded that no regional wildlife movement corridors have been identified in the City, most of which is ill suited for the purposes of wildlife movement. There are trees and shrubs scattered throughout the City that may be used for nesting or roosting by migrating birds. Individual projects would require to comply with the federal Migratory Bird Treaty Act of 1918 (MBTA). Therefore, TOP 2050 is not anticipated to have substantial adverse impacts to migratory birds. Furthermore, Policy ER-5.1 would encourage efforts to conserve flood control channels and transmission line corridors as wildlife movement corridors. Consequently, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: No surface water bodies; streams or waterways occur on the Project site. The Project site does not provide nursery sites for wildlife, nor is it conducive to function as a corridor for migratory wildlife. There are a limited number of ornamental trees on site that would be removed and replaced with new trees and landscaping. The MBTA implements the United States' commitment to four treaties with Canada, Japan, Mexico, and Russia for the protection of shared migratory bird resources. Nesting migratory birds are protected under the MBTA (United States Code, Title 16, Sections 703–712) and California Fish and Game Code Sections 3503 et seq. Consistent with the findings of the Certified SEIR, compliance with federal MBTA and California Fish and Game Code would eliminate any potential impacts. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Summary of Certified SEIR Finding: The Certified SEIR discussed this impact along with threshold f below with emphasis on the impacts to the Delhi Sands Flower-Loving Fly (DSFLF) Ontario Recovery Unit. Projects proposed within the Ontario Recovery Unit would be required to conduct focused surveys for DSFLF on the project site and consult with the USFWS regarding mitigation of impacts on any DSFLF found. TOP 2050 would not grant specific entitlements for development and would not conflict with FESA requirements and USFWS regulations regarding critical habitat. Furthermore, Policy ER-5.1 of TOP 2050 would support efforts to conserve high-quality habitat for the DSFLF. Individual projects undergoing environmental review under CEQA would be required to determine whether there is a potential for habitat onsite for sensitive species. TOP 2050 would have similar impacts regarding consistency with a habitat conservation plan.

Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: Section 10-2 of the Ontario Municipal Code addresses tree protection, maintenance, and replacement policies for trees within the City's parkways and rights-of-way. Additionally, the City has published landscape guidelines that must be followed when developing new or existing sites. All existing trees within the site will be removed as part of the Project. As shown in Figure 5, *Landscape Plan*, a total of 342 trees would be planted in accordance to the City's landscaping guidelines. Therefore, the Project would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance, and impacts would be less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

f. Conflict with the provisions of an adopted Habitat Conservation Plan (HCP), Natural Community Conservation Plan (NCCP), or other approved local, regional, or state habitat conservation plan?

Summary of Certified SEIR Finding: As discussed above, TOP 2050 would have similar impacts regarding consistency with a habitat conservation plan. There is one habitat conservation plan in the City, a 19-acre area near the intersection of Greystone Drive and the eastern city boundary established to protect the DSFLF. The HCP area would remain designated Industrial under the Proposed Project. Any project proposed for development within this HCP pursuant to TOP 2050 would be required to consult with the USFWS regarding project impacts on DSFLF and mitigation of any such impacts. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site is not part of an adopted HCP, NCCP or other approved habitat conservation plan (CDFW, 2019). The Project site is located approximately 1.53 miles north from the HCP area. As a result, no adverse environmental impacts are anticipated. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

5. CULTURAL RESOURCES. Would the project:

a. Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5?

Summary of Certified SEIR Finding: The Certified SEIR concluded that Ontario has eight historic districts, and four proposed and five potential historic districts are deemed eligible for listing. The City's Register of Historic Resources shows 1,957 historic resources, 99 of which are designated Historic Landmark properties. The Development Code establishes criteria for Tier I, Tier II or Tier III properties, with Tier I and II being of the highest value. Given this strong policy of the City and the programmatic nature of TOP 2050, implementation of TOP 2050 would not result in significant impacts to Tier I and II resources. Tier III consists of all properties that are Designated

Historic Landmarks, are contributing structures in Designated Historic Districts, or are Eligible Historical Resources, as defined by the Development Code. Demolition of these properties should be avoided where possible, but may be appropriate under certain circumstances. If demolition occurs, the City requires historic resources to be documented and historic features to be salvaged, and requires a demolition mitigation fee. The Development Code does not provide a high level of protection for Tier III resources. As a result, historical resources categorized under the ordinance as Tier III could potentially be impacted with implementation of TOP 2050. Mitigation Measure 5-1 would require historic or potentially historic resources to be evaluated for historic significance through the City's Development Code tier system. Impacts to historical resources would remain significant and unavoidable.

Discussion of Effects: A project-related significant adverse effect would occur if a project were to adversely affect a historical resource meeting one of the definitions listed below. CEQA Guidelines Section 15064.5 defines historic resources as resources listed or determined to be eligible for listing by the Historic Resources Commission, a local register of historic resources, or the lead agency. Generally, a resource is considered "historically significant" if it meets one of the following criteria:

- Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
- Is associated with the lives of persons important to our past;
- Embodies the distinctive characteristics of a type, period, region, or method of construction or represents the work of an important creative individual, or possesses high artistic values;
- Has yielded, or may be likely to yield, information important in prehistory or history.

The Project site is not listed as a Tier 1, II, or III historical resources under the TOP 2050. Therefore, the Project would not cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5, and no impacts would occur. Additionally, the existing buildings onsite were constructed in 1987 and 1998 and less than 45 years old. The Project would not result in any impacts to historical resources. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

Summary of Certified SEIR Finding: The Certified SEIR concluded the records review at the South-Central Coastal Information Center (SSCIC) identified 17 archeological resources in the City. Based on the results of the research, there is potential archaeological sensitivity throughout the City. Adoption of TOP 2050 would not directly affect archaeological resources. However, long-term implementation of TOP 2050 land use plan could allow development (e.g., new development, infill development, redevelopment, and revitalization/restoration), including grading, of known and unknown sensitive areas. Grading and construction activities of undeveloped areas or redevelopment that requires more intensive soil excavation than in the past could potentially cause the disturbance of archeological resources. Therefore, future

development that would be accommodated by TOP 2050 could potentially unearth previously unrecorded resources. Mitigation Measure 5-2 would require preservation and curation of archeological resources if uncovered during development. Mitigation Measure 5-2 would reduce potential impacts to archeological resources to a level that is less than significant. Therefore, impacts to archaeological resources would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: A cultural records search, included as Technical Appendix B, with data from the South-Central Coastal Information Center at California State University, Fullerton was conducted for the Project which encompassed an area of one-mile surrounding the Project site. Based on the results of the records search, no resources were recorded in the Project site and one resource has been recorded within one-mile of the Project site. The resource is a historic railroad. The records search results also indicate that 18 previous studies have been conducted within one-mile of the Project site, one (1) of which included the Project site and did not identify any cultural resources. (BFSA, 2023a)

While no adverse impacts to archeological resources are anticipated at this site due to its urbanized nature and extent of prior ground disturbance, the presence of previously undiscovered subsurface archaeological resources on the Project site remains possible, and these resources could be affected by ground-disturbing activities associated with grading and construction at the site. As a result, consistent with the findings of the Certified SEIR, Mitigation Measure 5-2 would be implemented to ensure the proper treatment of significant archaeological resources should they be encountered during ground-disturbing construction activities in native soil. Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required. The following mitigation measure from the Certified SEIR is applicable to the Project:

MM 5-2 In areas of documented or inferred from evident archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements:

a) Archaeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities.

b) Should any cultural resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources.

c) Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates,

and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including a catalog with museum numbers.

c. Disturb any human remains, including those interred outside of dedicated cemeteries?

Summary of Certified SEIR Finding: The Certified SEIR concluded there are known Native American gravesites and cemeteries in the City, including Bellevue Memorial Park on the north side of G Street, between Benson Avenue and Mountain Avenue. TOP 2050 in itself does not involve grading activities and would not directly disturb any human remains. However, long-term implementation of TOP 2050 would allow development and redevelopment, including grading of sensitive areas, possibly disturbing human remains, including those outside of formal cemeteries. Although soil-disturbing activities associated with development in accordance with TOP 2050 could result in the discovery of human remains, compliance with existing law including California Health and Safety Code, Section 7050.5; CEQA Section 15064.5; and PRC Section 5097.98 would ensure that significant impacts to human remains would not occur. Therefore, impacts to human remains would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project is in an area that has been previously disturbed by development. The possibility of uncovering human remains during Project-related grading activities is remote due to fact that the previous development of the site has substantially disturbed the subsurface of the site. Thus, human remains are not expected to be encountered during any construction activities. However, as concluded in the Certified SEIR, in the unlikely event that human remains are discovered, existing regulations, including the California Public Resources Code Section 5097.98 and California Health and Safety Code Section 7050.5, would afford protection for human remains discovered during redevelopment activities including but not limited to demolition, site preparation and grading, infrastructure installation, and other ground-disturbing activities. Furthermore, standard have been imposed on the Project that in the event of unanticipated discoveries of human remains are identified during excavation and construction activities, the area shall not be disturbed until any required investigation is completed by the County Coroner and/or Native American consultation hasb been completed, if deemed applicable. Mandatory compliance with these requirements would ensure that no impacts associated with the discovery of human remains would occur. Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

6. ENERGY. Would the project:

a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the types of land uses accommodated under TOP 2050 would also be similar to the land uses accommodated under TOP. Thus, the construction processes for future development projects accommodated under TOP 2050 would be similar to the construction processes of current development projects and projects accommodated under TOP. Therefore, TOP 2050 would not result in wasteful, inefficient, or unnecessary consumption of fuel use during construction.

Operation of new development projects accommodated under TOP 2050 would create additional demands for electricity and natural gas compared to existing conditions. Overall, regulatory compliance will increase building energy efficiency and vehicle fuel efficiency and reduce building energy demand and transportation-related fuel usage. Additionally, TOP 2050 includes policies related to land use and transportation planning and design, energy efficiency, public and active transit, and renewable energy generation that will contribute to minimizing building and transportation-related energy demands overall and demands on nonrenewable sources of energy. Implementation of proposed policies under TOP 2050 and Community Climate Action Plan (CCAP) in conjunction with regulatory requirements would ensure that energy demand associated with growth under TOP 2050 would not be inefficient, wasteful, or unnecessary. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project would implement the TOP 2050 land use plan and the Project's proposed land use and development intensity is consistent with the development regulations contained within the TOP 2050. The proposed building would be approximately 54,641 s.f. less than the maximum allowed under TOP 2050. Therefore, the development proposed by the Project – and its energy use – is within the scope of the Project that was evaluated in the Certified SEIR. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Summary of Certified SEIR Finding: The Certified SEIR concluded that land uses accommodated under TOP 2050 would comply with the current and future iterations of the Building Energy Efficiency Standards and CALGreen. Additionally, TOP 2050 includes Environmental Resources Element policies and Safety Element policies that would support the statewide goal of transitioning the electricity grid to renewable sources and employ best practices regarding energy-saving standards. Therefore, implementation of TOP 2050 would not conflict with or obstruct implementation of California's Renewables Portfolio Standard (RPS) program. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project would not conflict with or obstruct a state or local plan adopted for the purposes of increasing the amount of renewable energy or energy efficiency. The California Title 24 energy efficiency standards for non-residential buildings address electricity and natural gas efficiency in lighting, water, heating, and air conditioning, as well as the effects of the building envelope (e.g., windows, doors, walls and rooves, etc.) on energy consumption. Consistent with the findings of the Certified SEIR, the Project would be required to comply with the Title 24 CALGreen standards current at that time and the City's CCAP. Since each new building will comply with applicable State standards and adhere to the City's CCAP, which includes energy reductions measures, the Project would not conflict with nor obstruct a state or local plan for renewable energy or energy efficiency. Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

7. GEOLOGY & SOILS. Would the project:

a. Expose people or structures to potential substantial adverse effects, including the risk of loss, injury or death involving:

i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

Summary of Certified SEIR Finding: The Certified SEIR concluded that the City of Ontario is not within any Alquist-Priolo Earthquake Fault Zone. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: Ground rupture is the visible offset of the ground surface when an earthquake rupture along a fault affects the Earth's surface. Southern California, including the City of Ontario, is subject to the effects of seismic activity due to the active faults that traverse the area. Active faults are defined as those that have experienced surface displacement within Holocene time (approximately the last 11,000 years) and/or are in a State-designated Alquist-Priolo Earthquake Fault Zone. According to the Project-specific Geotechnical Investigation, included as Appendix C.1, the Project site is not located with an Alquist-Priolo Earthquake Fault Zone. (SoCal Geo, 2021) Fault rupture would not occur on the Project site since no active faults cross the Project site. Therefore, no adverse impacts are anticipated. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

ii. Strong seismic ground shaking?

Summary of Certified SEIR Finding: The Certified SEIR concluded that projects considered for approval under TOP 2050 would be required to comply with seismic safety provisions of the CBC (Title 24, Part 2 of the California Code of Regulations). Such compliance would reduce hazards arising from ground shaking to less than significant. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: Southern California is a seismically active area and properties in the City of Ontario, including the Project site, are subject to periodic ground shaking and other effects from earthquake activity along nearby regional faults. The Project site is not at an increased risk relative to the surrounding areas. Consistent with the findings in the Certified SEIR, Project-related structures and buildings would be required to be designed and built-in compliance with the California Building Code (CBC [California Code of Regulations, Title 24, Part 2]), which contains provisions for earthquake safety based on factors including occupancy type, the types of soil and rock onsite, and the probable strength of ground motion, the Ontario Municipal Code, TOP 2050, and all other ordinances adopted by the City related to construction and safety. Therefore, as structures would be designed to meet or exceed CBC standards for earthquake resistance, redevelopment of the Project would not create significant impacts related to seismic ground shaking. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No

changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

iii. Seismic-related ground failure, including liquefaction?

Summary of Certified SEIR Finding: The Certified SEIR concluded that there is currently no potential for liquefaction based on groundwater levels throughout the City being greater than 50 feet below ground surface. Therefore, no impact would occur.

Discussion of Effects: Seismic-related ground failure includes, but is not limited to, liquefaction. Liquefaction is a seismic phenomenon in which loose, saturated, granular soils behave similarly to fluids when subject to high intensity seismic events. Liquefaction occurs when three general conditions coexist: 1) shallow groundwater, 2) low-density non-cohesive (granular) soils and 3) high-intensity ground motion. According to the Geotechnical Investigation, the Project site is not located within an area of liquefaction susceptibility and groundwater is considered to have existed at depth in excess of 25 feet due to the lack of water encountered at all borings (SoCal Geo, 2021). Therefore, consistent with the findings in the Certified SEIR, the Project does not have the potential to expose people or structures to seismic-related liquefaction. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

iv. Landslides?

Summary of Certified SEIR Finding: The Certified SEIR did not identify any specific constraints regarding landslides.

Discussion of Effects: Slope failures in the form of landslides are common during strong seismic shaking in areas of steep hills. The Project site and surrounding area are generally flat with no significant slopes. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Result in substantial soil erosion or the loss of topsoil?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the young alluvial sediment and wind-blown sand underlying the City are generally granular, poorly consolidated, and very susceptible to erosion. However, compliance with the CBC and review of grading plans for individual projects by the City Engineer would ensure no significant impacts would occur. In addition, construction activities on project sites larger than one acre are required to prepare a Stormwater Pollution Prevention Plan (SWPPP) that details best management practices (BMPs) to reduce the potential for erosion during construction activities. Furthermore, TOP 2050 includes the following policies regarding erosion and loss of topsoil: ER-1.6, ER 4.7, S-5.1, and S-5.2. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: Erosion is the movement of rock and soil from place to place. Erosion

occurs naturally by agents such as wind and flowing water; however, grading and construction activities can greatly increase erosion if effective erosion control measures are not used. Common means of soil erosion from construction sites include water, wind, and being tracked offsite by vehicles. The Project site is in a highly urbanized, built-out portion of the City and is largely flat; soils have already been disturbed by existing development. Because the Project site is fully developed and contains very little exposed soils, existing erosion occurring on the site is minimal.

The State Water Resources Control Board (SWRCB) Order No. 2009-0009-DWQ (General Construction Permit) contains water quality standards and stormwater discharge requirements that apply to construction projects of one acre or more. The General Construction Permit was issued pursuant to the National Pollutant Discharge Elimination System (NPDES) regulations for implementing part of the federal Clean Water Act. The General Construction Permit requires preparation of a SWPPP that identifies the sources of pollution that may affect the quality of stormwater discharges and describes and ensures the implementation of BMPs to reduce the pollutants, including silt and soil, in construction stormwater discharges. Examples of BMPs that are commonly included in SWPPPs are shown in Table 7-1, below.

Table 7-1 Examples of Construction-Phase Stormwater Pollution Prevention BMPs

Category	Goal	Sample Measures
Erosion Controls	Prevent soil particles from being detached from the ground surface and transported in runoff	Preserving existing vegetation; soil binders; geotextiles and mats
Sediment controls	Filter out soil particles that have entered runoff	Barriers such as slit fences and gravel bag berms; and street sweeping
Tracking Controls	Prevent soil from being tracked offsite by vehicles	Stabilized construction roadways and entrances/exits
Wind Erosion Control	Prevent soil from being transported offsite by wind	Similar to erosion controls above
Non-stormwater Management	Prevent discharges of soil from site by means other than runoff and wind	BMPs regulating various construction practices; water conservation
Waste and Materials Management	Prevent release of waste materials into storm discharges	BMPs regulating storage and handling of materials and wastes

Future development within the Project site will be required to comply with the NPDES permit by preparing and implementing a SWPPP specifying BMPs for minimizing pollution of stormwater with soil and sediment during Project construction. Consistent with the findings in the Certified SEIR, adherence to the BMPs in the SWPPP would reduce, prevent, or minimize soil erosion from Project-related demolition, site preparation and grading, and construction activities. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the thick alluvial deposits comprising the Chino Subbasin may be susceptible to compaction, with resulting

subsidence at the surface, in the event of rapid groundwater withdrawal. Projects considered for approval under TOP 2050 could expose structures or persons to potentially significant hazards from ground subsidence. However, compliance with the CBC and review of grading plans for individual projects by the City Engineer would ensure no significant impacts would occur.

Additionally, the young sediments underlying the City are generally dry and loose in the upper few feet, and therefore are susceptible to compression. Much of the Ontario Ranch has been intensively farmed and is especially susceptible to compression. Developments approved pursuant to TOP 2050 could expose persons or structures to potentially significant hazards from compressible soils. However, compliance with the CBC and review of grading plans for individual projects by the City Engineer would ensure no significant impacts would occur.

Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: As stated previously, the Project site is not susceptible to landslides or liquefaction. The potential for other geologic hazards on the Project site, including lateral spreading, subsidence or collapse is considered low (SoCal Geo, 2021). Furthermore, Project-related structures and buildings would be required to be designed and built-in compliance with the CBC and the Ontario Municipal code, which requires the Project to implement the recommendations of the site-specific geotechnical investigation. The recommendations require foundations to be constructed based on the expansion index and shear strength of onsite soils. Consistent with the findings in the Certified SEIR, compliance with the CBC and Ontario Municipal code would ensure that impact would be less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?

Summary of Certified SEIR Finding: The Certified SEIR concluded that expansive soils are likely in the southern parts of the City, where there are silts, sandy silts, and silty clays. Projects in the southern part of the City under TOP 2050 could expose persons or structures to potentially significant hazards from expansive soils. However, compliance with the CBC and review of grading plans for individual projects by the City Engineer would ensure no significant impacts would occur. Therefore, impacts related to expansive soils would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: Expansive soils are defined as soils possessing clay particles that react to moisture changes by shrinking or swelling. According to the Project's Geotechnical Investigation, the near-surface soils consist of well graded sands and silty sands with no appreciable clay content. These materials have been visually classified as non-expansive (SoCal Geo, 2021). Therefore, no adverse impacts are anticipated. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

Summary of Certified SEIR Finding: The Certified SEIR concluded that wastewater from the City is treated at wastewater treatment facilities owned and operated by the IEUA. Use of septic tanks would be limited to existing septic tanks, and new septic tanks would be constricted to areas not in practical proximity to existing sewer mains, dependent on approval by the Santa Ana Regional Water Quality Control Board on a case-by-case basis. Therefore, impacts related to septic tanks would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: No septic tanks will be used as part of the proposed Project. The Project would connect to the existing waste water disposal system. Accordingly, no impact would occur. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the City is underlain by deposits of Quaternary and upper-Pleistocene sediments deposited during Pliocene and early Pleistocene time. Quaternary Older Alluvial sediments may contain significant, nonrenewable, paleontological resources and are therefore considered to have high sensitivity. Older Pleistocene alluvial sediments can yield fossil remains, often found at depths of 10 feet or more below existing ground surface. As a result, the possibility of finding additional paleontological resources within City boundaries is moderate to high at depths of 10 feet or more below ground surface. Therefore, future development that would be accommodated by TOP 2050 could potentially unearth previously unrecorded resources. Mitigation Measure 5-2 requires that in the event of an unanticipated discovery of paleontological resources during grading and excavation of the site, a qualified paleontologist would assess the find and develop a course of action to preserve the find. Therefore, with the implementation of Mitigation Measure 5-2, potential impacts to paleontological resources would be reduced to a level that is less than significant.

Discussion of Effects: According to the Project's Paleontological Resource Assessment, included as Appendix G.2, the young eolian/alluvial deposits below the artificial fill at the Project site may be considered to have a low potential for paleontological resources, but increase to an undetermined to high potential for yielding significant paleontological resources with increasing depth and age. Therefore, there is potentially significant impacts related to paleontological resources. (BFSA, 2023b)However, the Project would be required to implement Mitigation Measure 5-2 to ensure construction activities will not continue or will be moved to other parts of the project site and a qualified paleontologist shall be contacted to determine the significance of these resources in the event unanticipated paleontological resources are identified during excavation. Consistent with the findings of the Certified SEIR, With the implementation of Mitigation Measure 5-2, impacts to paleontological resources would be less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required. The following mitigation measure from the

Certified SEIR is applicable to the Project:

MM CUL 5-2 In areas of documented or inferred from evident archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements:

a) Archaeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities.

b) Should any cultural resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources.

c) Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including a catalog with museum numbers.

8. GREENHOUSE GAS EMISSIONS. Would the project:

a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Summary of Certified SEIR Finding: The Certified SEIR concluded that GHG emissions associated with TOP 2050 would be slightly higher compared to those of TOP in the absence of local measures identified in the Community Climate Action Plan (CCAP) and would not meet the 2050 GHG target of 2.0 $MTCO_2e$ per capita. With implementation of the CCAP, TOP 2050 would result in a decrease in emissions. The City would achieve the Executive Order (EO) S-03-05 GHG emissions reduction targets, resulting in an 80 percent decrease in GHG emissions in the City by 2050 from existing conditions, and would make substantial progress toward the State's carbon neutrality goals under EO B-55-18. Therefore, TOP 2050, which includes the CCAP, would reduce GHG emissions impacts compared to TOP. Impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The analysis in this section is based on the Woodruff Logistics Air Quality & Greenhouse Gas Assessment prepared by Urban Crossroads, Inc. (Urban Crossroads) dated April 4, 2023. This report is provided in its entirety as Appendix A of this Addendum.

The CCAP establishes an annual screening threshold of 3,000 $MTCO_2e$/yr to define small projects that are considered less than significant and do not require further GHG emissions calculations or analysis. Projects that do not exceed an annual 3,000 $MTCO_2e$/yr are therefore

considered less than significant and would not require further analysis or mitigation.

The Project's annual GHG emissions are summarized in Table 8-1, *Project GHG Emissions*. As shown in Table 8-1, the Project will result in total GHG emissions of approximately 3,557.75 $MTCO_2e$/yr. However, when compared to emissions generated by the TOP 2050 adopted Industrial land use designation, the Project would result in a net decrease of 2,489.88 $MTCO_2e$/yr. As such, Project-related emissions would not have a potential significant direct or indirect impact on GHG and climate change and impacts would be less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Table 8-1 Project GHG Emissions

Source	Emission (lbs/day)				
	CO_2	CH_4	N_2O	R	Total CO_2e
Annual construction-related emissions amortized over 30 years	27.07	1.33E-03	1.33E-03	1.93E-02	27.53
Mobile Source	1,927.00	0.09	0.15	3.62	1,978.00
Area Source	6.99	< 0.005	< 0.005	0.00	7.02
Energy Source	775.00	0.07	0.01	0.00	779.00
Water Source	113.00	2.60	0.06	0.00	196.00
Waste Source	28.90	2.89	0.00	0.00	101.00
Refrigerants Source	0.00	0.00	0.00	58.20	58.20
On-Site Equipment Source	0.00	0.00	0.00	0.00	94.73
TRU Source	0.00	0.00	0.00	0.00	316.27
Total CO_2e (All Sources)	**3,557.75**				
TOP 2050	6,047.63				
Net Emissions (Proposed – TOP 2050)	**-2,489.88**				

Source: (Urban Crossroads, 2023a, Tables 13, 15, 16 and 17)

Mitigation Required: No additional mitigation required.

b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Summary of Certified SEIR Finding: The Certified SEIR concluded that development projects accommodated under TOP 2050 are required to adhere to the programs and regulations identified by the 2017 Scoping Plan and implemented by state, regional, and local agencies to achieve the statewide GHG reduction goals of AB 32 and SB 32. Implementation of TOP 2050 would not obstruct implementation of the CARB Scoping Plan. Additionally, TOP 2050 would provide for residents to both live and work in the City instead of commuting to other areas, which would contribute to minimizing VMT and reducing VMT per service population. Therefore, TOP 2050 would not interfere with SCAG's ability to implement the regional strategies in Connect SoCal. Impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: Since certification of the Certified SEIR, CARB has adopted the 2022 Scoping Plan. Pursuant to Section 15604.4 of the State CEQA Guidelines, a lead agency may rely on qualitative analysis or performance-based standards to determine the significance of impacts from GHG emissions. As such, the Project's consistency with SB 32 (2022 Scoping Plan) is discussed below.

The 2022 Scoping Plan for Achieving Carbon Neutrality (2022 Scoping Plan) lays out a path to achieve targets for carbon neutrality and reduce anthropogenic GHG emissions by 85 percent below 1990 levels no later than 2045, as directed by Assembly Bill 1279. The actions and outcomes in the plan will achieve significant reductions in fossil fuel combustion by deploying clean technologies and fuels, further reductions in short-lived climate pollutants, support for sustainable development, increased action on natural and working lands to reduce emissions and sequester carbon, and the capture and storage of carbon. The Project would not impede the State's progress towards carbon neutrality by 2045 under the 2022 Scoping Plan. The Project would be required to comply with applicable current and future regulatory requirements promulgated through the 2022 Scoping Plan. Some of the current transportation sector policies the Project will comply with (through vehicle manufacturer compliance) include: Advanced Clean Cars II, Advanced Clean Trucks, Advanced Clean Fleets, Zero Emission Forklifts, the Off-Road Zero-Emission Targeted Manufacturer rule, Clean Off-Road Fleet Recognition Program, In-use Off-Road Diesel-Fueled Fleets Regulation, Off-Road Zero-Emission Targeted Manufacturer rule, Clean Off-Road Fleet Recognition Program, Amendments to the In-use Off-Road Diesel-Fueled Fleets Regulation, carbon pricing through the Cap-and-Trade Program, and the Low Carbon Fuel Standard. Finally, the Project is consistent with the general plan land use designation, density, building intensity, and applicable policies specified for the Project area in SCAG's Sustainable Community Strategy/ Regional Transportation Plan, which pursuant to SB 375 calls for the integration of transportation, land-use and housing policies to plan for achievement of the GHG-emissions target for the region. Thus, a less than significant impact related to GHG emissions from Project construction and operation would occur. (Urban Crossroads, 2023a) Therefore, the Project would not have the potential to conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation Required: No additional mitigation required.

9. HAZARDS & HAZARDOUS MATERIALS. Would the project:

The analysis in this section is based on the Phase I Environmental Site Assessment prepared by Ramboll US Consulting, Inc. (Ramboll) dated October 2021 and is provided in their entirety as Appendix D of this Addendum.

a. Create a significant hazard to the public or the environment through the routine transport, use or disposal of hazardous materials?

Summary of Certified SEIR Finding: The Certified SEIR discussed thresholds a, b, and c together and concluded that implementation of TOP 2050 would increase the number of businesses and residents in the City, thereby increasing the amount of hazardous materials being transported, stored, and manufactured, and the number of people exposed to these materials. The City of Ontario has around 127 facilities or sites that generate, transport, treat, store, and/or dispose of hazardous waste, as recorded by the national Resource Conservation and Recovery Act (RCRA) Envirofacts Database. An increase in the transport of hazardous waste from an

increased demand for transport, use, and disposal within or outside the City could result in more accidents leading to the release of hazardous materials. Demolition activities that have the potential to expose construction workers and/or the public to asbestos-containing materials or lead-based paint will be conducted in accordance with applicable regulations. Current federal and state regulations, City ordinances, and TOP 2050 policies would regulate the handling of hazardous substances to reduce potential releases; exposure; and risks of transporting, storing, treating, and disposing of hazardous materials and wastes. Therefore, additional hazardous waste transport, use, and/or disposal that would occur upon the buildout of TOP 2050 would be less than significant with adherence to the existing regulations and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: A significant impact may occur if a project would involve the use or disposal of hazardous materials as part of its routine operations, or would have the potential to generate toxic or otherwise hazardous emissions that could adversely affect sensitive receptors. The Project Applicant proposes to redevelop the Project site with a building that has the potential to store hazardous materials during the future building user's daily operations. As demonstrated in the analysis below, the Project would not result in a hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Existing and Historical Uses of the Project Site

Based on a review of regulatory databases and a site reconnaissance, the Project site does not contain any Recognized Environmental Conditions (RECs), Historical Recognized Environmental Conditions (HRECs), or Controlled Recognized Environmental Conditions (CRECs), nor is the Project site affected by any off-site hazards or hazardous materials. Hazardous materials used, stored, and/or generated on the Project site were found to be properly labeled and stored at the time of the assessment with no signs of leaks, strains, or spills. The aboveground storage tanks (ASTs) observed on the Project site were determined to not represent a significant environmental concern. The historical industrial and agricultural uses of the Project site do not represent a REC or human health risk. No RECs or HRECs were identified that would negatively impact the environment. (Ramboll, 2021) As a result, implementation of the Project would result in less than significant impacts related to onsite soil contamination.

Project Construction

General Construction Hazardous Waste

Heavy equipment (e.g., dozers, excavators, tractors) would operate on the subject property during construction of the Project. Heavy equipment is typically fueled and maintained by petroleum-based substances such as diesel fuel, gasoline, oil, and hydraulic fluid, which is considered hazardous if improperly stored or handled. Also, materials such as paints, adhesives, solvents, and other substances typically used in building construction would be located on the Project site during construction. Improper use, storage, or transportation of hazardous materials can result in accidental releases or spills, potentially posing health risks to workers, the public, and the environment. This is a standard risk on all construction sites, and there would be no greater risk for improper handling, transportation, or spills associated with the proposed Project than would occur on any other similar construction site. Construction contractors would be required to comply with all applicable federal, State, and local laws and regulations regarding the transport, use, and storage of hazardous construction-related materials, including but not limited requirements imposed by the EPA, California Department of Toxic Substances Control (DTSC), South Coast

AQMD, and Santa Ana Regional Water Quality Control Board (RWQCB). Consistent with the findings of the Certified EIR, with mandatory compliance with applicable hazardous materials regulations, the Project would not create a significant hazard to the public or the environment through routine transport, use, or disposal of hazardous materials during the construction phase.

Demolition

The use of asbestos-containing materials (ACM, a known carcinogen) and lead-based paint (LBP) (a known toxic), both of which are considered hazardous materials, was a common building construction prior to 1981 and 1978, respectively. The existing buildings onsite were constructed in 1987 and 1998; therefore, it is unlikely that ACM and LBP were used on these buildings. However, although unlikely, since asbestos had continued to be used in some buildings during the 1980s, , the possibility of asbestos cannot be ruled out (Ramboll, 2021). All proposed demolition activities would be required to comply with all applicable federal, State, and local hazardous materials regulation, which includes mandatory provisions for the safe removal, transport, and disposal of ACMs.

South Coast AQMD Rule 1403 establishes survey requirements, notification, and work practice requirements to prevent asbestos emissions from emanating during building renovation and demolition activities. Assuming that ACMs are present in the existing structure located on-site, then Rule 1403 requires notification of the South Coast AQMD prior to commencing any demolition activities. Rule 1403 also sets forth specific procedures for the removal of asbestos and requires that an on-site representative trained in the requirements of Rule 1403 be present during the stripping, removing, handling, or disturbing of ACM. Mandatory compliance with the provisions of Rule 1403 would ensure that construction-related grading, clearing, and demolition activities do not expose construction workers or nearby sensitive receptors to significant health risks associated with ACMs. Because future development on the Project site would be required to comply with AQMD Rule 1403 during demolition activities, impacts due to asbestos would be less than significant.

Project Operation

Future users of the proposed on-site Project building are not yet known. Future uses on-site are assumed to be those permitted by the TOP 2050 and CCCSP zoning designations. Future users have the potential to use hazardous materials (i.e., gasoline, diesel, biodiesel fuels, and oil) during the course of daily operations at the Project site. In the event that hazardous materials, other than those common materials described above, are associated with future warehouse operations, the hazardous materials would only be stored and transported to and from the building site. Federal and State Community-Right-to-Know laws allow the public access to information about the amounts and types of chemicals that may be used by the businesses that would operate at the Project site. Laws also are in place that require businesses to plan and prepare for possible chemical emergencies. Pursuant to the City of Ontario Municipal Code, any business involved in the use, production, storage, or transfer of any material defined as hazardous and subject to regulation by San Bernadino County Department of Public Health and/or subject to regulation by the South Coast Air Quality Management District per Rules 1401, 1402, and 1403. Such businesses are also required to comply with California's Hazardous Materials Release Response Plans and Inventory Law, which require immediate reporting to San Bernadino County Fire Protection District and State Office of Emergency Services regarding any release or threatened release of a hazardous material, regardless of the amount handled by the business.

The operation of the Project would be required to comply with all applicable federal, State, and local regulations to ensure the proper transport, use, and disposal of hazardous

substances. Consistent with the findings of the Certified SEIR, with mandatory regulatory compliance, potential hazardous materials impacts associated with long-term operation of the Project is not expected to pose a significant hazard to the public or environment through the routine transport, use, or disposal of hazardous materials, nor would the Project increase the potential for accident operations which could result in the release of hazardous materials into the environment. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Summary of Certified SEIR Finding: As discussed above, the Certified SEIR concluded that additional hazardous waste transport, use, and/or disposal that would occur upon the buildout of TOP 2050 would be less than significant with adherence to the existing regulations and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: During Project construction, there is a possibility of accidental release of hazardous substances such as petroleum-based fuels or hydraulic fluid used for construction equipment. The level of risk associated with the accidental release of hazardous substances is not considered significant due to the small volume and low concentration of hazardous materials utilized during construction. The construction contractor would be required to use standard construction controls and safety procedures that would avoid and minimize the potential for accidental release of such that any materials released are appropriately contained and remediated as required by local, State, and federal law.

Construction

The Project would comply with the requirements of applicable laws and regulations governing upsets and accidents including the requirements of the hazardous materials disclosure program, the California Accidental Release Prevention Program, the hazardous materials release response plans and inventory program, and California Health and Safety Code Section 25500.

These requirements would ensure that all potentially hazardous materials are handled in an appropriate manner and would minimize the potential for upset and accident conditions. For example, all spills or leakage of petroleum products during construction activities are required to be immediately contained, the hazardous material identified, and the material remediated in compliance with applicable state and local regulations for the cleanup and disposal of that contaminant. All contaminated waste would be required to be collected and disposed of at an appropriately licensed disposal or treatment facility. Therefore, consistent with the findings of the Certified SEIR, this impact is considered less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Operation

Regulatory requirements pertaining to upsets and accidents following during the

construction phase would also be implemented during the operational phase. For the operational phase, both the federal government and the State of California (Health and Safety Code, Division 20, Chapter 6.95, §§ 25500–25520; 19 CCR, Chapter 2, Subchapter 3, Article 4, §§ 2729–2734) require all businesses that handle more than a specified amount of hazardous materials or extremely hazardous materials, termed a reporting quantity, to submit a hazardous materials emergency/contingency plan (also known as a hazardous materials business plan) to their local Certified Unified Program Agency (CUPA). These requirements would ensure that all potentially hazardous materials are handled in an appropriate manner and would minimize the potential for safety impacts. Consistent with the findings of the Certified SEIR, with mandatory regulatory compliance, the Project would not increase the potential for accident conditions which could result in the release of hazardous materials into the environment. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances or waste within one-quarter mile of an existing or proposed school?

Summary of Certified SEIR Finding: The Certified SEIR did not identify any specific constraints regarding hazardous materials within one-quarter mile of an existing or proposed school and analysis were combined with threshold a and b which concluded less than significant impacts.

Discussion of Effects: The Project site is not within 0.25 mile of the existing or proposed school. The closest school to the Project site is the Ontario Center School, located approximately 2.17 miles to the northwest of the Project site. Implementation of the Project would not have the potential to emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within 0.25 miles of an existing or proposed school. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Summary of Certified SEIR Finding: The Certified SEIR concluded that development in accordance with TOP 2050 would involve redevelopment and reuse of some sites listed as hazardous materials sites on environmental databases. Redevelopment of these sites could potentially expose future residents and workers to hazards from known hazardous materials releases on and near the sites. Site assessments for hazardous materials and remediation of hazardous materials releases would be required for redevelopment projects developed in accordance with TOP 2050 and the regulations and policies of the agency assigned to the site. TOP 2050 include policies that address development on and around known hazardous waste sites. Compared to TOP, TOP 2050 would have similar impacts because TOP 2050 would result in an increase in land use intensity rather than development of new, previously undeveloped areas of the City that would require substantial landform modification. Therefore, buildout of TOP 2050 would not expose people to substantial hazards from hazardous materials sites listed on environmental databases and would not result in new or a substantial increase in magnitude of

impacts compared to the Certified EIR.

Discussion of Effects: The Citrus Motors building is listed in the California Environmental Protection Agency Regulated Site Portal (CERS) HAZ WASTE, CERS TANKS, Aboveground Storage Tank (AST), Resource Conservation Recovery Act (RCRA) small quantity generator (SQG), and San Bernardino County Permit (San Bern Co Permit) databases. However, listings on these databases, by themselves, are not necessarily indicative of contamination and these listings are not considered to represent a significant environmental concern. (Ramboll, 2021) Based on the review of the available regulatory information, the Project site is located in an area of historic industrial operations. As discussed in Response 9.a, the Project site does not contain any RECs, HRECs, or CRECs, nor is the Project site affected by any off-site hazards or hazardous materials. Therefore, the Project would not create a significant hazard to the public or the environment. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the consistency determination analysis for the Ontario International Airport (ONT), prepared by the City and submitted to Ontario International Airport – Inter Agency Collaborative (ONT-IAC), found that TOP 2050 is consistent with ALUCP for ONT. Additionally, buildout of TOP 2050 would involve development within the Chino Airport influence area. Projects accommodating TOP 2050 in this area would be required to meet the conditions of the Chino Airport Authority and the 2011 Caltrans Airport Land Use Planning Handbook, including those determining appropriate land uses, maximum population density, maximum site coverage, height restrictions, and required notification/disclosure areas based on the noise contours and runway protection, approach, and Part 77 zones of the adopted Chino Airport Master Plan. The Airport Planning section of TOP 2050 Land Use Element includes policies that would ensure airport planning compatibility and consistency. Therefore, TOP 2050 ensures compatibility with both ONT and Chino Airport. Impacts related to airport safety hazards would be less than significant and would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: According to the Land Use Element (Exhibit LU-06 Airport Safety Zones and Influence Areas) of TOP 2050, the Project site is not located within the Chino Airport Influence Area (City of Ontario, 2022a). According to the ONT Land Use Compatibility Plan (ALUCP), the Project site is located within the ONT Airport Influence Area (City of Ontario, 2011). Specifically, the Project site is located within the 65-70 CNEL noise impact zone and is subject to the Noise Criteria established on Table 2-3 in the ONT ALUCP. According to Table 2-3 of the ONT ALUCP, the Project's industrial warehouse is considered normally compatible land use with exterior noise levels ranging from 65-70 dBA CNEL. For normally compatible land uses, activities associated with the land use may be carried out with minimal interference from aircraft noise. Therefore, the Project would not result in excessive noise for people residing or working in the Project area.

Moreover, according to the Land Use Element (Exhibit LU-06 Airport Safety Zones and Influence Areas) of TOP 2050, the Project site is not located within the ONT safety zones. Therefore, the Project would not result in a safety hazard for people residing or working in the Project area. The Project would not result in any new, increased or substantially different impacts, other than

those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the threat of flood is Ontario's greatest hazard as large portions of the City are within the flood zone, according to the Vulnerability Analysis conducted as part of TOP 2050. There are also substantial improvements in transportation infrastructure planned to accommodate the increase in population in the City in the event of an emergency. Additionally, the Ontario Fire Department reviews development applications to ensure that adequate emergency accessibility is provided based on local and state guidance. Therefore, implementation of TOP 2050 would not Impair implementation of or physically interfere with an adopted emergency response plan. Impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The City's Safety Element includes policies and procedures to be administered in the event of a disaster. The City seeks interdepartmental and inter-jurisdictional coordination and collaboration to be prepared for, respond to and recover from every day and disaster emergencies. The City manages disaster preparedness through the Technical Services Bureau of the Ontario Fire Department. This bureau is responsible for the preparation of the community for disasters and the organization of recovery efforts. The City updated a Local Hazard Mitigation Plan (LMHP) prepared by the Office of Emergency Services of the Ontario Fire Department in 2018. Because the Project site has been historically used for industrial/commercial uses, it is not identified in any of these plans as being an evacuation area.

According to the Federal Emergency Management Agency (FEMA) flood map No. 06071C8641J, the Project site is located within Zone X, an area of minimal flood hazard (FEMA, 2016). Furthermore, construction of the Project would be generally confined to the Project site and would not physically impair access to the site or the Project area. During both construction and long-term operation, the Project would be required to maintain adequate emergency access for emergency vehicles as required by the City and the Ontario Fire Department. In addition, the Project will comply with the requirements of the Ontario Fire Department and all City requirements for fire and other emergency access. As concluded in the Certified SEIR, the Ontario Fire Department reviews development applications to ensure that adequate emergency accessibility is provided based on local and state guidance. Therefore, the Project would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

g. Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the there are many resources available to address wildland fires should they arise, including the CAL FIRE 2019 Strategic Fire Plan for California, the California Fire Code, County of San Bernardino Multi-

jurisdiction Hazard Management Plan, the Ontario LHMP, and fire services from the Ontario Fire Department. With adherence to these building practices, development and infrastructure associated with TOP 2050 would not exacerbate risk or result in post-wildfire hazards (e.g., landslides, mudflows, and flooding). Impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site is fully developed and is within a completely urbanized area that is void of any wildland areas. Additionally, according to the California Department of Forestry and Fire Protection (CalFire), the Project site is not within a very high fire hazard severity zone (CAL FIRE, 2008). Implementation of the Project would not expose people or structures to a significant risk involving wildland fires and would not exacerbate the risk or result in post-wildfire hazards (e.g., landslides, mudflows, and flooding). The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

10. HYDROLOGY & WATER QUALITY. Would the project:

The analysis in this section is based on the Preliminary Water Quality Management Plan and Preliminary Hydrology Study prepared by Thienes Engineering (Thienes) dated June 2022 and is provided in their entirety as Appendices E.1 and E.2 of this Addendum.

a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Summary of Certified SEIR Finding: The Certified SEIR concluded that clearing, grading, excavation, and construction activities associated with TOP 2050 have the potential to impact water quality through soil erosion and increasing the amount of silt and debris carried in runoff. To minimize these potential impacts, future development associated with TOP 2050 would require compliance with the State Water Resources Control Board (SWRCB) Construction General Permit (CGP) Water Quality Order 2009-0009-DWQ as amended by Order No. 2010-0014-DWQ and 2012-006-DWQ. The CGP also requires that prior to the start of construction activities, the project applicant must file permit registration documents (PRD) with the SWRCB prior to the start of construction. The PRDs include a Notice of Intent, risk assessment, site map, Stormwater Pollution Prevention Plan (SWPPP), annual fee, and a signed certification statement. In addition, the City of Ontario requires that an erosion and sediment control plan be submitted prior to grading plan approval and the issuance of a grading permit. Submittal of the PRDs and implementation of the SWPPP and the erosion control plan throughout the construction phase of the Proposed Project would address anticipated and expected pollutants of concern as a result of construction activities.

Pollutants from the post-construction phases of projects include sediment, metals, nutrients, pesticides, and hydrocarbons. TOP 2050 includes policies that direct the City to reduce pollutants in the City's stormwater system. Projects approved under TOP 2050 would be required to control pollutants in discharges of stormwater from postconstruction activities under National Pollution Discharge Elimination System (NPDES) Permit through preparation of a Water Quality Management Plan (WQMP) identifying BMPs for prevention of stormwater pollution during the postconstruction phase, including site-design, source-control, and/or treatment BMPs. Therefore, water quality standards and waste discharge requirements would not be exceeded, and surface water and groundwater quality would not be degraded. Impacts would be less than significant

and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: As demonstrated in the analysis below, the Project would not violate any water quality standards or waste discharge requirements. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Temporary Construction-Related Activities

Construction of the Project would involve demolition, clearing, grading, paving, utility installation, construction, and landscaping activities. Construction activities would result in the generation of potential water quality pollutants such as silt, debris, chemicals, paints and solvents, and other chemicals with the potential to adversely affect water quality. As such, short-term water quality impacts have the potential to occur during construction of the Project in the absence of protective or avoidance measures.

Construction activities would disturb the 16.65-acre site; therefore, the Project is subject to the requirements of the SWRCB GCP, as previously analyzed in the Certified SEIR. Mandatory adherence to the CGP and implementation of measures outlined in the SWPPP would ensure that the Project does not violate any water quality standards or waste discharge requirements during construction activities. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Post-Development Water Quality Impacts

The site would be developed with a building up to 344,110 s.f. and associated parking and landscaping. To meet the requirements of the NPDES permit, the Project Applicant would be required to prepare and implement a WQMP. Implementation of the WQMP ensures on-going, long-term protection of the watershed basin.

According to the Project's Preliminary WQMP, included as Appendix E.1, the Project is designed to include on-site structural source control BMPs consisting of subsurface system and catch basins. In addition, operation source control BMPs would be implemented, including but not limited to, minimizing non-stormwater site runoff through efficient irrigation system design and controllers, providing proper covers/roofs and secondary containment for outside material storage & work areas, providing solid roofs over all trash enclosures, and providing education/training of site occupants and employees on stormwater BMPs (Thienes, 2022b). Compliance with the Preliminary WQMP and long-term maintenance of proposed on-site water quality control features would be required by the City to ensure the long-term effectiveness of all on-site water quality features.

In addition to the WQMP, the NPDES program also requires certain land uses, including the industrial land use proposed by the Project, to prepare a SWPPP for operational activities and to implement a long-term water quality sampling and monitoring program, unless an exemption is granted. Because the permit is dependent upon the operational activities of the building and the tenants are not known at this time, details of the SWPPP (including BMPs) or potential exemption to the SWPPP operational activities requirement cannot be determined at this time. However, based on the requirements of the NPDES Industrial General Permit, the Project's mandatory compliance with all applicable regulations would further reduce potential water quality impacts during long-term operation.

Implementation of the Project would have a beneficial impact on water quality because it would capture all on-site flows and treat flows prior to being discharged into the City's storm drainage system. Based on the foregoing analysis, the Project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality or result in potential discharge of stormwater to affect beneficial uses of receiving waters. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin)?

Summary of Certified SEIR Finding: The Certified SEIR concluded that future development would increase the amount of impermeable surfaces in the City and reduce the amount of permeable surfaces available for groundwater recharge. Most of the increase in impermeable surfaces in the City would result from development of the Ontario Ranch in accordance with land use designations in TOP 2050. Future urban development in Ontario Ranch would be served by domestic water provided by the City. Approximately 46 percent of the City's water supply is groundwater pumped by the City from the Chino Groundwater Basin; groundwater pumping is managed by OMUC so that domestic demands do not exceed the safe yield for the basin. With the implementation of City policies that promote Low Impact Development (LID) and infiltration for new development projects and compliance with the Chino Basin Watermaster's safe yield restrictions, the potential for the project to substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin would be less than significant. Therefore, TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: Water supply to the Project would be provided by OMUC and would not require the direct use of groundwater at the Project site. Therefore, the Project would not require direct additions or withdrawals of groundwater. Excavation that would result in the interception of existing aquifers or penetration of the existing water table is not proposed or anticipated. In addition, since the existing Project site is mostly impervious, the Project would not reduce any existing percolation of surface water into the groundwater table. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would?

i. Result in substantial erosion or siltation on- or off-site;

Summary of Certified SEIR Finding: The Certified SEIR concluded that future development associated with TOP 2050 would involve site improvements that require grading, excavation, and soil exposure during construction, with the potential for erosion or siltation to occur. If not controlled, the transport of these materials to local waterways could temporarily increase

suspended sediment concentrations and release pollutants attached to sediment particles. To minimize this impact, the project would be required to comply with the requirements in the State's CGP, including preparation of a notice of intent and SWPPP prior to the start of construction activities. In addition, the City of Ontario requires preparation of an erosion and sediment control plan and implementation of BMPs to control erosion, debris, and construction-related pollutants. For post-construction, projects approved under TOP 2050 would be required to control stormwater discharges under NPDES Permit through preparation of a WQMP identifying BMPs for reducing or eliminating runoff. Collectively, implementation of BMPs outlined in SWPPPs, erosion and sediment control plans, WQMPs, and TOP 2050 policies would address anticipated erosion and siltation impacts. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: Under existing conditions, the Project site does not contain a stream or river; therefore, the Project does not have the potential to alter the course of a stream or river. No impacts would occur in this regard. Refer to Response 10a. Project construction would temporarily expose on-site soils to surface water runoff. However, consistent with the findings of the Certified SEIR, compliance with construction-related BMPs and/or the SWPPP would control and minimize erosion and siltation, resulting in a less than significant impact. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

ii. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on or off-site;

Summary of Certified SEIR Finding: The Certified SEIR concluded that future development would increase the amount of impermeable surfaces in the City, which could result in future on- and off-site flooding. The City's standard conditions of approval for new development also require the preparation of hydrology studies and drainage analyses that document the peak runoff rates from the developed site and evaluate the capacity of the storm drain system to accept these flow rates. Additionally, TOP 2050 policies would direct the City to incorporate strategies to capture, slow, or treat run-off and to reduce the flooding potential down-gradient of new development. These policies would reduce the potential for on- and off-site flooding during the operational phase of future development projects. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site is currently developed; redevelopment of the site would not increase impervious surfaces. According to the Preliminary Hydrology Report prepared by Thienes Engineering, Inc., included as Appendix E.2, a storm drain system would be installed in both east and west side of the proposed building conveying the runoff southerly that ultimately drains to the existing 96-inch storm drain system located along East Jurupa Street. The westerly half of the site will drain from north to south via a proposed storm drain system that connects to an existing 27-inch storm drain downstream at Woodruff Way that ultimately discharge the existing storm drain system located along East Jurupa Street.

Runoff from the northeasterly area including the easterly half of the site will drain southwesterly to a series of catch basins and conveyed south via proposed storm drain line that connects to an existing 27-inch storm drain downstream south of the Project site. The northerly landscaped area adjacent to Wanamaker Avenue will sheet flow west to an existing street catch

basin northwest of the site. The remaining westerly landscaped area adjacent to South Rockefeller Avenue will drain east to an existing street catch basin at the intersection northeast of East Jurupa Street and South Rockefeller Avenue.

Moreover, the total 100-year peak flow rate tributary to the Project site at proposed condition is approximately 52.8 cfs, which is slightly less than the existing condition of 54.1 cfs. (Thienes, 2022b). Therefore, runoff discharge from the Project site would not have an adverse effect to the existing storm drain system downstream. The Project would not substantially increase the rate or amount of surface runoff in a manner which would result in flooding on or off-site. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

iii. Create or contribute runoff water which would exceed the capacity or existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff;

Summary of Certified SEIR Finding: The Certified SEIR concluded that projects considered for approval under TOP 2050 would be required to prepare project-specific hydrology and hydraulic studies as required by the City. In compliance with the MS4 Permit and San Bernardino County Stormwater Program, new development projects would also be mandated to install stormwater treatment BMPs that retain the 2-year, 24-hour rainfall event. Because new development in the City would be required to prepare a hydrology study and drainage analysis in accordance with the San Bernardino County Hydrology Manual, no significant impacts would occur. Therefore, TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: As stated above, according to the Project's Preliminary Hydrology Report, included as Appendix E.2, runoff from the implementation of the Project would be less compared to existing conditions. Accordingly, the Project would not create or contribute runoff that would exceed the capacity of any existing stormwater drainage system. Consistent with the finding of the Certified SEIR, stormwater generated by the Project will be discharged in compliance with the statewide NPDES General Construction Activities Stormwater Permit and San Bernardino County MS4 permit requirements. With the full implementation of a SWPPP developed in compliance with the General Construction Activities Permit requirements, the BMPs included in the SWPPP, and a stormwater monitoring program would reduce any impacts to below a level of significance. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

iv. Impede or redirect flood flows?

Summary of Certified SEIR Finding: The Certified SEIR concluded that only small portions of the City adjacent to flood control channels, detention basins, and creeks are in the 100-year floodplain. The western portion of Ontario Ranch is labeled Zone D—undetermined flood hazard—and no hazard analysis has been completed for this area. TOP 2050 include policies to reduce impacts of potential development within 100-year flood zones. Additionally, Chapter 13 of the Ontario Municipal Code requires that a development permit be obtained prior to development

in a special flood hazard area to ensure that the site is reasonably safe from flooding and flood hazards. With implementation of existing policies, the potential for the project to impede or redirect flood flows is considered less than significant. Therefore, TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: According to the Federal Emergency Management Agency (FEMA) flood map No. 06071C8641J, the Project site is located within Zone X, an area of minimal flood hazard (FEMA, 2016). Therefore, the Project would not impede or redirect flood flows and no impact would occur. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the western and southern portions of the City are in the dam inundation zone of San Antonio Dam. The probability of dam failure is very low, and Ontario has never been impacted by a major dam failure. In addition, dam owners are required to maintain emergency action plans that include procedures for damage assessment and emergency warnings. Because the likelihood of catastrophic failure of the San Antonio Dam is very low and the City has emergency action plan (EAP) notification procedures, impacts of release of pollutants due to dam inundation are considered less than significant. The City is inland and approximately 30 miles from the ocean and is not at risk of flooding due to tsunamis. Therefore, impacts associated with the release of pollutants due to inundation would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: As discussed above, the Project site is not in a FEMA flood zone. Additionally, consistent with the findings of the Certified SEIR, there are no large water bodies in the area that could impact the Project site and the Project site is outside of any tsunami hazard zone. Therefore, the Project would not result in a risk of pollutant release due to inundation from a flooding event, tsunami, or seiche zones. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the City's groundwater supplies are from the Chino Groundwater Basin, which is adjudicated and managed by the Chino Basin Watermaster. The Chino Basin is exempt from legislative requirements under the Sustainable Groundwater Management Act (SGMA) because it is an adjudicated basin and is not required to prepare a groundwater sustainability plan. As discussed above, implementation of the SWPPP, and adherence to the City's Erosion and Sediment Control Plan requirements would ensure that surface and groundwater quality are not adversely impacted during construction. Additionally, projects approved under TOP 2050 would be required to comply with the Santa Ana River Basin Plan and to control pollutants in discharges of stormwater from postconstruction activities under NPDES Permit. Therefore, implementation of TOP 2050 would not obstruct or

conflict with the RWQCB's Basin Plan or any groundwater management plan, and impacts would be less than significant. TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: As discussed under Response 10a, the Project site is within the Santa Ana River Basin; therefore, Project-related construction and operational activities would be required to comply with the Santa Ana RWQCB's Santa Ana River Basin Water Quality Control Plan by preparing and adhering to an SWPPP and WQMP. Additionally, as discussed previously, implementation of the Project would not conflict with or obstruct the Santa Ana River Basin Water Quality Control Plan.

The Project site is located within the Chino Groundwater Basin. Upon development, the Project site will be connected to the City's public water supply and there will be no onsite wells for use of groundwater. The City manages both the potable and non-potable supplies to ensure withdrawals from the Chino Groundwater Basin do not exceed the safe yield for the Basin, as per the Chino Basin Watermaster's Optimum Basin Management Program (OBMP). Therefore, the Project would not obstruct or conflict with the OBMP. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

11. LAND USE & PLANNING. Would the project:

a. Physically divide an established community?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the changes in land use that would occur upon the implementation of TOP 2050 Land Use Plan would not result in the physical division of an established community. The Land Use Element of TOP 2050 contains policies and programs that encourage the preservation or enhancement of the existing, primarily residential community through infill development, open space opportunities, and development of compatible uses that would reduce the amount of conflict between contradicting land uses and enhance the existing character of Ontario. TOP 2050 would avoid conflicting land uses and would not divide an established community. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site is located in an area that is currently developed with urban land uses. Existing industrial development borders the site to the north, south, west, and east. The Project Applicant would redevelop the site with industrial use with associated parking and landscaping improvements, consistent with the TOP 2050 land use plan. The Project will be of similar design and size to surrounding development. The Project would not have the potential to physically divide an established community. No adverse impacts are anticipated. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Summary of Certified SEIR Finding: The Certified SEIR concluded that TOP 2050 is consistent with the majority of Connect SoCal's goals. Additionally, the Airport Planning section of the TOP 2050 Land Use and Mobility Elements includes policies that would ensure airport planning compatibility and consistency. Therefore, TOP 2050 ensures compatibility with ONT and Chino Airport. Impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site is designated for Industrial by the TOP 2050 Land Use Plan. The Project Applicant would redevelop the Project site in accordance with the adopted land use designation. The Project would require a Specific Plan Amendment to the California Commerce Center Specific Plan (CCCSP) to change the land use designation of 8.4 acres of land from Commercial/Food/Hotel to Light Industrial. The Specific Plan Amendment would bring the land use under the CCCSP for the Project site into conformance with the TOP 2050 Land Use Plan, which lists the Project site as Industrial (0.55 FAR). Design standards applicable to the Light Industrial zone under the CCCSP would remain the same under the Project. The Project is consistent with the Policy Plan and does not interfere with any policies for environmental protection. As such, no impacts are anticipated. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

12. MINERAL RESOURCES. Would the project:

a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

Summary of Certified SEIR Finding: The Certified SEIR concluded that there are two areas in Ontario that are designated MRZ-2, where significant mineral resources are known or are likely. The remainder of the City is designated MRZ-3, where the significance of mineral deposits is unknown. Development in an MRZ-3 area would not result in significant impacts because mineral resources of statewide or local importance are not identified on the California Geological Survey's P-C maps. Implementation of TOP 2050 would not result in changes to the existing land use designation or existing conditions of the MRZ-2 areas. Therefore, TOP 2050 would not result in the loss of availability of a known mineral resource in Ontario, and impacts to mineral resources would be less than significant.

Discussion of Effects: The Project site is located within a mostly developed area surrounded by urban land uses. As shown in Figure 5.12-1 of the Ontario Plan 2050 Draft SEIR, the Project site is designated as MRZ-3 (City of Ontario, 2022b). As concluded in the TOP 2050 EIR, development in an MRZ-3 area would not result in significant impacts. Therefore, no impacts are anticipated. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

Summary of Certified SEIR Finding: As discussed above, the Certified SEIR concluded that implementation of TOP 2050 would not result in the loss of availability of a locally important mineral

resource recovery site. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: As discussed in Response 12a above, there are no known mineral resources in the area. The Project would not result in the loss of availability of locally-important mineral resources. No impacts are anticipated. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

13. NOISE. Would the project result in:

a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Summary of Certified SEIR Finding: The Certified SEIR concluded that construction activities associated with buildout of TOP 2050 would result in temporary noise increases at sensitive receptors. Mitigation Measure 12-4 would reduce potential impacts associated with construction from individual development projects to the extent feasible. However, due to the potential for proximity of construction activities to sensitive uses, the number of construction projects occurring simultaneously, and the potential duration of construction activities, construction activities could still result in a temporary substantial increase in noise levels above ambient conditions and exceedance of the 80 dBA Leq threshold. Therefore, construction noise impacts would remain significant and unavoidable. It should be noted that the identification of this program level impact does not preclude the finding of less-than-significant impacts for subsequent projects analyzed at the project level.

Moreover, TOP 2050 would not result in new type of stationary noise sources than those under TOP; therefore, stationary noise impacts would be less than significant. Additionally, traffic noise level increase would be below the significant threshold and TOP 2050 include policies that would minimize traffic noise impacts. Therefore, operational noise impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: A Project-specific Noise Assessment has been prepared by Urban Crossroads for the Project and is included as Appendix F. Redevelopment of the Project site with a new building and associated improvement has the potential to generate elevated noise levels during both near-term construction activities and under long-term operational conditions. Near-term (i.e., temporary) and long-term (i.e., permanent) noise level increases that would be associated with the Project are described below. To assess the potential short-term construction and long-term operational noise impacts, Urban Crossroads identified 5 representative noise-sensitive receiver locations at which the Project's anticipated noise generation was compared against as shown in Figure 9, *Receiver Locations*.

Figure 9: Receiver Locations

Construction Noise Impact

The Project's only potential to cause a substantial temporary or periodic increase in ambient noise levels would occur during the construction phase. Construction activities on the Project site, especially those involving the use of heavy equipment, would create intermittent, temporary increases in ambient noise However, although periodic and temporary construction noise has the potential to be substantial compared to existing ambient noise levels. The Project's construction-related activities are required to comply with the City's Noise Ordinance (Municipal Code Section 5-29.09).

The City of Ontario has set restrictions to control noise impacts associated with construction. Section 5-29.09 of the Municipal Code states: No person, while engaged in construction, remodeling, digging, grading, demolition or any other related building activity, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, on any weekday except between the hours of 7:00 a.m. and 6:00 p.m. or on Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m. While the City establishes limits to the hours during which construction activity may take place, it does not identify specific noise level limits for construction noise levels at potentially affected receiver locations for CEQA analysis purposes. Therefore, a numerical construction threshold of 80 decibels (dBA) equivalent sound level (L_{eq}) based on Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual is used for analysis of daytime construction impacts. As shown in Table 13-1, *Construction Noise Level Compliance*, the Project's construction-related noise at the off-site receiver locations will satisfy the 80 dBA L_{eq} significance threshold (Urban Crossroads, 2023b). Therefore, construction noise impacts would be less than significant.

Table 13-1 Construction Noise Level Compliance

Receiver Location[1]	Construction Noise Levels (dBA L_{eq})		
	Highest Construction Noise Levels[2]	Threshold[3]	Threshold Exceeded?[4]
R1	38.1	80	No
R2	42.1	80	No
R3	30.3	80	No
R4	35.5	80	No
R5	35.7	80	No

[1] Noise receiver locations are shown on Figure 9.
[2] Highest construction noise level calculations based on distance from the construction noise source activity to the nearest receiver locations as shown on Table 8-2 of the Noise Impact Analysis.
[3] Construction noise level thresholds as shown on Table 4-1 of the Noise Impact Analysis.
[4] Do the estimated Project construction noise levels exceed the construction noise level threshold?
Source: (Urban Crossroads, 2023b , Table 2)

Operational Noise Impact

Future users of the proposed Project are currently unknown. Therefore, this analysis presents worst-case scenario noise conditions for typical warehouse space activities, assuming that the Project would be operational 24-hours per day, 7 days per week. The Project's proposed business operations would primarily be conducted within the enclosed building, except for traffic movement, parking, and loading/unloading of trucks at designated loading bays. The on-site

Project-related noise-sources are anticipated to include loading dock activity, truck movements, roof-top, air-conditioning units, parking lot vehicle movements, and trash enclosure activity.

To estimate the Project's operational noise impacts, reference noise level measurements were collected from similar types of activities to represent the noise levels anticipated with the development of the Project. To demonstrate compliance with local noise regulations, the Project-only operational noise levels are evaluated against exterior noise level thresholds based on the City of Ontario exterior noise level standards at nearby noise-sensitive receiver locations. Section 5-29.04(a) identifies the allowable daytime and nighttime ambient exterior noise standards for each land use type. For residential land uses (Noise Zone I), ambient exterior noise levels may not exceed 65 dBA Leq during the daytime hours (7:00 a.m. to 10:00 p.m.) and may not exceed 45 dBA Leq during the nighttime hours (10:00 p.m. to 7:00 a.m.). Table 13-2, *Operational Noise Level Compliance*, shows the operational noise levels associated with the Project will satisfy the City of Ontario exterior noise level standards adjusted to reflect the ambient noise conditions (Urban Crossroads, 2023b). Therefore, operational noise impacts would be less than significant.

Table 13-2 Operational Noise Level Compliance

Receiver Location[1]	Project Operational Noise Levels (dBA L_{eq})[2]		Noise Level Standards (dBA L_{eq})[3]		Noise Level Standards Exceeded?[4]	
	Daytime	Nighttime	Daytime	Nighttime	Daytime	Nighttime
R1	21.9	21.8	65.0	71.9	No	No
R2	24.4	24.3	65.0	74.2	No	No
R3	20.1	20.1	65.0	66.8	No	No
R4	25.4	25.4	65.0	75.4	No	No
R5	25.5	25.5	65.0	76.0	No	No

[4] Do the estimated Project operational noise source activities exceed the noise level standards?
"Daytime" = 7:00 a.m. - 10:00 p.m.; "Nighttime" = 10:00 p.m. - 7:00 a.m.
Source: (Urban Crossroads, 2023b , Table 1)

Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required. The following mitigation measure from the Certified SEIR is applicable to the Project:

MM 12-4 Construction activities associated with new development that occurs near sensitive receptors shall be evaluated for potential noise impacts. Construction contractors shall implement the following measures for construction activities in the City of Ontario. Construction plans submitted to the City shall identify these measures on demolition, grading, and construction plans. The City of Ontario Planning and Building Departments shall verify that grading, demolition, and/or construction plans submitted include these notations prior to issuance of demolition, grading, and/or building permits.

- Construction activity is limited to the hours between 7:00 am and

6:00 pm Monday through Friday and 9:00 am to 6:00 pm Saturdays and Sundays, as prescribed in Municipal Code Section 5-29.09.

- During the entire active construction period, equipment and trucks used for project construction shall use the best-available noise control techniques wherever feasible (e.g., improved mufflers, equipment re-design, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds).

- Impact tools (e.g., jack hammers and hoe rams) shall be hydraulically or electrically powered wherever possible. Where the use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used along with external noise jackets on the tools.

- Stationary equipment such as generators and air compressors shall be located as far as feasible from nearby noise-sensitive uses.

- Stockpiling shall be located as far as feasible from nearby noise-sensitive receptors.

- Construction traffic shall be limited, to the extent feasible, to approved haul routes established by the City's Engineering Department.

- At least 10 days prior to the start of construction activities, a sign shall be posted at the entrance(s) to the job site, clearly visible to the public, that includes permitted construction days and hours as well as the telephone numbers of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise or vibration complaint. If the authorized contractor's representative receives a complaint, he/she shall investigate, take appropriate corrective action, and report the action to the City.

- Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to reinforce the prohibition of unnecessary engine idling. All other equipment shall be turned off if not in use for more than 5 minutes.

- During the entire active construction period and to the extent feasible, the use of noise producing signals, including horns, whistles, alarms, and bells, shall be for safety warning purposes only. The construction manager shall use smart back-up alarms, which automatically adjust the alarm level based on the background noise level or switch off back-up alarms and replace with human spotters in compliance with all safety requirements and laws.

- Erect temporary noise barriers (at least as high as the exhaust of equipment and breaking line-of-sight between noise sources and sensitive receptors), as necessary and feasible, to maintain construction noise levels at or below the performance standard of 80 dBA Leq. Barriers shall be constructed with a solid material that

has a density of at least 1.5 pounds per square foot with no gaps from the ground to the top of the barrier and may be lined on the construction side with an acoustical blanket, curtain, or equivalent absorptive material.

b. Generation of excessive groundborne vibration or groundborne noise levels?

Summary of Certified SEIR Finding: The Certified SEIR concluded that construction activity at projects within TOP 2050 plan area would generate varying degrees of ground vibration, depending on the construction procedures and equipment. TOP 2050 would have similar impacts as the TOP because specific project-level data for individual developments for TOP 2050 (such as construction equipment) are not available, and construction could generate excessive vibration levels at sensitive receptor locations. Vibration-related noise impacts during construction that would accommodate buildout of TOP 2050 would be potentially significant. Mitigation Measure 12-2 would reduce potential impacts associated with construction vibration from individual development projects to the extent feasible. However, due to the potential for proximity of construction activities to sensitive uses, the number of construction projects occurring simultaneously, and the potential duration of construction activities, impacts would remain significant and unavoidable and would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR. It should be noted that the identification of this program-level impact does not preclude the finding of less-than-significant impacts for subsequent projects analyzed at the project level.

Commercial and industrial operations would generate varying degrees of ground vibration, depending on the operational procedures and equipment. The Certified EIR found that the majority of industrial uses would not be immediately adjacent to vibration-sensitive uses, the use of heavy equipment associated with industrial activities would occur indoors, and no significant vibration impacts would occur from vibration generated by industrial uses. TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to that of TOP. Therefore, vibration impacts during operation would be less than significant and would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site was previously analyzed as industrial uses in the Certified SEIR. The Project would be developed consistent with the Industrial land use designation of the site as the site was analyzed in the Certified SEIR. As discussed above, the Project proposes a development of an approximately 344,110 s.f. logistics center. The proposed building would be approximately 54,791 s.f. less than the maximum allowed under TOP 2050. As concluded in the Certified SEIR, industrial uses do not normally induce significant groundborne vibrations because they do not typically involve equipment or activities which result in large vibrations. Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

Summary of Certified SEIR Finding: The Certified SEIR concluded that implementation of TOP 2050 could expose noise sensitive uses to excessive noise levels from the Ontario International Airport. With the implementation of Mitigation Measure 12-1, impacts to future sensitive receptors

from excessive airport-related noise would be reduced to interior noise levels of 45 dBA CNEL or less. While interior noise levels are required to achieve the interior noise limits of Title 24 and Title 25, exterior noise levels may continue to exceed the noise compatibility criteria for the City. Consequently, airport noise compatibility impacts would remain significant and unavoidable, and would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: According to the Ontario International Airport (ONT) Land Use Compatibility Plan (ALUCP), the Project site is located within the ONT Airport Influence Area (City of Ontario, 2011). Moreover, the Project site is located within the 65-70 CNEL noise impact zone and is subject to the Noise Criteria established on Table 2-3 in the ONT ALUCP. According to Table 2-3 of the ONT ALUCP, the Project's industrial warehouse is considered normally compatible land use with exterior noise levels ranging from 65-70 dBA CNEL. For normally compatible land use, activities associated with the land use may be carried out with minimal interference from aircraft noise. Moreover, as discussed under Response 13a, the Project would not result in a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established. Therefore, the Project would not expose people residing or working in the project area to excessive noise levels and impacts would be less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

14. POPULATION & HOUSING. Would the project:

a. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?

Summary of Certified SEIR Finding: The Certified SEIR concluded that implementation of TOP 2050 accommodates population growth through land use designations, goals, and policies that provide a vision and guide growth in the City. TOP 2050 would increase population, dwelling units, and nonresidential buildings but would result in a small decrease in employment. Although the increase in population, housing, and employment under TOP 2050 would exceed SCAG's regional forecasts for the City of Ontario, TOP 2050 would improve the job-housing balance. Consequently, impacts would be less than significant, and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project would result in the development of an approximately 344,110 s.f. warehouse facility and does not include a residential component. Based on the Southern California Association of Governments' (SCAG) Employment Density Study of 1 employee per 1,195 square feet for warehouse use, the Project would generate approximately 288 direct jobs. According to the California Employment Development Department (EDD), as of March 2023, the City of Ontario has a labor force of 93,500 persons and of that labor force, 3,800 are unemployed (unemployment rate of 4.1 percent) (EDD, 2023). According to SCAG's 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy, the City of Ontario is anticipated to employ approximately 169,300 persons by 2045 (SCAG, 2020). Additionally, the TOP 2050 projected 296,002 employees in 2050. Therefore, the Project is consistent with both the SCAG's 2045 and TOP 2050 employment projections for the City. Project-generated jobs are well within the employment projections for the City of Ontario. Operation of the Project would not induce substantial unplanned population growth in the Project area, either directly or indirectly

and would not exceed regional or local growth projections. Therefore, no impacts are anticipated. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

Summary of Certified SEIR Finding: The Certified SEIR concluded that land use changes under TOP 2050 would increase opportunities for housing in the City—for example, by converting shopping centers to mixed-use and increasing residential density in existing residential areas and religious properties. The TOP 2050 Land Use Plan would provide land use designations for a variety of housing types and provide for additional residential opportunities throughout Ontario. TOP 2050 includes the following policies supporting an increase in the provision of housing and diversity of housing opportunities in the City. Therefore, impacts would be less than significant and would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site does not contain any housing and there are no people living at the Project site that would be displaced by the Project. Therefore, no impacts are anticipated. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

15. PUBLIC SERVICES. Would the project:

a. Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

i. Fire protection?

Summary of Certified SEIR Finding: Fire prevention services are provided by the Ontario Fire Department (OFD). The Certified SEIR concluded that based on correspondence with the OFD, existing conditions would not be adequate to meet such increased demands from the implementation of TOP 2050. The OFD's recommendation is that three additional fire stations would be needed in the Ontario Ranch to meet projected needs. While the construction of future facilities could result in potential environmental impacts, future environmental review would occur once specific locations have been determined. Without a definitive location for the development of future facilities, the analysis of potential impacts is too speculative to conduct. Future projects would be reviewed by the City and the OFD on an individual basis and would be required to comply with requirements in effect at the time building permits are issued, including the payment of development impact fees (DIF) that contribute to funding for additional staffing, facilities, and equipment. Therefore, impacts to fire protection services would be less than significant and implementation of TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project Applicant would develop the Project site in accordance with TOP 2050 land use plan. Accordingly, the development activities proposed by the Project were planned by TOP 2050 and, thus, the Project's demand for fire protection services was anticipated by the Certified SEIR. Additionally, the Project site is not located within the Ontario Ranch area. The proposed building would be in accordance with the applicable provisions of the adopted California Fire Code (CFC) and the City's Municipal Code Section 4-4.01, ordinances, and standard conditions regarding fire prevention and suppression measures related to water improvement plans, fire hydrants, fire access, and water availability. The Project will not require the construction of any new fire protection facilities or alteration of any existing fire protection facilities or cause a decline in the levels of service, which could cause the need to construct new fire protection facilities. Consistent with the findings of the Certified SEIR, DIF would also be collected in order to build and supply necessary infrastructure for fire protection services, as necessary. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

ii. Police protection?

Summary of Certified SEIR Finding: Police protection services are provided by the Ontario Police Department (OPD). The Certified SEIR concluded that according to correspondence with the OPD as part of this project, the OPD currently has enough staffing to meet current demands but would require additional staffing as population increases to accommodate buildout of TOP 2050. There are current plans for adding a substation in Downtown Ontario and Ontario Ranch. While the construction of future facilities could result in potential environmental impacts, future environmental review would occur once specific locations have been determined. Without a definitive location for the development of future facilities, the analysis of potential impacts is too speculative to conduct. Future development would also be subject to development impact fees which pay for police services. Therefore, impacts to police protection services would be less than significant and implementation of TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project Applicant would develop the Project site in accordance with TOP 2050 land use plan. Accordingly, the development activities proposed by the Project were planned by TOP 2050 and, thus, the Project's demand for police protection services was anticipated by the Certified SEIR. Additionally, the Project is not located within the Downtown Ontario and Ontario Ranch areas. The Project plans would be reviewed and approved by the City's Building and Police Departments, which would ensure that adequate safety and crime prevention measures are provided within the Project's design. The Project will not require the construction of any new police protection facilities or alteration of any existing police protection facilities or cause a decline in the levels of service, which could cause the need to construct new police protection facilities. Consistent with the findings of the Certified SEIR, DIF would also be collected in order to build and supply necessary infrastructure for police protection services, as necessary. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

iii. Schools?

Summary of Certified SEIR Finding: As part of the development of the Certified SEIR, the City reached out to the five school districts that serve residents of Ontario to obtain existing conditions information and information on potential impacts. Current enrollment for all three of these school districts is below capacity and the capacity of the schools in addition to any already planned construction projects would be able to accommodate the increased population due to the implementation of TOP 2050. However, it is possible that Ontario-Montclair School District and Cucamonga School District would need additional facilities. Developers would be required to pay the impact fees levied by each school district, set within the limits of SB 50. The Certified SEIR concluded that although the increased demand on school facilities would have the potential to impact one or more of the school districts that serve Ontario, payment of impact fees in compliance with SB 50 would reduce the impacts to an acceptable level. Therefore, impacts to school services would be less than significant and implementation of TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site is within the school boundary of the Cucamonga School District. The Project Applicant proposes to demolish the existing industrial buildings and redevelop the site with a single industrial building. Implementation of the Project does not have the potential to result in substantial direct growth in the population, nor an increase in student population. The Project Applicant would develop the Project site in accordance with TOP 2050 land use plan and, thus, the Project's indirect demand for public school services was anticipated by the Certified SEIR. The Project would be required to pay school fees as prescribed by state law prior to the issuance of building permits. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

iv. Parks?

Summary of Certified SEIR Finding: Park service were discussed under the Recreation section of the Certified SEIR. The Certified SEIR concluded that impacts to recreation would be less than significant and implementation of TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR. Details on the summary findings are discussed below in Section 16.

Discussion of Effects: The Project would develop the Project site in accordance with TOP 2050 land use plan and would not introduce new residents to the City necessitating the need for additional parks. The Project will not require the construction of any new parks or alteration of any existing parks or cause a decline in the levels of service, which could cause the need to construct new park facilities. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

v. Other public facilities?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the Ontario library system is currently not meeting the goal of 0.6 square feet of library facilities per capita. Buildout of TOP 2050 would result in an increase in demand for library services in the City of Ontario based

on an increase in population. Environmental impacts could result from the construction of future facilities; however, the location and size of potential future facilities is currently unknown, and each project would have to complete applicable environmental review under CEQA when it is determined. Future projects would be reviewed by the City of Ontario on an individual basis and would be required to comply with requirements in effect at the time building permits are issued (i.e., payment of development impact fees). Since adequate services would be provided and payment of development impact fees would offset the costs associated with library services, impacts on library services would be less than significant. Therefore, implementation of TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project would develop the Project site in accordance with TOP 2050 land use and would not introduce new residents to the City necessitating the need for additional public facilities. The Project will not require the construction of any new public facilities or alteration of any existing public facilities or cause a decline in the levels of service, which could cause the need to construct new public facilities. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

16. RECREATION. Would the project:

a. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Summary of Certified SEIR Finding: The Certified SEIR concluded that future growth in the City in accordance with buildout of TOP 2050 would increase the demand for parks and increase existing park usage. TOP 2050 would designate approximately 900 acres for recreational uses under the Open Space – Recreation (OS-R) land use designation. Additionally, new development in Ontario Ranch provides an additional two acres per 1,000 residents for private parks in addition to the City's three acres per 1,000 residents for public parks. There are also at least 180 acres of regional recreational facilities, joint-use agreements with school districts, and private recreational opportunities providing services that cannot be accommodated by existing facilities. As a result, development of park facilities would keep pace with the anticipated increase in population from buildout of TOP 2050. Therefore, impacts would be less than significant and implementation of TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project would develop the Project site in accordance with the TOP 2050 land use plan. Accordingly, the development activities proposed by the Project were planned by TOP 2050 and, thus, the Project's indirect demand for parks was anticipated by the Certified SEIR. The Project is not proposing any significant new housing or large employment generator that would cause an increase in the use of neighborhood parks or other recreational facilities. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Does the project include recreational facilities or require the construction or expansion of

recreational facilities that have an adverse physical effect on the environment?

Summary of Certified SEIR Finding: The Certified SEIR concluded that TOP 2050 includes planned park facilities; however, it is speculative to determine the location of proposed park facilities in the City and impacts arising from development of individual park projects. Existing federal, state, and local regulations as well as goals, policies, and actions in TOP 2050 would mitigate potential adverse impacts to the environment that may result from buildout of TOP 2050, including expansion of parks, recreational facilities, and multiuse trails. Furthermore, subsequent environmental review would be required for development of park projects under the TOP 2050 Land Use Plan. Therefore, impacts would be less than significant and implementation of TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project does not include recreational facilities or require the construction or expansion of recreational facilities. Implementation of the Project would not result in any adverse physical effects on the environment due to the construction of recreational facilities. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

17. TRANSPORTATION/TRAFFIC. Would the project:

a. Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?

Summary of Certified SEIR Finding: The Certified SEIR concluded that TOP 2050 includes policies to encourage and provide access to the regional transit network, to enhance connectivity to the City's nonmotorized transportation network, and proposes the changes to the Mobility Element that have the potential to affect infrastructure projects identified in the Regional Transportation Plan. Therefore, TOP 2050 would not conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities and implementation of TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects:

Project Trip Generation

Trip generation represents the amount of traffic that is attracted to and produced by a development project. The Institute of Transportation Engineers (ITE) Trip Generation Manual (2021) includes a trip generation rate for high-cube fulfillment center warehouse uses (ITE land use code 155) and high-cube cold storage warehouse uses (ITE land use code 157). According to the Project's Trip Generation Assessment, included as Appendix G.1, the Project is evaluated as a mix of the following uses: 85% high-cube fulfillment center warehouse and 15% high-cube cold storage warehouse. Based on the assumptions described above, the Project is anticipated to generate a total of 812 two-way trips per day with 62 Passenger Car Equivalent (PCE) AM peak hour trips and 59 PCE PM peak hour trips. However, when accounting for existing conditions, the Project is anticipated to generate 770 fewer two-way trips per day with 79 fewer AM peak hour trips and 68 fewer PM peak hour trips in comparison to the existing uses (in PCE). Per the City's Guidelines, the trip generation comparison is based on PCE as the existing and proposed uses are truck-intensive

uses and any operations analysis performed (if necessary) would utilize PCE values. Additionally, when comparing to the maximum allowed under TOP 2050, the Project is anticipated to generate 1,288 fewer two-way trips per day with 239 fewer AM peak hour trips and 206 fewer PM peak hour trips.

The City of Ontario adheres to the County's Transportation Impact Study Guidelines which has been used to determine whether additional traffic analysis is necessary for the proposed Project. The County's Guidelines indicates that development projects that generate a net increase of 100 or more peak hour vehicle trips (without pass-by reductions) would require the preparation and submittal of a Transportation Impact Analysis. The Project is anticipated to generate fewer than 50 net new peak hour trips during the morning and evening peak hours. The Project on its own, without taking any credit for existing uses, also generates fewer than 100 new peak hour trips (both in actual vehicles and PCE). Lastly, the proposed Project uses are anticipated to generate fewer trips than the adopted TOP 2050 land use (Industrial). As such, additional peak hour traffic operations analysis is not necessary based on the thresholds and standards included in the County's Guidelines (Urban Crossroads, 2022c). Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Bicycle and Pedestrian Facilities

The Project site is not located along a bikeway. The closest bikeway to the Project site is located at East Inland Empire Boulevard. The Project would be confined to the Project site and would not conflict within the existing bikeways. In addition, the Project would provide bike racks to accommodate bicycle access to the Project stie.

The Project site features (buildings, parking areas, etc.) would be connected by ADA compliant sidewalks and striped crosswalks within the parking areas to the existing ensure pedestrian access throughout Project site. Additionally, the Project would install sidewalk on South Rockefeller Avenue, Woodruff Way, and Wanamaker Avenue. Implementation of the Project would not interfere with the City's Active Transportation Plan. No impacts would occur.

Transit

Transit service to the City is provided by OmniTrans. The closest bus route to the Project site is Route 82 with a bus stop located at the intersection of South Rockefeller Avenue and East Jurupa Street, approximately 0.07 mile south of the Project site. The City of Ontario strives to provide a transit system that serves as a viable alternative to automobile travel. The Project would support transit use by improving existing pedestrian and bicycle facilities in the Project area. The Project would not introduce new features to any public road that would affect transit in the Project area. As such, a less than significant impact would occur.

As demonstrated, the Project would not conflict with the City's Mobility Element, and impacts associated with conflict of an applicable program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities would be less than significant. Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?

Summary of Certified SEIR Finding: The Certified SEIR concluded that there is a net increase in citywide Boundary VMT primarily due to the increase in population accommodated by TOP 2050. Mitigation Measure T-1 would reduce potential impacts for future development projects to the extent feasible. Future development projects consistent with TOP 2050 would need to consider transportation demand management (TDM) measures consistent with those identified in the Mobility Element. TDM techniques include incentives to use transit; incentives to form carpools rather than drive alone; and making home, work, and shopping closer together to shorten travel distances. Because the VMT impact is citywide, mitigation measures to reduce VMT would need to focus on changing or improving the citywide travel patterns, transportation network, or infrastructure. Given the uncertainty of the effectiveness of implementing these types of mitigation measures at a citywide level and of their effectiveness at reducing citywide VMT, VMT impacts would remain significant and unavoidable.

Discussion of Effects: The City Guidelines lists standardized screening methods for project level VMT analysis that can be used to identify when a proposed land use development project is anticipated to result in a less than significant impact, thereby eliminating the need to conduct a full VMT analysis. The City of Ontario VMT screening criteria, as described within the City Guidelines, are listed below:

- Transit Priority Area (TPA) Screening
- Low VMT Area Screening
- Project Type Screening

A land use project need only meet one of the above screening criteria to result in a less than significant impact.

TPA Screening

Consistent with guidance identified in the City Guidelines, projects located within a Transit Priority Area (TPA) (i.e., within ½ mile of an existing "major transit stop" or an existing stop along a "high-quality transit corridor"[1]) may be presumed to have a less than significant impact absent substantial evidence to the contrary. However, the presumption may not be appropriate if a project:

- Has a Floor Area Ratio (FAR) of less than 0.75;
- Includes more parking for use by residents, customers, or employees of the project than required by the jurisdiction (if the jurisdiction requires the project to supply parking);
- Is inconsistent with the applicable Sustainable Communities Strategy (as determined by the lead agency, with input from the Metropolitan Planning Organization); or
- Replaces affordable residential units with a smaller number of moderate or high-income residential units.

[1] Pub. Resources Code, § 21155 ("For purposes of this section, a high-quality transit corridor means a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.").

Based on the secondary criteria outlined in the City Guidelines, the Project does not meet the secondary criteria of having an FAR at or above 0.75, regardless of the Project being physically located in a TPA.

Low VMT Area Screening

City Guidelines state that projects may be presumed to have a less than significant VMT impact if located in an already low VMT generating traffic analysis zone (TAZ). City Guidelines recognize low VMT areas as those that generate a VMT per service population (i.e., population and employment) that is 15% below County of San Bernardino Baseline VMT per service population. The San Bernardino Transportation Analysis Model (SBTAM) is used to measure VMT performance in individual TAZs within the region. The Project's physical location was identified in the SBTAM model to determine the TAZ where the Project is located. The Project TAZ 53687401 is then calculated using Origin-Destination (OD) trip matrices to obtain total OD VMT. The resulting total OD VMT is divided by the Project TAZ's service population. The Project TAZ 53687401 has a VMT per service population of 55.8, which was compared to 15% below County of San Bernardino baseline or 28.41 VMT per service population (33.42 x 0.85= 28.41). As a result, the Project is not located within a low VMT generating zone. Therefore, the Project would not meet the Low VMT Area Screening threshold.

Project Type Screening

The City Guidelines identify that local serving retail less than 50,000 square feet or other local serving essential services (e.g., day care centers, public schools, medical/dental office buildings, etc.) are presumed to have a less than significant impact absent substantial evidence to the contrary. The Project as intended does not contain any local serving uses. Additionally, the City Guidelines state that small projects generating fewer than 110 daily vehicle trips or less may be presumed to have a less than significant impact. The Project is anticipated to generate 899 fewer two-way trips per day as compared to the existing use and 1,302 fewer two-way trips per day as compared to the adopted TOP 2050 in actual vehicles. Therefore, the Project's estimated trips will not exceed the City's 110 net new daily vehicle trip threshold and the Project would meet the Project Type Screening threshold. (Urban Crossroads, 2023d)

The Project VMT impact would be less than significant and would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

c. Substantially increase hazards due to a geometric design feature (e. g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Summary of Certified SEIR Finding: The Certified SEIR concluded that majority of the population growth associated with TOP 2050 would occur in Ontario Ranch and there are substantial improvements in transportation infrastructure planned to accommodate the increase in population in the City in the event of an emergency. Additionally, the City has adopted roadway classification standards in Policy M-1.1 that include roadway design standards as part of TOP 2050, precluding the construction of any unsafe features. Therefore, impacts would be less than significant and implementation of TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project's potential to increase hazards as a result of a geometric design feature has been assessed to provide adequate truck access/circulation. The Project's circulation plan has been designed to be compatible with all foreseeable vehicles. Vehicular access will be provided via 5 driveways on Wanamaker Avenue, South Rockefeller Avenue, and Woodruff Way. The driveway on Woodruff Way would be restricted to truck only and the northern driveway on South Rockefeller Avenue and western driveway on Wanamaker Avenue would be restricted to passenger vehicles only. The driveways on Wanamaker Avenue, South Rockefeller Avenue, and Woodruff Way for trucks are 40 feet wide and designed to accommodate the wide turning radius of the heavy trucks. Additionally, the Project proposes to modified Woodruff Way to a cul-de-sac and it would no longer be connected to Wanamaker Avenue. As a result of the vacation, vehicles previously using Woodruff Way to access Wanamaker Avenue will be using Jurupa Street to Rockefeller Avenue. Redistribution of trips is not expected to result in an increase of hazards as the existing and future westbound right turn volume at the intersection of Rockefeller Avenue and Jurupa Street is less than 300 vehicles per hour during the peak hours. (Urban Crossroads, 2023e)

The Project area is generally characterized by industrial uses. Traffic generated by the Project would be typical of a warehouse and be compatible with the type of traffic generated by the existing and surrounding development. In addition, all proposed improvements within the public right-of-way would be installed in conformance with City design standards. The City of Ontario Engineering Department reviewed the Project's application materials and determined that no hazardous transportation design features would be introduced by the Project. At the time of final grading, landscape, and street improvement plans, the City will further review project access points to ensure adequate sight distance. Accordingly, the Project would not create or substantially increase safety hazards due to a design feature or incompatible use and impacts would be a less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

d. Result in inadequate emergency access?

Summary of Certified SEIR Finding: The Certified SEIR concluded that a review of emergency access is included as part of the City's Design Review process. According to the City's Local Hazard Mitigation Plan, interstate highways would serve as major emergency response and evacuation routes. Additionally, the Ontario Fire Department reviews development applications to ensure that adequate emergency accessibility is provided based on local and state guidance. Therefore, impacts would be less than significant and implementation of TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project will be designed to provide access for all emergency vehicles and meet all applicable City of Ontario Fire and Police Department access requirements to ensure that adequate access would be provided for emergency vehicles at Project build out. During construction activities that include road and sidewalk improvements, the Project would provide adequate emergency access along abutting roadways during temporary construction activities within the public right-of-way. As concluded in the Certified SEIR, the Ontario Fire Department reviews development applications to ensure that adequate emergency accessibility is provided based on local and state guidance. As a result, the Project would not a less than significant impact to emergency access. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

18. TRIBAL CULTURAL RESOURCES. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

Summary of Certified SEIR Finding: The Certified SEIR concluded that result of the Sacred Lands File (SLF) check conducted through the Native American Heritage Commission (NAHC) was negative. In accordance with AB 52 and SB 18 requirements, the City sent invitation letters to the Native American contacts provided by the NAHC. Grading and construction activities in undeveloped areas or redevelopment that requires deeper soil excavation than in the past have the potential to disturb tribal cultural resources. Mitigation Measures 5-3 and 5-4 and new Mitigation Measures TCR-1 and TCR-2 would reduce potential impacts associated with tribal cultural resources to a level that is less than significant. Therefore, no significant unavoidable adverse impacts relating to tribal cultural resources remain.

a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?

Discussion of Effects: As analyzed in Response 5.a, there are no resources on the Project site that are eligible for listing in the California Register of Historical Resources or in a local register of historical resources as defined by Public Resources Code Section 5020.1(k). Implementation of the Project would not result in a substantial adverse change in the significance of a listed historical resource. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision(c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision(c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

Discussion of Effects: As discussed in Response 5.a, no resources were recorded in the Project site or within one mile of the Project site. However, since the Project would require excavation for construction into previously undisturbed soils, there is a potential to uncover undiscovered prehistoric artifacts or tribal cultural resources during excavation. Therefore, while unlikely, the presence of subsurface tribal cultural resources on the Project site remains possible, and these could be affected by ground-disturbing activities associated with grading and construction at the Project site. As a result, consistent with the findings of the Certified SEIR, implementation of Mitigation Measures 5-3, 5-4, TCR-1, and TCR-2 would ensure preclude potential impacts to tribal cultural resources as defined in Public Resources Code 5024.1(c). Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required. The following mitigation measure from the Certified SEIR is applicable to the Project:

MM 5-2 Upon receipt of an application for a proposed project subject to CEQA and within the City's jurisdiction, the City's representative shall consult with the relevant tribe(s)' representative(s) to determine if the proposed project is within a culturally sensitive area to the tribe. If sufficient evidence is provided to reasonably ascertain that the site is within a tribal culturally sensitive area, an archaeologist shall prepare then a cultural resources assessment. The findings of the cultural resources assessment shall be incorporated into the CEQA documentation. A copy of the report shall be forwarded to the tribe(s). If mitigation is recommended in the CEQA document, the procedure described in Mitigation Measure 5-4 shall be followed.

MM 5-4 Prior to the issuance of grading permits for a proposed project for which the CEQA document defines cultural resource mitigation for potential tribal resources, the project applicant shall contact the designated tribe(s) to notify them of the grading, excavation, and monitoring program. The applicant shall coordinate with the City of Ontario and the tribal representative(s) to develop mitigation measures that address the designation, responsibilities, and participation of tribal monitors during grading, excavation, and ground-disturbing activities; scheduling; terms of compensation; and treatment and final disposition of any cultural resources, sacred sites, and human remains discovered on the site. The City of Ontario shall be the final arbiter of the conditions for projects within the City's jurisdiction.

TCR-1 Tribal Cultural Resources Monitoring. The project archaeologist, in consultation with interested tribes, the developer, and the City of Ontario, shall develop an archaeological monitoring plan (AMP) to address the details, timing, and responsibility of archaeological and cultural activities that will occur on the project site. Details in the AMP shall include:

1. Project-related ground disturbance (including, but not limited to, brush clearing, grading, trenching, etc.) and development scheduling;

2. The development of a rotating or simultaneous schedule in coordination with the developer and the project archeologist for designated Native American Tribal Monitors from the consulting tribes during grading, excavation and ground disturbing activities on the site: including the scheduling, safety requirements, duties, scope of work, and Native American Tribal Monitors' authority to stop and redirect grading activities in coordination with all project archaeologists (if the tribes cannot come to an agreement on the rotating or simultaneous schedule of tribal monitoring, the Native American Heritage Commission shall designate the schedule for the onsite Native American Tribal Monitor for the proposed project);

3. The protocols and stipulations that the developer, City, Tribes, and project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resource's evaluation.

At least 30 days prior to application for a grading permit and before any

brush clearance, grading, excavation, and/or ground disturbing activities on the site, the developer shall retain a tribal cultural monitor to monitor all ground-disturbing activities in an effort to identify any unknown archaeological resources.

Pursuant to the AMP, a tribal monitor from the consulting tribe shall be present during the initial grading activities. If tribal resources are found during grubbing activities, the tribal monitoring shall be present during site grading activities.

TCR-2 Treatment and Disposition of Cultural Resources. In the event that Native American cultural resources are inadvertently discovered during the course of any ground-disturbing activities, including but not limited to brush clearance, grading, trenching, etc., for the proposed project, the following procedures will be carried out for treatment and disposition of the discoveries:

1. Temporary Curation and Storage: During the course of construction, all discovered resources shall be temporarily curated in a secure location on-site or at the offices of the project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversight of the process;

2. Treatment and Final Disposition: The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and nonhuman remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City of Ontario with evidence of same:

    a. Accommodate the process for on-site reburial of the discovered items with the consulting Native American tribes or bands. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloging, basic analysis, other analyses as recommended by the project archaeologist and approved by consulting tribes, and basic recordation have been completed; all documentation should be at a level of standard professional practice to allow the writing of a report of professional quality;

    b. A curation agreement with an appropriate qualified repository in San Bernardino County that meets federal standards per 36 CFR Part 79, and therefore the resource would be professionally curated and made available to other archaeologists/researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility in San Bernardino County, to be accompanied by payment of the fees necessary for permanent curation;

    c. For purposes of conflict resolution, if more than one Native American tribe or band is involved with the project and cannot come to an agreement as to the disposition of cultural materials,

materials shall be curated at the San Bernardino County Museum by default;

d. At the completion of grading, excavation, and ground-disturbing activities on the site, a Phase IV Monitoring Report shall be submitted to the City documenting monitoring activities conducted by the project archaeologist and Native Tribal Monitors within 60 days of completion of grading. This report shall document the impacts to the known resources on the property; describe how each mitigation measure was fulfilled; document the type of cultural resources recovered and the disposition of such resources; provide evidence of the required cultural sensitivity training for the construction staff held during the required pregrade meeting; and, in a confidential appendix, include the daily/weekly monitoring notes from the archaeologist. All reports produced will be submitted to the City, County Museum, and consulting tribes.

2. UTILITIES AND SERVICE SYSTEMS. Would the project:

a. Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Summary of Certified SEIR Finding: The Certified SEIR concluded that TOP 2050 would result in an overall increase in the number of residential dwellings and nonresidential square footage. The TOP 2050 has policies in place to require improvements to sewer infrastructure as part of new development and redevelopment projects and has processes in place to ensure that any sewer improvement projects are implemented prior to or during new development. With funding from sewer connection/usage fees and the Capital Improvements Program (CIP) budget, the City would continue to expand and improve the sewer infrastructure to accommodate new development and future growth. Therefore, there would be no significant impacts on wastewater infrastructure.

Due to the increase in demand for potable and recycled water, the City and the IEUA have made plans for infrastructure expansion and improvement. As part of the land development approval process, the City determines a project's fair-share costs and connection fees. Through the use of connection fees and agreements, the City maintains and expands its water distribution system as necessary and is able to ensure that new developments pay their fair-share costs. Therefore, impacts related to water infrastructure expansion and improvement caused by the implementation of TOP 2050 would be less than significant.

Potential future development and the change in land uses could result in an increase in impervious surfaces. Future developments would be required to comply with the City's storm drain policies and the MS4 permit, which would require the preparation of hydrology reports and drainage plans for review and approval by the City to ensure that there are no adverse impacts to the City's storm drain system. Also, the developers would need to prepare a WQMP that addresses stormwater runoff and requires the construction of stormwater treatment facilities for temporary on-site retention of stormwater runoff. These requirements would minimize the amount of stormwater runoff from potential future development. Compliance with the City's policies and programs that ensure adequate infrastructure and the regulatory provisions in the MS4 permit that limit runoff from new development would ensure that implementation of TOP 2050 would not result in significant increases in runoff that would contribute to the construction or expansion of new

storm drains beyond what is already planned. Therefore, impacts with respect to stormwater infrastructure would be less than significant.

Discussion of Effects:

Water and Wastewater

The Project would include the installation of water and wastewater lines within the Project site. Water would be accommodated via proposed water lines that would extend from the northeastern corner of the building to an existing 12-inch water main on Wanamaker Avenue. Additionally, portion (from the Project's driveway on Woodruff Way to the proposed fire line along the northern side of the proposed building) of the existing 12-inch water main along Woodruff Way would be removed. Sewer would be accommodated via proposed sewer lines that would extend from the northwestern and northeastern corners of the building to an existing 8-inch sewer main on Woodruff Way at the Project's driveway. Additionally, portion of the existing 8-inch sewer main on Woodruff Way that run through the proposed building would be removed.

Although the Project would result in new water and wastewater line connections, these connections would occur on-site and would be part of the Project's construction phase, which is evaluated throughout this Addendum. The construction of the Project's water and wastewater lines necessary to serve the Project would not result in any significant physical effects on the environment that are not already identified and disclosed as part of this Addendum. Impacts would be less than significant.

Stormwater Drainage

A storm drain system would be installed in both east and west side of the proposed building conveying the runoff southerly that ultimately drains to the existing 96-inch storm drain system located along East Jurupa Street. The westerly half of the site will drain from north to south via a proposed storm drain system that connects to an existing 27-inch storm drain downstream at Woodruff Way that ultimately discharge the existing storm drain system located along East Jurupa Street.

Runoff from the northeasterly area including the easterly half of the site will drain southwesterly to a series of catch basins and conveyed south via proposed storm drain line that connects to an existing 27-inch storm drain downstream south of the Project site. The northerly landscaped area adjacent to Wanamaker Avenue will sheet flow west to an existing street catch basin northwest of the site. The remaining westerly landscaped area adjacent to South Rockefeller Avenue will drain east to an existing street catch basin at the intersection northeast of East Jurupa Street and South Rockefeller Avenue.

Refer to the analysis under Section 10, Hydrology and Water Quality, Threshold c.ii, above. As discussed, stormwater runoff would be treated on site and would not require relocation or construction of new or expanded storm water drainage infrastructure which could cause significant environmental effects. Impacts would be less than significant.

Dry Utilities

Electricity will be provided by the Southern California Edison. Additionally, two fiber optic lines will be constructed: one from the western boundary of the Project site to the existing handhole at South Rockefeller Avenue with two handholes at the northern and southern ends and one along the northern boundary of the Project site to the with two handhole in the middle and

at the eastern end. Connections to the existing utility networks are available in the Project area and any offsite improvements would occur within improved rights-of-way, which are inherent to the Project's construction phase and have been evaluated throughout this Addendum. Because the Project site has been previously developed with commercial uses that requires electric power and telecommunication services, implementation of the Project is not anticipated to limit the ability of service providers to provide service to Project. Therefore, the Project would not require or result in the construction or expansion of new facilities, and impacts would be less than significant.

Based on the preceding, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

Summary of Certified SEIR Finding: The Certified SEIR concluded that total water demand associated with TOP 2050 would result in an increase of approximately 6 percent compared to the 2020 Urban Water Management Plan (UWMP). The 2020 UWMP states that there are sufficient water supplies through 2045 to meet projected demands in normal years, single dry years, and multiple dry years through 2045. Although TOP 2050 at buildout is estimated to generate a 6 percent increase in water demand using conservative water demand factors, new State requirements and City policies and code requirements would result in enhanced water efficiency and conservation. Applying these measures would result in total water demand below the projections in the 2020 UWMP for year 2045. Therefore, there would be sufficient water supplies to meet the demand for TOP 2050 buildout. Impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: OMUC is responsible for supplying potable water to the Project site. The UWMP includes an analysis of water supply reliability projected through 2045 under normal years, single dry year, and multiple dry years. OMUC's total water demand for 2020 was approximately 32,109 AF (OMUC, 2021). As stated above, the City is anticipated to have adequate water supplies to meet all its demands from the implementation of TOP 2050 at buildout until the year 2045 under a normal year, single dry year, and multiple dry years. The Project Applicant would demolish the existing structures and redevelop the site with an approximately 344,110 s.f. building. The proposed building would be approximately 54,791 s.f. less than the maximum allowed under TOP 2050. Therefore, the Project will result in less development of the site than the Certified SEIR analyzed at buildout (i.e., 398,901 s.f. vs. 344,110 s.f.). Because the Project Applicant would redevelop the site with a use permitted under the Industrial land use designation, the Project would be consistent with TOP 2050 and, therefore, the water demand associated with the Project was considered in the demand anticipated by the Certified SEIR and impacts would be less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

c. Result in a determination by the wastewater treatment provider that serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Summary of Certified SEIR Finding: The Certified SEIR concluded that IEUA has two facilities that serve the City of Ontario: RP-1 and RP-5. The current combined capacity of these two facilities is 60.3 mgd and would increase to 66.5 mgd once the expansion project that is currently under construction at RP-5 is completed. The additional flow rate from implementation of TOP 2050 would not exceed the capacity of the wastewater treatment providers. Therefore, there would be no significant impacts on wastewater collection and treatment. Impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site is developed with approximately 161,320 s.f. of existing commercial buildings that requires wastewater treatment services. The Project Applicant would demolish the existing structures and redevelop the site with an approximately 344,110 s.f. building. The proposed building would be approximately 54,791 s.f. less than the maximum allowed under TOP 2050. Therefore, the Project will result in less development of the site than the Certified SEIR analyzed at buildout (i.e., 398,901 s.f. vs. 344,110 s.f.) The Project Applicant would redevelop the Project site with a use that is consistent with the site's underlying land use designation; therefore, the wastewater generation associated with the Project was considered in the demand anticipated by the Certified SEIR and the City's Sewer Master Plan and analyzed therein. As such, the IEUA's existing wastewater treatment facilities are anticipated to have adequate capacity to serve the Project's project demand in addition to its existing commitments. Impacts would be less than significant. Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

d. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the increase in population under the TOP 2050 would result in more solid waste generation and could impact the capacity of the receiving landfills. TOP 2050 would result in a net increase in solid waste generation at buildout of 45,204 tons/year. This net increase is about 2 percent of the Badlands Sanitary Landfill and the El Sobrante Landfill's excess capacity. Therefore, there is sufficient landfill capacity to serve future development pursuant to the TOP 2050. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: Solid waste generated during the operation of the Project is anticipated to be collected by the City of Ontario and is anticipated to be hauled to Badlands Sanitary Landfill or El Sobrante Landfill. The Badlands Sanitary Landfill has a permitted disposal capacity of 5,000 tons per day with a remaining capacity of 7,800,000 cubic yards. The Badlands Sanitary Landfill is estimated to reach capacity, at the earliest time, in the year 2059. (CalRecycle, 2023a) The El Sobrante Landfill is permitted to received 16,054 tons of solid waste per day with a remaining capacity of 143,977,170 tons. The El Sobrante Landfill is estimated to reach capacity, at the earliest time, in the year 2051 (CalRecycle, 2023b).

Based on the generation rate of 1.42 pounds per 100 s.f. per day, the proposed 344,110 s.f.

building would result in approximately 4,886 pounds per day (2.44 tons per day). As previously stated, the Badlands Sanitary Landfill has a permitted disposal capacity of 5,000 tons per day and the El Sobrante Landfill has a permitted disposal capacity of 16,054 tons per day. The Project generated solid waste represents a nominal portion of the landfill's capacity and would not contribute significantly to the daily landfill capacity, and the landfill facilities are sufficient. Accordingly, impacts would be less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

e. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Summary of Certified SEIR Finding: The Certified SEIR concluded that future development pursuant to TOP 2050 would comply with Section 4.408 of the 2019 CALGreen building code, which requires that at least 65 percent of nonhazardous construction and demolition waste from nonresidential construction operations be recycled and/or salvaged for reuse. Development would also comply with AB 341, which mandates recycling for commercial and multifamily residential land uses. Additionally, future businesses that generate organic waste in amounts over a certain threshold would be mandated to recycle organic matter in accordance with AB 1826. In addition, TOP 2050 policies ER-2.1, ER-2.2, and ER-2.3 describe waste diversion requirements, hazardous and electronic waste disposal, and purchasing of products made from recycled materials that would ensure that the City has a cost effective integrated waste management system that meets or exceeds state and federal recycling and waste diversion mandates. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The following federal and state laws and regulations govern solid waste disposal:

- AB 939 (Chapter 1095, Statutes of 1989), the California Integrated Waste Management Act of 1989 required each city, county, and regional agency to develop a source reduction and recycling element of an integrated waste management plan that contained specified components, including a source reduction component, a recycling component, and a composting component. With certain exceptions, the source reduction and recycling components were required to divert 50 percent of all solid waste from landfill disposal or transformation by January 1, 2000, through source reduction, recycling, and composting activities.

- AB 32 (Chapter 488, Statutes of 2006), the California Global Warming Solutions Act, established mandatory recycling as one of the measures to reduce GHG emissions adopted in the Scoping Plan by the California Air Resources Board.

- AB 341 (Chapter 476, Statutes of 2011) requires that all "commercial" generators of solid waste (businesses, institutions, and multifamily dwellings) establish recycling and/or composting programs. AB 341 goes beyond AB 939 and establishes the new recycling goal of 75 percent by 2020.

The Project would implement the requirements of the City's Integrated Waste

Department's Refuse & Recycling Planning Manual on refuse and recycling storage and access for service, as well as addressing the City's recycling goals. The requirements of Chapter 3, Integrated Waste Management, of the Municipal Code will also be implemented to ensure that the Project complies with all applicable state and federal laws. Therefore, no impacts are anticipated. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

3. WILDFIRE.

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:

a. Substantially impair an adopted emergency response plan or emergency evacuation plan?

b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Summary of Certified SEIR Finding: The Certified SEIR concluded that substantial improvements in transportation infrastructure planned to accommodate the increase in population in the City in the event of an emergency. Additionally, a review of emergency access is included as part of the City's Design Review process. According to the City's LHMP, interstate highways would serve as major emergency response and evacuation routes. Additionally, the Ontario Fire Department reviews development applications to ensure that adequate emergency accessibility is provided based on local and state guidance. Therefore, impacts related to emergency access would be less than significant.

Moreover, the City is located outside of a State Responsibility Area (SRA) and California Department of Forestry and Fire Protection (CAL FIRE) has determined that the City contains no areas subject to very high wildfire risk. However, the City recognizes that even though fuel loading is light in Ontario and fire risk comes primarily from urban fires, not wildfires, there is some risk related to wildfires. With adherence to the building practices in the CAL FIRE's 2019 Strategic Fire Plan for California, the California Fire Code, County of San Bernardino Multi-Jurisdictional Hazard Mitigation Plan, and City's LHMP, development and infrastructure associated with TOP 2050 would not exacerbate risk or result in post-wildfire hazards.

Discussion of Effects: As concluded in the Certified SEIR, the City is not located with a SRA. According to the California Department of Forestry and Fire Protection's fire hazard map for the Local Responsibility Area (LRA), the Project site is not within a Very High Fire Hazard Severity Zone (CAL FIRE, 2008). Therefore, no impact would occur. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and

addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

4. MANDATORY FINDINGS OF SIGNIFICANCE.

a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat or a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Summary of Certified SEIR Finding: The Certified SEIR concluded that TOP 2050 would result in less-than-significant impacts to sensitive plant and animal species as well as habitats. Additionally, the Certified SEIR concluded that, with mitigation, TOP 2050 would result in significant and unavoidable impacts to Tier III historical resources.

Discussion of Effects: The Project site is in a highly urbanized area of the City that is already developed with industrial uses. As discussed in Biological Resources Section of the Addendum, potentially significant biological impacts are not anticipated because the Project site is developed and there are no rare or endangered plants or animal species within the Project site. Additionally, as indicated in the Cultural Resources Section, the Project site is not included on the National Register of Historic Places, California Register of Historical Resources, or a local register of historical resources, nor is it eligible for listing. Therefore, no impacts are anticipated. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)

Summary of Certified SEIR Finding: The Certified SEIR addressed cumulative impacts for each of the environmental topics evaluated. The Certified SEIR concluded that TOP 2050 would result in significant and unavoidable cumulative impacts regarding air quality, cultural resources (Historic), noise, and transportation (VMT).

Discussion of Effects: As identified through the analysis presented in this Addendum, with the implementation of Project-specific mitigation measures identified herein, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary. Therefore, there is no potential for the Project to result in cumulatively considerable effects to the environment beyond those previously disclosed in the Certified SEIR (and already disclosed throughout this analysis), and instead, the Project's impacts are generally less than the impacts assumed and analyzed in the Certified SEIR.

Mitigation: No additional mitigation required.

c. Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?

Summary of Certified SEIR Finding: The Certified SEIR concluded that with the implementation of the recommended TOP Mitigation Measures, compliance with existing laws, plans and regulations, and the various TOP Implementation Actions outlined in the Project Description, TOP 2050 does not have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly.

Discussion of Effects: The Project's potential to result in environmental effects that could adversely affect human beings, either directly or indirectly, has been discussed throughout this Addendum. The Project would result in less than significant impacts related to air quality and associated effects on human health from air pollutants, GHG emissions, and construction-related noise and potential effects on hearing impairment. Implementation of the Project would not result in environmental effects that would cause substantial adverse effects on human beings, either directly or indirectly, beyond those disclosed in the Certified SEIR, and instead, the Project's impacts are generally less than the impacts assumed by the Certified SEIR.

Mitigation: No additional mitigation required.

EARLIER ANALYZES

(Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, one or more effects have been adequately analyzed in an earlier EIR or Negative Declaration. Section 15063(c)(3)(D)):

1) Earlier Analyzes Used. Identify earlier analyzes used and state where they are available for review.

a) The Ontario Plan Final Environmental Impact Report

b) The Ontario Plan/Policy Plan

c) City of Ontario Zoning

All documents listed above are on file with the City of Ontario Planning Department, 303 East "B" Street, Ontario, California 91764, (909) 395-2036.

2) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of, and adequately analyzed in, an earlier document pursuant to applicable legal standards.

MEMORANDUM

URBAN | CROSSROADS

DATE: June 6, 2023
TO: Tom Cruikshank, Link Logistics Real Estate
FROM: Haseeb Qureshi
Ali Dadabhoy
Shannon Wong
JOB NO: 15364-03 AQ & GHG Assesment

WOODRUFF LOGISTICS AIR QUALITY & GREENHOUSE GAS ASSESSMENT

Tom Cruikshank,

Urban Crossroads, Inc. is pleased to provide the following Air Quality & Greenhouse Gas Assessment for the Woodruff Logistics (**Project**), which is located northeast of Jurupa Street and Rockefeller Avenue, south of Wanamaker Avenue, and straddling the existing Woodruff Way in the City of Ontario.

PROJECT OVERVIEW

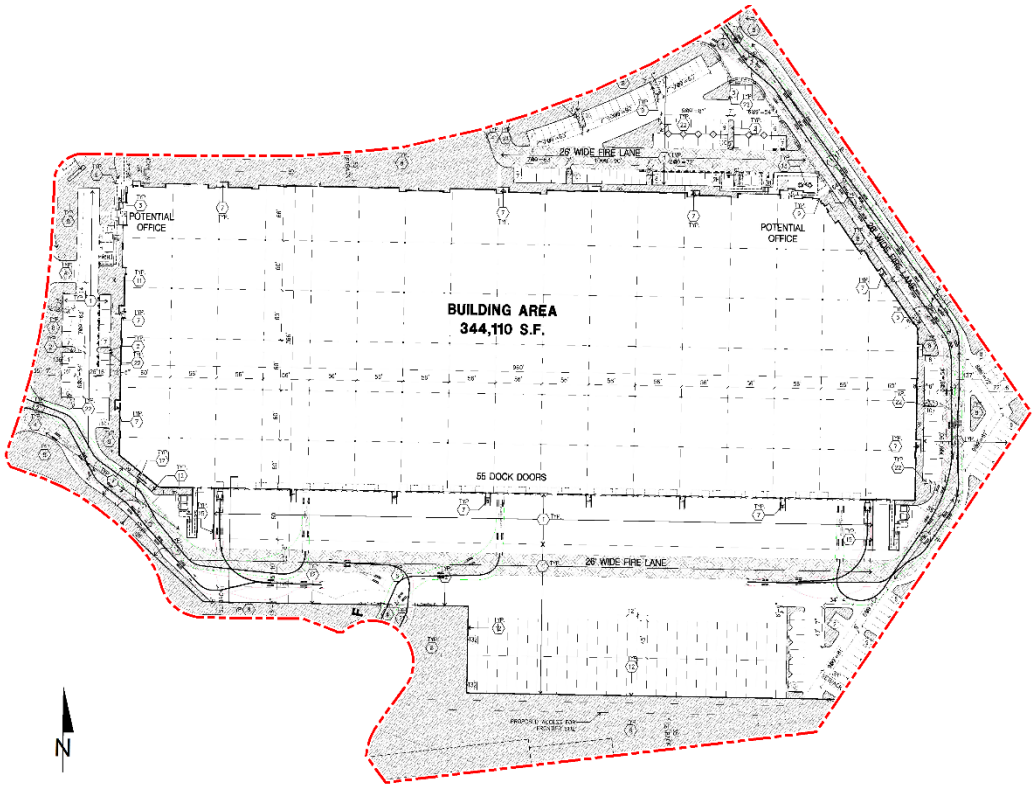
It is our understanding that the Project is to consist of a 344,110[1] square foot industrial warehouse building (see Exhibit 1).

SUMMARY OF FINDINGS

Results of the assessment indicate that the Project would result in a less than significant with respect to air quality, and greenhouse gases.

1 It should be noted that this analysis is based on a previous site plan which assumed slightly larger building square footages. As such, the emissions analyzed in this report may be slightly overstated.

EXHIBIT 1: PROJECT'S SITE PLAN



PROJECT AIR QUALITY IMPACTS

AIR QUALITY SETTING

SOUTH COAST AIR BASIN (SCAB)

The Project site is located in the SCAB within the jurisdiction of South Coast Air Quality Management District (SCAQMD) (1). The SCAQMD was created by the 1977 Lewis-Presley Air Quality Management Act, which merged four county air pollution control bodies into one regional district. Under the Act, the SCAQMD is responsible for bringing air quality in areas under its jurisdiction into conformity with federal and state air quality standards. As previously stated, the Project site is located within the SCAB, a 6,745-square mile subregion of the SCAQMD, which includes portions of Los Angeles, Riverside, and San Bernardino Counties, and all of Orange County.

The SCAB is bounded by the Pacific Ocean to the west and the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east. The Los Angeles County portion of the Mojave Desert Air Basin is bounded by the San Gabriel Mountains to the south and west, the Los Angeles

/ Kern County border to the north, and the Los Angeles / San Bernardino County border to the east. The Riverside County portion of the Salton Sea Air Basin is bounded by the San Jacinto Mountains in the west and spans eastward up to the Palo Verde Valley.

Regional Climate

The regional climate has a substantial influence on air quality in the SCAB. In addition, the temperature, wind, humidity, precipitation, and amount of sunshine influence the air quality.

The annual average temperatures throughout the SCAB vary from the low to middle 60s degrees Fahrenheit (°F). Due to a decreased marine influence, the eastern portion of the SCAB shows greater variability in average annual minimum and maximum temperatures. January is the coldest month throughout the SCAB, with average minimum temperatures of 47°F in downtown Los Angeles and 36°F in San Bernardino. All portions of the SCAB have recorded maximum temperatures above 100°F.

Although the climate of the SCAB can be characterized as semi-arid, the air near the land surface is quite moist on most days because of the presence of a marine layer. This shallow layer of sea air is an important modifier of SCAB climate. Humidity restricts visibility in the SCAB, and the conversion of sulfur dioxide (SO_2) to sulfates (SO_4) is heightened in air with high relative humidity. The marine layer provides an environment for that conversion process, especially during the spring and summer months. The annual average relative humidity within the SCAB is 71 percent (%) along the coast and 59% inland. Since the ocean effect is dominant, periods of heavy early morning fog are frequent and low stratus clouds are a characteristic feature. These effects decrease with distance from the coast.

More than 90% of the SCAB's rainfall occurs from November through April. The annual average rainfall varies from approximately nine inches in Riverside to fourteen inches in downtown Los Angeles. Monthly and yearly rainfall totals are extremely variable. Summer rainfall usually consists of widely scattered thunderstorms near the coast and slightly heavier shower activity in the eastern portion of the SCAB with frequency being higher near the coast.

Due to its generally clear weather, about three-quarters of available sunshine is received in the SCAB. The remaining one-quarter is absorbed by clouds. The ultraviolet portion of this abundant radiation is a key factor in photochemical reactions. On the shortest day of the year there are approximately 10 hours of possible sunshine, and on the longest day of the year there are approximately 14½ hours of possible sunshine.

The importance of wind to air pollution is considerable. The direction and speed of the wind determines the horizontal dispersion and transport of the air pollutants. During the late autumn to early spring rainy season, the SCAB is subjected to wind flows associated with the traveling storms moving through the region from the northwest. This period also brings five to ten periods of strong, dry offshore winds, locally termed "Santa Anas" each year. During the dry season, which coincides with the months of maximum photochemical smog concentrations, the wind flow is bimodal, typified by a daytime onshore sea breeze and a nighttime offshore drainage wind. Summer wind flows are created by the pressure differences between the relatively cold ocean and the unevenly heated and cooled land surfaces that modify the general northwesterly wind circulation over southern California. Nighttime drainage begins with the radiational cooling of the mountain slopes. Heavy, cool air descends the slopes and flows through the mountain passes

and canyons as it follows the lowering terrain toward the ocean. Another characteristic wind regime in the SCAB is the "Catalina Eddy," a low level cyclonic (counterclockwise) flow centered over Santa Catalina Island which results in an offshore flow to the southwest. On most spring and summer days, some indication of an eddy is apparent in coastal sections.

In the SCAB, there are two distinct temperature inversion structures that control vertical mixing of air pollution. During the summer, warm high-pressure descending (subsiding) air is undercut by a shallow layer of cool marine air. The boundary between these two layers of air is a persistent marine subsidence/inversion. This boundary prevents vertical mixing which effectively acts as an impervious lid to pollutants over the entire SCAB. The mixing height for the inversion structure is normally situated 1,000 to 1,500 feet above mean sea level.

A second inversion-type forms in conjunction with the drainage of cool air off the surrounding mountains at night followed by the seaward drift of this pool of cool air. The top of this layer forms a sharp boundary with the warmer air aloft and creates nocturnal radiation inversions. These inversions occur primarily in the winter when nights are longer and onshore flow is weakest. They are typically only a few hundred feet above mean sea level. These inversions effectively trap pollutants, such as nitrogen oxides (NO_X) and carbon monoxide (CO) from vehicles, as the pool of cool air drifts seaward. Winter is therefore a period of high levels of primary pollutants along the coastline.

Wind Patterns and Project Location

The distinctive climate of the Project area and the SCAB is determined by its terrain and geographical location. The SCAB is located in a coastal plain with connecting broad valleys and low hills, bounded by the Pacific Ocean in the southwest quadrant with high mountains forming the remainder of the perimeter.

Wind patterns across the south coastal region are characterized by westerly and southwesterly onshore winds during the day and easterly or northeasterly breezes at night. Winds are characteristically light although the speed is somewhat greater during the dry summer months than during the rainy winter season.

Criteria Pollutants

Both the U.S. Environmental Protection Agency (EPA) and the California Air Resources Board (CARB) have established ambient air quality standards for common pollutants. These ambient air quality standards are levels of contaminants representing safe levels that avoid specific adverse health effects associated with each pollutant. The ambient air quality standards cover what are called "criteria" pollutants because the health and other effects of each pollutant are described in criteria documents. The six criteria pollutants are ozone (O_3) (precursor emissions include NO_X and reactive organic gases (ROG), CO, particulate matter (PM), nitrogen dioxide (NO_2), sulfur dioxide (SO_2), and lead. Areas that meet ambient air quality standards are classified as attainment areas, while areas that do not meet these standards are classified as nonattainment areas. The Riverside County portion of the SCAB is designated as a nonattainment area for the federal O_3 and $PM_{2.5}$ standards and is also a nonattainment area for the state standards for O_3, PM_{10}, and $PM_{2.5}$.

Toxic Air Contaminants (TAC) Trend

In 1984, as a result of public concern for exposure to airborne carcinogens, CARB adopted regulations to reduce the amount of TAC emissions resulting from mobile and area sources, such as cars, trucks, stationary products, and consumer products. According to the Ambient and Emission Trends of Toxic Air Contaminants in California journal article (2) which was prepared for CARB, results show that between 1990-2012, ambient concentration and emission trends for the seven TACs responsible for most of the known cancer risk associated with airborne exposure in California have declined significantly (between 1990 and 2012). The seven TACs studied include those that are derived from mobile sources: diesel particulate matter (DPM), benzene (C_6H_6), and 1,3-butadiene (C_4H_6); those that are derived from stationary sources: perchloroethylene (C_2Cl_4) and hexavalent chromium (Cr(VI)); and those derived from photochemical reactions of emitted VOCs: formaldehyde (CH_2O) and acetaldehyde (C_2H_4O)[2]. The decline in ambient concentration and emission trends of these TACs are a result of various regulations CARB has implemented to address cancer risk.

Some people are especially sensitive to air pollution and are given special consideration when evaluating air quality impacts from projects. These groups of people include children, the elderly, and individuals with pre-existing respiratory or cardiovascular illness. Structures that house these persons or places where they gather are defined as "sensitive receptors". These structures typically include uses such as residences, hotels, and hospitals where an individual can remain for 24 hours. Consistent with the LST Methodology, the nearest land use where an individual could remain for 24 hours to the Project site has been used to determine construction and operational air quality impacts for emissions of PM_{10} and $PM_{2.5}$, since PM_{10} and $PM_{2.5}$ thresholds are based on a 24-hour averaging time.

Receptors in the Project study area are described below. All distances are measured from the Project site boundary to the outdoor living areas (e.g., backyards) or at the building façade, whichever is closer to the Project site. Receptors in the Project study area are shown on Exhibit 2 under the Localized Construction Emissions section later in the report.

- Receptor R1 represents the Nexen Tire Distribution Center at 4305 E Jurupa St, approximately 183 feet west of the Project site.
- Receptor R2 represents Converse Inc. at 4450 E Lowell St, approximately 180 feet west of the Project site.
- Receptor R3 represents Chinese Laundry DC at 1251 S Rockefeller, approximately 144 feet north of the Project site.
- Receptor R4 represents Ace Calendering Enterprises at 1311 Wanamaker Ave, adjacent east of the Project site.
- Receptor R5 represents Rodeway Inn Ontario Mills Mall at 4075 E Guasti Rd, approximately 5,587 feet northwest of the Project site.

[2] It should be noted that ambient DPM concentrations are not measured directly. Rather, a surrogate method using the coefficient of haze (COH) and elemental carbon (EC) is used to estimate DPM concentrations.

REGULATORY BACKGROUND

FEDERAL REGULATIONS

The EPA is responsible for setting and enforcing the national ambient air quality standards (NAAQS) for O_3, CO, NO_X, SO_2, PM_{10}, and lead (Pb) (3). The EPA has jurisdiction over emissions sources that are under the authority of the federal government including aircraft, locomotives, and emissions sources outside state waters (Outer Continental Shelf). The EPA also establishes emission standards for vehicles sold in states other than California. Automobiles sold in California must meet the stricter emission requirements of CARB.

The Federal Clean Air Act (CAA) was first enacted in 1955 and has been amended numerous times in subsequent years (1963, 1965, 1967, 1970, 1977, and 1990). The CAA establishes the federal air quality standards, the NAAQS, and specifies future dates for achieving compliance (4). The CAA also mandates that each state submit and implement state implementation plans (SIPs) for local areas not meeting these standards. These plans must include pollution control measures that demonstrate how the standards will be met.

The 1990 amendments to the CAA that identify specific emission reduction goals for areas not meeting the NAAQS require a demonstration of reasonable further progress toward attainment and incorporate additional sanctions for failure to attain or to meet interim milestones. The sections of the CAA most directly applicable to the development of the Project site include Title I (Non-Attainment Provisions) and Title II (Mobile Source Provisions) (5) (6). Title I provisions were established with the goal of attaining the NAAQS for the following criteria pollutants O_3, NO_2, SO_2, PM_{10}, CO, $PM_{2.5}$, and Pb. The NAAQS were amended in July 1997 to include an additional standard for O_3 and to adopt a NAAQS for $PM_{2.5}$.

Mobile source emissions are regulated in accordance with Title II provisions. These provisions require the use of cleaner burning gasoline and other cleaner burning fuels such as methanol and natural gas. Automobile manufacturers are also required to reduce tailpipe emissions of hydrocarbons and NO_X. NO_X is a collective term that includes all forms of NO_X which are emitted as byproducts of the combustion process.

CALIFORNIA REGULATIONS

CARB

The CARB, which became part of the California EPA (CalEPA) in 1991, is responsible for ensuring implementation of the California Clean Air Act (AB 2595), responding to the federal CAA, and for regulating emissions from consumer products and motor vehicles. AB 2595 mandates achievement of the maximum degree of emissions reductions possible from vehicular and other mobile sources in order to attain the state ambient air quality standards by the earliest practical date. The CARB established the California ambient air quality standards (CAAQS) for all pollutants for which the federal government has NAAQS and, in addition, establishes standards for SO_4, visibility, hydrogen sulfide (H_2S), and vinyl chloride (C_2H_3Cl). However, at this time, H_2S and C_2H_3Cl are not measured at any monitoring stations in the SCAB because they are not considered to be a regional air quality problem. Generally, the CAAQS are more stringent than the NAAQS (7) (8).

Local air quality management districts, such as the SCAQMD, regulate air emissions from stationary sources such as commercial and industrial facilities. All air pollution control districts have been formally designated as attainment or non-attainment for each CAAQS.

Serious non-attainment areas are required to prepare Air Quality Management Plans (AQMP) that include specified emission reduction strategies in an effort to meet clean air goals. These plans are required to include:

- Application of Best Available Retrofit Control Technology to existing sources;
- Developing control programs for area sources (e.g., architectural coatings and solvents) and indirect sources (e.g. motor vehicle use generated by residential and commercial development);
- A District permitting system designed to allow no net increase in emissions from any new or modified permitted sources of emissions;
- Implementing reasonably available transportation control measures and assuring a substantial reduction in growth rate of vehicle trips and miles traveled;
- Significant use of low emissions vehicles by fleet operators;
- Sufficient control strategies to achieve a 5% or more annual reduction in emissions or 15% or more in a period of three years for ROGs, NO_X, CO and PM_{10}. However, air basins may use alternative emission reduction strategy that achieves a reduction of less than 5% per year under certain circumstances.

AQMP

Currently, the NAAQS and CAAQS are exceeded in most parts of the SCAB. In response, the SCAQMD has adopted a series of AQMP to meet the state and federal ambient air quality standards (9). AQMPs are updated regularly in order to more effectively reduce emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy.

APPLICABLE REGULATORY REQUIRMENTS

SCAQMD Rules that are currently applicable during construction activity for this Project include but are not limited to Rule 403 (Fugitive Dust) and Rule 1113 (Architectural Coatings) (10) (11).

SCAQMD Rule 403

This rule is intended to reduce the amount of particulate matter entrained in the ambient air as a result of anthropogenic (human-made) fugitive dust sources by requiring actions to prevent and reduce fugitive dust emissions. Rule 403 applies to any activity or human-made condition capable of generating fugitive dust and requires best available control measures to be applied to earth moving and grading activities. This rule is intended to reduce PM_{10} emissions from any transportation, handling, construction, or storage activity that has the potential to generate fugitive dust. PM_{10} suppression techniques are summarized below.

- Portions of a construction site to remain inactive longer than a period of three months will be seeded and watered until grass cover is grown or otherwise stabilized.

- All onsite roads will be paved as soon as feasible or watered periodically or chemically stabilized.
- All material transported offsite will be either sufficiently watered or securely covered to prevent excessive amounts of dust.
- The area disturbed by clearing, grading, earthmoving, or excavation operations will be minimized at all times.
- Where vehicles leave a construction site and enter adjacent public streets, the streets will be swept daily or washed down at the end of the workday to remove soil tracked onto the paved surface.

SCAQMD Rule 1113

This rule serves to limit the volatile organic compound (VOC) content of architectural coatings used on projects in the SCAQMD. Any person who supplies, sells, offers for sale, or manufactures any architectural coating for use on projects in the SCAQMD must comply with the current VOC standards set in this rule.

METHODOLOGY

In May 2022, the California Air Pollution Control Officers Association (CAPCOA) in conjunction with other California air districts, including SCAQMD, released the latest version of the CalEEMod Version 2022.1. The purpose of this model is to calculate construction-source and operational-source criteria pollutant (VOCs, NO_X, SO_X, CO, PM_{10}, and $PM_{2.5}$) and GHG emissions from direct and indirect sources; and quantify applicable air quality and GHG reductions achieved from mitigation measures (12). Accordingly, the latest version of CalEEMod has been used for this Project to determine construction and operational air quality and greenhouse gas emissions.

Standards of Significance

The criteria used to determine the significance of potential Project-related air quality impacts are taken from the California Environmental Quality Act Guidelines (CEQA Guidelines) (14 CCR §§15000, et seq.). Based on these thresholds, a project would result in a significant impact related to air quality if it would (13):

- **Threshold 1**: Conflict with or obstruct implementation of the applicable air quality plan.
- **Threshold 2**: Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard.
- **Threshold 3**: Expose sensitive receptors to substantial pollutant concentrations.
- **Threshold 4**: Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

AIR QUALITY REGIONAL EMISSIONS THRESHOLDS

The SCAQMD has developed regional significance thresholds for criteria pollutants, as summarized at Table 1 (14). The SCAQMD's CEQA Air Quality Significance Thresholds (April 2019) indicate that any projects in the South Coast Air Basin (SCAB) with daily emissions that exceed

any of the indicated thresholds should be considered as having an individually and cumulatively significant air quality impact.

TABLE 1: MAXIMUM DAILY REGIONAL EMISSIONS THRESHOLDS

Pollutant	Construction	Operations
NO_X	100 lbs/day	55 lbs/day
VOC	75 lbs/day	55 lbs/day
PM_{10}	150 lbs/day	150 lbs/day
$PM_{2.5}$	55 lbs/day	55 lbs/day
SO_X	150 lbs/day	150 lbs/day
CO	550 lbs/day	550 lbs/day

lbs/day – Pounds Per Day

AIR QUALITY LOCALIZED EMISSIONS THRESHOLDS

For this Project, the appropriate SRA for the LST analysis is the SCAQMD South San Gabriel Valley Area monitoring station (SRA 11). LSTs apply to CO, NO_2, PM_{10}, and $PM_{2.5}$. The SCAQMD produced look-up tables for projects less than or equal to 5 acres in size. The SCAQMD's screening look-up tables are utilized in determining localized impacts. It should be noted that since the look-up tables identify thresholds at only 1 acre, 2 acres, and 5 acres, linear regression has been utilized to determine localized significance thresholds. Consistent with SCAQMD guidance, the thresholds presented in Table 2 were calculated by interpolating the threshold values for the Project's disturbed acreage.

The acres disturbed is based on the equipment list and days in the demolition, site preparation, and grading phase according to the anticipated maximum number of acres a given piece of equipment can pass over in an 8-hour workday. The equipment-specific grading rates are summarized in the CalEEMod user's guide, Appendix A: Calculation Details for CalEEMod (15). It should be noted that the disturbed area per day is representative of a piece of equipment making multiple passes over the same land area. In other words, one Rubber Tired Dozer can make multiple passes over the same land area totaling 0.5 acres in a given 8-hour day. Appendix A of the CalEEMod User Manual only identifies equipment-specific grading rates for Crawler Tractors, Graders, Rubber Tired Dozers, and Scrapers; therefore, Tractors/Loaders/Backhoes equipment that was included in the demolition, site preparation and grading phase was replaced with Crawler Tractors. For analytical purposes, emissions associated with peak site demolition, preparation, and grading activities are considered for purposes of localized significance thresholds (LSTs) since this phase represents the maximum localized emissions that would occur. The Project's construction activities could disturb a maximum of approximately 1 acre per day for demolition, 3.5 acres per day for site preparation and 4 acres per day for grading activities. Any other construction phases of development would result in lesser emissions and consequently lesser impacts than what is disclosed herein. As such, Table 2 presents thresholds for localized construction and operational emissions.

TABLE 2: MAXIMUM DAILY LOCALIZED EMISSIONS THRESHOLDS

Source	Activity	Emissions (lbs/day)			
		VOC	NOX	PM_{10}	$PM_{2.5}$
Construction	Demolition	118 lbs/day	869 lbs/day	990 lbs/day	578 lbs/day
	Site Preparation	220 lbs/day	1,721 lbs/day	794 lbs/day	639 lbs/day
	Grading	237 lbs/day	1,881 lbs/day	880 lbs/day	650 lbs/day
Operations	N/A	270 lbs/day	1,754 lbs/day	254 lbs/day	161 lbs/day

[1]Source of localized significance threshold (LSTs) is provided on page 20.

CONSTRUCTION ACTIVITIES

Construction activities associated with the Project would result in emissions of VOCs, NO_X, SO_X, CO, PM_{10}, and $PM_{2.5}$. Construction related emissions are expected from the following construction activities:

- Demolition
- Site Preparation
- Grading (Import/Export)
- Building Construction
- Paving
- Architectural Coating

DEMOLITION ACTIVITIES

The Project site is currently existing uses that are currently active, specifically the Citrus Motors Ford and Citrus Motors Kia auto dealership buildings which will be demolished, resulting in approximately 161,692 square feet of demolished material.

GRADING ACTIVITIES

Dust is typically a major concern during grading activities. Because such emissions are not amenable to collection and discharge through a controlled source, they are called "fugitive emissions". Fugitive dust emissions rates vary as a function of many parameters (soil silt, soil moisture, wind speed, area disturbed, number of vehicles, depth of disturbance or excavation, etc.). CalEEMod was utilized to calculate fugitive dust emissions resulting from this phase of activity. Per client provided data, the Project is expected to balance, and import/export would be required. The CalEEMod default trip length of 20-miles will be used to analyze the emissions associated with export activities.

ON-ROAD TRIPS

Construction generates on-road vehicle emissions from vehicle usage for workers, vendors, and haul trucks commuting to and from the site. Worker and hauling trips are based on CalEEMod defaults. It should be noted that for vendor trips, specifically, CalEEMod only assigns vendor trips to the Building Construction phase. Vendor trips would likely occur during all phases of construction. As such, the CalEEMod defaults for vendor trips have been adjusted based on a ratio of the total vendor trips to the number of days of each subphase of activity.

CONSTRUCTION DURATION

For purposes of analysis, construction of Project is expected to commence in August 2024 and would last through August 2025. The construction schedule utilized in the analysis represents a "worst-case" analysis scenario should construction occur any time after the respective dates since emission factors for construction decrease as time passes and the analysis year increases due to emission regulations becoming more stringent[3]. The duration of construction activity and associated equipment represents a reasonable approximation of the expected construction fleet as required per CEQA Guidelines (16).

CONSTRUCTION EQUIPMENT

CalEEMod default parameters for equipment has been used. Consistent with industry standards and typical construction practices, each piece of equipment will operate up to a total of eight (8) hours per day, or more than two-thirds of the period during which construction activities are allowed pursuant to the code.

REGIONAL CONSTRUCTION EMISSIONS SUMMARY

The estimated maximum daily construction emissions are summarized on Table 3, and as shown, the Project construction-source emissions would not exceed SCAQMD regional thresholds. Thus, the Project would result in a less than significant impact associated with construction activities. Detailed Construction model outputs are presented in Attachment A.

[3] As shown in the CalEEMod User's Guide Version 2022.1, Section 4.3 "Off-Road Equipment" as the analysis year increases, emission factors for the same equipment pieces decrease due to the natural turnover of older equipment being replaced by newer less polluting equipment and new regulatory requirements.

TABLE 3: REGIONAL CONSTRUCTION EMISSIONS SUMMARY

Source	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Summer						
2024	3.74	36.10	34.40	0.06	6.80	4.22
2025	60.20	22.30	41.20	0.05	2.84	1.49
Winter						
2024	3.62	34.50	31.50	0.06	4.41	2.38
2025	1.87	13.60	23.50	0.04	2.75	1.00
Maximum Daily Emissions	**60.20**	**36.10**	**41.20**	**0.06**	**6.80**	**4.22**
SCAQMD Regional Threshold	75	100	550	150	150	55
Threshold Exceeded?	NO	NO	NO	NO	NO	NO

[1]PM_{10} and $PM_{2.5}$ source emissions reflect 3x daily watering per SCAQMD Rule 403 for fugitive dust.

REGIONAL OPERATIONAL EMISSIONS

Operational activities associated with the Project would result in emissions of VOCs, NO_X, CO, SO_X, PM_{10}, and $PM_{2.5}$. Operational related emissions are expected from the following primary sources: area source emissions, energy source emissions, and mobile source emissions.

The Project related operational air quality impacts derive primarily from vehicle trips generated by the Project. Trip characteristics available from the *Woodruff Logistics* Trip Generation Assessment were utilized in this analysis (17).

To determine emissions from trucks for the proposed industrial uses, the analysis incorporated the SCAQMD recommended truck trip length 15.3 miles for 2-axle (LHDT1, LHDT2) trucks, 14.2 miles 3-axle (MHDT) trucks and 39.9 miles for 4+-axle (HHDT) trucks and weighting the average trip lengths using the following SCAQMD recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%. The trip length function for trucks in CalEEMod has been revised to 29.69 miles, with an assumption of 100% primary trips for the proposed industrial land uses.

In order to account for the possibility of refrigerated uses, trucks associated with the cold-storage land use are assumed to also have TRUs. Therefore, for modeling purposes 20 trucks have the potential to include TRUs. TRUs are accounted for during on-site and off-site travel. The TRU calculations are based on EMissions FACtor Model version 2021 (EMFAC2021), developed by the CARB. EMFAC2021 does not provide emission rates per hour or mile as with the on-road emission model and only provides emission inventories. Emission results are produced in tons per day while all activity, fuel consumption and horsepower hours were reported at annual levels. The emission inventory is based on specific assumptions including the average horsepower rating of specific types of equipment and the hours of operation annually. These assumptions are not always consistent with assumptions used in the modeling of project level emissions. Therefore, the emissions inventory was converted into emission rates to accurately calculate emissions from

TRU operation associated with project level details. This was accomplished by converting the annual horsepower hours to daily operational characteristics and converting the daily emission levels into hourly emission rates based on the total emission of each criteria pollutant by equipment type and the average daily hours of operation.

It is common for warehouse buildings to require the operation of exterior yard trucks or cargo handling equipment (CHE) to move empty containers and empty chassis in the building's truck court areas. The cargo handling equipment is assumed to have a horsepower (hp) range of approximately 175 hp to 200 hp. Based on the latest available information from SCAQMD (18); for example, warehouse projects typically have 3.6-yard trucks/CHE per million square feet of building space. For this Project, on-site modeled operational equipment conservatively includes up to one (2) 200 horsepower (hp), compressed natural gas or gasoline-powered tractors/loaders/backhoes operating at 4 hours a day[4] for 365 days of the year.

The estimated operation-source emissions from the Project are summarized on Table 4. Detailed operation model outputs are presented in Attachment A. As shown on Table 4, operational-source emissions would not exceed the applicable SCAQMD regional thresholds for emissions of any criteria pollutant.

THE ONTARIO PLAN (TOP) 2050

The Ontario Plan (**TOP**) 2050 Environmental Impact Report (**EIR**) (August 2022) designates the Project site with industrial development. Per the adopted TOP 2050, the Project site could be developed with up to 398,901 square feet of industrial use (assuming a 16.65-acre site and a floor-to-area-ratio of 0.55). The estimated operation-source emissions based on the TOP 2050 adopted Industrial land use designation are summarized on Table 5. Detailed operation model outputs for the TOP 2050 adopted Industrial land use designation are presented in Attachment D.

The Project related operational air quality impacts derive primarily from vehicle trips generated by the Project. Trip characteristics available from the *Woodruff Logistics* Trip Generation Assessment were utilized in this analysis (19).

It is common for warehouse buildings to require the operation of exterior yard trucks or cargo handling equipment (CHE) to move empty containers and empty chassis in the building's truck court areas. The cargo handling equipment is assumed to have a horsepower (hp) range of approximately 175 hp to 200 hp. Based on the latest available information from SCAQMD (18); for example, warehouse projects typically have 3.6-yard trucks/CHE per million square feet of building space. For this Project, on-site modeled operational equipment conservatively includes up to one (2) 200 horsepower (hp), compressed natural gas or gasoline-powered tractors/loaders/backhoes operating at 4 hours a day[5] for 365 days of the year.

To determine emissions from trucks for the TOP 2050 adopted Industrial land use designation, the analysis incorporated the SCAQMD recommended truck trip length 15.3 miles for 2-axle (LHDT1, LHDT2) trucks, 14.2 miles 3-axle (MHDT) trucks and 39.9 miles for 4+-axle (HHDT) trucks and weighting the average trip lengths using the following SCAQMD recommended truck mix: 2-

[5] Based on Table II-3, Port and Rail Cargo Handling Equipment Demographics by Type, from CARB's Technology Assessment: Mobile Cargo Handling Equipment document, a single piece of equipment could operate up to 2 hours per day (Total Average Annual Activity divided by Total Number Pieces of Equipment). As such, the analysis conservatively assumes that the tractor/loader/backhoes would operate up to 4 hours per day.

Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%. The trip length function for trucks in CalEEMod has been revised to 30.02 miles, with an assumption of 100% primary trips for the existing land uses.

PROJECT NET NEW OPERATIONAL EMISSIONS – COMPARISON TO TOP 2050

As shown in Table 6, the proposed Project is anticipated to generate less emissions per day for pollutants of VOC, NO_X, CO, SO_X, and $PM_{2.5}$ as compared to emissions generated by the TOP 2050 adopted Industrial land use designation, and operational-source emissions would not exceed the applicable SCAQMD regional thresholds.

TABLE 6: PROJECT NET NEW REGIONAL OPERATIONAL EMISSIONS

EXISTING BUILDING OPERATIONAL EMISSIONS

The site is occupied by existing uses that are currently active, specifically the Citrus Motors Ford and Citrus Motors Kia auto dealership buildings, which are approximately 161,692 square feet combined. The estimated operation-source emissions from the existing building are summarized on Table 7. Detailed operation model outputs for the existing use are presented in Attachment C.

The Project related operational air quality impacts derive primarily from vehicle trips generated by the Project. Trip characteristics available from the *Woodruff Logistics* Trip Generation Assessment were utilized in this analysis (17).

To determine emissions from trucks for the existing industrial uses, the analysis incorporated the SCAQMD recommended truck trip length 15.3 miles for 2-axle (LHDT1, LHDT2) trucks, 14.2 miles 3-axle (MHDT) trucks and 39.9 miles for 4+-axle (HHDT) trucks and weighting the average trip lengths using the following SCAQMD recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%. The trip length function for trucks in CalEEMod has been revised to 15.30 miles, with an assumption of 100% primary trips for the existing land uses.

LOCALIZED CONSTRUCTION EMISSIONS

The analysis makes use of methodology included in the SCAQMD *Final Localized Significance Threshold Methodology* (LST Methodology) (20). The SCAQMD has established that impacts to air quality are significant if there is a potential to contribute or cause localized exceedances of the federal and/or state ambient air quality standards (NAAQS/CAAQS). Collectively, these are referred to as Localized Significance Thresholds (LSTs). The SCAQMD established LSTs in response to the SCAQMD Governing Board's Environmental Justice Initiative I-46. LSTs represent the maximum emissions from a project that will not cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard at the sensitive receptor. The SCAQMD states that lead agencies can use the LSTs as another indicator of significance in its air quality impact analyses. It should be noted that SCAQMD also states that Projects that are statutorily or categorically exempt under CEQA would not be subject to LST analyses. Projects exempt from CEQA also include infill projects that meet the H&S Code provisions. As such, although not required for this Project, LST analysis is presented to further underscore that there are in fact no significant impacts associated with the Project.

[6] The purpose of SCAQMD's Environmental Justice program is to ensure that everyone has the right to equal protection from air pollution and fair access to the decision-making process that works to improve the quality of air within their communities. Further, the SCAQMD defines Environmental Justice as "...equitable environmental policymaking and enforcement to protect the health of all residents, regardless of age, culture, ethnicity, gender, race, socioeconomic status, or geographic location, from the health effects of air pollution."

The SCAQMD recommends that the nearest sensitive receptor be considered when determining the Project's potential to cause an individual or cumulatively significant impact. The nearest land use where an individual could remain for 24 hours to the Project site has been used to determine localized construction and operational air quality impacts for emissions of PM_{10} and $PM_{2.5}$ (since PM_{10} and $PM_{2.5}$ thresholds are based on a 24-hour averaging time). The nearest receptor used for evaluation of localized impacts of PM_{10} and $PM_{2.5}$ is location R5, represented by the Rodeway Inn Ontario Mills Mall at 4075 E Guasti Rd, approximately 5,587 feet (1,703 meters) northwest of the Project site. Receptors in the Project study area shown on Exhibit 2.

As previously stated, and consistent with LST Methodology, the nearest industrial/commercial use to the Project site is used to determine construction and operational LST air impacts for emissions of NO_X and CO as the averaging periods for these pollutants are shorter (8 hours or less) and it is reasonable to assume that an individual could be present at these sites for periods of one to 8 hours. The nearest receptor used for evaluation of localized impacts of NO_X and CO is location R4, represented by Ace Calendering Enterprises at 1311 Wanamaker Ave, adjacent east of the Project site.

It should be noted that the *LST Methodology* explicitly states that "*It is possible that a project may have receptors closer than 25 meters. Projects with boundaries located closer than 25 meters to the nearest receptor should use the LSTs for receptors located at 25 meters* (20)." As such, for evaluation of localized NO_x and CO, a 25-meter distance will be used.

EXHIBIT 2: SENSITIVE RECEPTOR LOCATIONS

Table 7 identifies the localized impacts at the nearest receptor location in the vicinity of the Project. Outputs from the model runs for construction LSTs are provided in Attachment A. For analytical purposes, emissions associated with peak demolition, site preparation and grading activities are considered for purposes of LSTs since these phases represents the maximum localized emissions that would occur. Any other construction phases of development that overlap would result in lesser emissions and consequently lesser impacts than what is disclosed herein. As shown in Table 9, emissions resulting from the Project construction will not exceed the numerical thresholds of significance established by the SCAQMD for any criteria pollutant. Thus, a less than significant impact would occur for localized Project-related construction-source emissions and no mitigation is required.

TABLE 9: PROJECT LOCALIZED CONSTRUCTION IMPACTS

On-Site Emissions	Emissions (lbs/day)			
	NO_X	CO	PM_{10}	$PM_{2.5}$
Demolition				
Maximum Daily Emissions	24.90	21.70	6.47	1.80
SCAQMD Localized Threshold	118	869	990	578
Threshold Exceeded?	NO	NO	NO	NO
Site Preparation				
Maximum Daily Emissions	36.00	32.90	7.26	4.16
SCAQMD Localized Threshold	220	1,721	794	639
Threshold Exceeded?	NO	NO	NO	NO
Grading				
Maximum Daily Emissions	34.30	30.20	4.12	2.31
SCAQMD Localized Threshold	237	1,881	880	650
Threshold Exceeded?	NO	NO	NO	NO

LOCALIZED OPERATIONAL EMISSIONS

Table 10 identifies the localized operational impacts at the nearest receptor location in the vicinity of the Project. In an effort to establish a maximum potential impact scenario for analytical purposes, the emissions shown on Table 10 represent all on-site Project-related stationary (area) sources and on-site mobile source emissions. It should be noted that the longest on-site distance is roughly 0.23 miles for both trucks and passenger vehicles. As such, a separate CalEEMod run for operational LSTs has been prepared which accounts for the 0.23-mile on-site travel distance. Outputs from the model runs for operational LSTs are provided in Attachment B. As shown in Table 10, emissions resulting from the Project operation will not exceed the numerical localized thresholds of significance established by the SCAQMD for any criteria pollutant. Thus, a less than significant impact would occur for localized Project-related operational-source emissions and no mitigation is required.

TABLE 10: PROJECT LOCALIZED OPERATIONAL IMPACTS

On-Site Emissions	Emissions (lbs/day)			
	NO_X	CO	PM_{10}	$PM_{2.5}$
Maximum Daily Emissions	3.72	53.69	0.27	0.23
SCAQMD Localized Threshold	270	1,754	254	161
Threshold Exceeded?	NO	NO	NO	NO

AIR QUALITY IMPACTS – CONSISTENCY WITH THRESHOLD NO. 1

Would the Project conflict with or obstruct implementation of the applicable air quality plan?

The Project site is located within the SCAB, which is characterized by relatively poor air quality. The SCAQMD has jurisdiction over an approximately 10,743 square-mile area consisting of the four-county Basin and the Los Angeles County and Riverside County portions of what use to be referred to as the Southeast Desert Air Basin. In these areas, the SCAQMD is principally responsible for air pollution control, and works directly with the Southern California Association of Governments (SCAG), county transportation commissions, local governments, as well as state and federal agencies to reduce emissions from stationary, mobile, and indirect sources to meet state and federal ambient air quality standards.

Currently, these state and federal air quality standards are exceeded in most parts of the SCAB. In response, the SCAQMD has adopted a series of AQMPs to meet the state and federal ambient air quality standards. AQMPs are updated regularly in order to more effectively reduce emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy.

In December 2022, the SCAQMD released the Final 2022 AQMP (2022 AQMP). The 2022 AQMP continues to evaluate current integrated strategies and control measures to meet the CAAQS, as well as explore new and innovative methods to reach its goals. Some of these approaches include utilizing incentive programs, recognizing existing co-benefit programs from other sectors, and developing a strategy with fair-share reductions at the federal, state, and local levels (21). Similar to the 2016 AQMP, the 2022 AQMP incorporates scientific and technological information and planning assumptions, including the 2020-2045 RTP/SCS, a planning document that supports the integration of land use and transportation to help the region meet the federal CAA requirements (22). The Project's consistency with the AQMP will be determined using the 2022 AQMP as discussed below.

Criteria for determining consistency with the AQMP are defined in Chapter 12, Section 12.2 and Section 12.3 of the 1993 CEQA Handbook (23). These indicators are discussed below.

The proposed Project will not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.

The violations that under this criterion refer to are the CAAQS and NAAQS. CAAQS and NAAQS violations would occur if regional or localized significance thresholds were exceeded.

CAAQS and NAAQS violations would occur if regional or localized significance thresholds were exceeded. As evaluated, the Project's regional and localized construction and operational-source emissions would not exceed applicable regional significance thresholds. As such, a less than significant impact is expected.

On the basis of the preceding discussion, the Project is determined to be consistent with the first criterion.

The Project will not exceed the assumptions in the AQMP based on the years of Project build-out phase.

The 2022 AQMP demonstrates that the applicable ambient air quality standards can be achieved within the timeframes required under federal law. Growth projections from local general plans adopted by cities in the district are provided to the SCAG, which develops regional growth forecasts, which are then used to develop future air quality forecasts for the AQMP. Development consistent with the growth projections in City of Ontario General Plan is considered to be consistent with the AQMP.

Peak day emissions generated by construction activities are largely independent of land use assignments, but rather are a function of development scope and maximum area of disturbance. Irrespective of the site's land use designation, development of the site to its maximum potential would likely occur, with disturbance of the entire site occurring during construction activities. As such, when considering that no emissions thresholds will be exceeded, a less than significant impact would result.

The TOP 2050 adopted by the City in August 2022, designates the Project site as "Industrial" land uses. The "Industrial" designation allows for a wide range of light industrial uses, including warehousing/distribution, assembly, light manufacturing, research and development, storage, repair facilities, and supporting retail and professional office uses. This designation also accommodates activities that could potentially generate impacts, such as noise, dust, and other nuisances. (24).

The proposed Project includes the development of 344,110 square foot industrial warehouse building. As previously stated, the Project is consistent with the current land use and zoning designation. As such, the proposed Project would not conflict with the goals and objectives of the AQMP. Furthermore, the Project, as evaluated herein would not exceed the regional or localized air quality significance thresholds.

On the basis of the preceding discussion, the Project is determined to be consistent with the AQMP and a less than significant impact is expected.

AIR QUALITY IMPACTS – CONSISTENCY WITH THRESHOLD NO. 2

Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard?

The CAAQS designate the Project site as nonattainment for O_3, PM_{10}, and $PM_{2.5}$ while the NAAQS designates the Project site as nonattainment for O_3 and $PM_{2.5}$.

The SCAQMD has published a report on how to address cumulative impacts from air pollution: White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution (25). In this report the SCAQMD clearly states (Page D-3):

> *"...the SCAQMD uses the same significance thresholds for project specific and cumulative impacts for all environmental topics analyzed in an Environmental Assessment or EIR. The only case where the significance thresholds for project specific and cumulative impacts differ is the Hazard Index (HI) significance threshold for TAC emissions. The project specific (project increment) significance threshold is HI > 1.0 while the cumulative (facility-wide) is HI > 3.0. It should be noted that the HI is only one of three TAC emission significance thresholds considered (when applicable) in a CEQA analysis. The other two are the maximum individual cancer risk (MICR) and the cancer burden, both of which use the same significance thresholds (MICR of 10 in 1 million and cancer burden of 0.5) for project specific and cumulative impacts.*
>
> *Projects that exceed the project-specific significance thresholds are considered by the SCAQMD to be cumulatively considerable. This is the reason project-specific and cumulative significance thresholds are the same. Conversely, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant."*

Therefore, this analysis assumes that individual projects that do not generate operational or construction emissions that exceed the SCAQMD's recommended daily thresholds for project-specific impacts would also not cause a cumulatively considerable increase in emissions for those pollutants for which SCAB is in nonattainment, and, therefore, would not be considered to have a significant, adverse air quality impact. Alternatively, individual project-related construction and operational emissions that exceed SCAQMD thresholds for project-specific impacts would be considered cumulatively considerable.

Construction Impacts

The Project-specific evaluation of emissions presented in the preceding analysis demonstrates that proposed Project construction-source air pollutant emissions would not result in exceedances of regional thresholds. Therefore, proposed Project construction-source emissions would be considered less than significant on a project-specific and cumulative basis.

Operational Impacts

The Project-specific evaluation of emissions presented in the preceding analysis demonstrates that proposed Project operational-source air pollutant emissions would not result in exceedances of regional thresholds. Therefore, the proposed Project operational-source emissions would be considered less than significant on a project-specific and cumulative basis.

AIR QUALITY IMPACTS – CONSISTENCY WITH THRESHOLD NO. 3

Would the expose sensitive receptors to substantial pollutant concentrations?

The potential impact of Project-generated air pollutant emissions at sensitive receptors has also been considered. Results of the LST analysis indicate that the Project will not exceed the SCAQMD localized significance thresholds during construction. Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations during Project construction.

Additionally, the Project will not exceed the SCAQMD localized significance thresholds during operational activity. Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations as the result of Project operations.

CO "HOT SPOT" ANALYSIS

As discussed below, the Project would not result in potentially adverse CO concentrations or "hot spots." Further, detailed modeling of Project-specific CO "hot spots" is not needed to reach this conclusion. An adverse CO concentration, known as a "hot spot", would occur if an exceedance of the state one-hour standard of 20 parts per million (ppm) or the eight-hour standard of 9 ppm were to occur.

It has long been recognized that CO hotspots are caused by vehicular emissions, primarily when idling at congested intersections. In response, vehicle emissions standards have become increasingly stringent in the last twenty years. Currently, the allowable CO emissions standard in California is a maximum of 3.4 grams/mile for passenger cars (there are requirements for certain vehicles that are more stringent). With the turnover of older vehicles, introduction of cleaner fuels, and implementation of increasingly sophisticated and efficient emissions control technologies, CO concentration in the SCAB is now designated as attainment. To establish a more accurate record of baseline CO concentrations affecting the SCAB, a CO "hot spot" analysis was conducted in 2003 for four busy intersections in Los Angeles at the peak morning and afternoon time periods. This "hot spot" analysis did not predict any violation of CO standards, as shown on Table 11.

TABLE 11: CO MODEL RESULTS

Intersection Location	CO Concentrations (ppm)		
	Morning 1-hour	Afternoon 1-hour	8-hour
Wilshire Boulevard/Veteran Avenue	4.6	3.5	3.7
Sunset Boulevard/Highland Avenue	4	4.5	3.5
La Cienega Boulevard/Century Boulevard	3.7	3.1	5.2
Long Beach Boulevard/Imperial Highway	3	3.1	8.4

Notes: Federal 1-hour standard is 35 ppm and the deferral 8-hour standard is 9.0 ppm.

Based on the SCAQMD's 2003 AQMP and the 1992 Federal Attainment Plan for Carbon Monoxide (1992 CO Plan), peak carbon monoxide concentrations in the SCAB were a result of unusual meteorological and topographical conditions and not a result of traffic volumes and congestion at a particular intersection. As evidence of this, for example, 8.4 ppm 8-hr CO concentration measured at the Long Beach Blvd. and Imperial Hwy. intersection (highest CO generating intersection within the "hot spot" analysis), only 0.7 ppm was attributable to the traffic volumes and congestion at this intersection; the remaining 7.7 ppm were due to the ambient air measurements at the time the 2003 AQMP was prepared (26). In contrast, an adverse CO concentration, known as a "hot spot", would occur if an exceedance of the state one-hour standard of 20 parts per million (ppm) or the eight-hour standard of 9 ppm were to occur.

Similar considerations are also employed by other Air Districts when evaluating potential CO concentration impacts. More specifically, the Bay Area Air Quality Management District (BAAQMD) concludes that under existing and future vehicle emission rates, a given project would have to increase traffic volumes at a single intersection by more than 44,000 vehicles per hour (vph)—or 24,000 vph where vertical and/or horizontal air does not mix—in order to generate a significant CO impact (27). Traffic volumes generating the CO concentrations for the "hot spot" analysis is shown on Table 12. The busiest intersection evaluated was that at Wilshire Boulevard and Veteran Avenue, which has a daily traffic volume of approximately 100,000 vph and AM/PM traffic volumes of 8,062 vph and 7,719 vph respectively (28). The 2003 AQMP estimated that the 1-hour concentration for this intersection was 4.6 ppm; this indicates that, should the daily traffic volume increase four times to 400,000 vehicles per day, CO concentrations (4.6 ppm x 4= 18.4 ppm) would still not likely exceed the most stringent 1-hour CO standard (20.0 ppm). Since the Project will generate a reduction in approximately -770 net ADT, the Project would not generate sufficient ADT to cause a CO hotspot.

TABLE 12: CO MODEL RESULTS

Intersection Location	Peak Traffic Volumes (vph)				
	Eastbound (AM/PM)	Westbound (AM/PM)	Southbound (AM/PM)	Northbound (AM/PM)	Total (AM/PM)
Wilshire Boulevard/Veteran Avenue	4,954/2,069	1,830/3,317	721/1,400	560/933	8,062/7,719
Sunset Boulevard/Highland Avenue	1,417/1,764	1,342/1,540	2,304/1,832	1,551/2,238	6,614/5,374
La Cienega Boulevard/Century Boulevard	2,540/2,243	1,890/2,728	1,384/2,029	821/1,674	6,634/8,674
Long Beach Boulevard/Imperial Highway	1,217/2,020	1,760/1,400	479/944	756/1,150	4,212/5,514

AIR QUALITY IMPACTS – CONSISTENCY WITH THRESHOLD NO. 4

Would the Project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

The potential for the Project to generate objectionable odors has also been considered. Land uses generally associated with odor complaints include:

- Agricultural uses (livestock and farming)
- Wastewater treatment plants
- Food processing plants
- Chemical plants
- Composting operations
- Refineries
- Landfills
- Dairies
- Fiberglass molding facilities

The Project does not contain land uses typically associated with emitting objectionable odors. Potential odor sources associated with the proposed Project may result from construction equipment exhaust and the application of asphalt and architectural coatings during construction activities and the temporary storage of typical solid waste (refuse) associated with the proposed Project's (long-term operational) uses. Standard construction requirements would minimize odor impacts from construct ion. The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction and is thus considered less than significant. It is expected that Project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with the solid waste regulations. The proposed Project would also be required to comply with SCAQMD Rule 402 to prevent occurrences of public nuisances. Therefore, odors associated with the proposed Project construction and operations would be less than significant and no mitigation is required (29).

PROJECT GHG ANALYSIS

CLIMATE CHANGE SETTING

Global climate change (GCC) is the change in average meteorological conditions on the earth with respect to temperature, precipitation, and storms. The majority of scientists believe that the climate shift taking place since the Industrial Revolution is occurring at a quicker rate and magnitude than in the past. Scientific evidence suggests that GCC is the result of increased concentrations of GHGs in the earth's atmosphere, including carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), and fluorinated gases. The majority of scientists believe that this increased rate of climate change is the result of GHGs resulting from human activity and industrialization over the past 200 years.

An individual project like the proposed Project evaluated in this memo cannot generate enough GHG emissions to affect a discernible change in global climate. However, the proposed Project may participate in the potential for GCC by its incremental contribution of GHGs combined with the cumulative increase of all other sources of GHGs, which when taken together constitute potential influences on GCC. Because these changes may have serious environmental consequences, this memo will evaluate the potential for the proposed Project to have a significant effect upon the environment as a result of its potential contribution to the greenhouse effect.

GCC refers to the change in average meteorological conditions on the earth with respect to temperature, wind patterns, precipitation and storms. Global temperatures are regulated by naturally occurring atmospheric gases such as water vapor, CO_2, N_2O, CH_4, hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6). These particular gases are important due to their residence time (duration they stay) in the atmosphere, which ranges from 10 years to more than 100 years. These gases allow solar radiation into the earth's atmosphere, but prevent radioactive heat from escaping, thus warming the earth's atmosphere. GCC can occur naturally as it has in the past with the previous ice ages.

Gases that trap heat in the atmosphere are often referred to as GHGs. GHGs are released into the atmosphere by both natural and anthropogenic activity. Without the natural GHG effect, the earth's average temperature would be approximately 61 degrees Fahrenheit (°F) cooler than it is

currently. The cumulative accumulation of these gases in the earth's atmosphere is considered to be the cause for the observed increase in the earth's temperature.

For the purposes of this analysis, emissions of CO_2, CH_4, and N_2O were evaluated because these gases are the primary contributors to GCC from development projects. Although there are other substances such as fluorinated gases that also contribute to GCC, these fluorinated gases were not evaluated as their sources are not well-defined and do not contain accepted emissions factors or methodology to accurately calculate these gases.

REGULATORY SETTING

Executive Order S-3-05

Former California Governor Arnold Schwarzenegger announced on June 1, 2005, through Executive Order S-3-05, the following reduction targets for GHG emissions:

- By 2010, reduce GHG emissions to 2000 levels.
- By 2020, reduce GHG emissions to 1990 levels.
- By 2050, reduce GHG emissions to 80% below 1990 levels.

The 2050 reduction goal represents what some scientists believe is necessary to reach levels that will stabilize the climate. The 2020 goal was established to be a mid-term target. Because this is an executive order, the goals are not legally enforceable for local governments or the private sector.

Assembly Bill (AB) 32

The California State Legislature enacted AB 32, which requires that GHGs emitted in California be reduced to 1990 levels by the year 2020. "GHGs" as defined under AB 32 include CO_2, CH_4, N_2O, hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6). Since AB 32 was enacted, a seventh chemical, nitrogen trifluoride, has also been added to the list of GHGs. CARB is the state agency charged with monitoring and regulating sources of GHGs. Pursuant to AB 32, CARB adopted regulations to achieve the maximum technologically feasible and cost-effective GHG emission reductions. AB 32 states the following:

"Global warming poses a serious threat to the economic well-being, public health, natural resources, and the environment of California. The potential adverse impacts of global warming include the exacerbation of air quality problems, a reduction in the quality and supply of water to the state from the Sierra snowpack, a rise in sea levels resulting in the displacement of thousands of coastal businesses and residences, damage to marine ecosystems and the natural environment, and an increase in the incidences of infectious diseases, asthma, and other human health-related problems."

CARB approved the 1990 GHG emissions level of 427 million metric ton of CO_2 equivalent per year ($MMTCO_2e$) on December 6, 2007 (30). Therefore, emissions generated in California in 2020 are required to be equal to or less than 427 $MMTCO_2e$. Emissions in 2020 in a "business as usual" (BAU) scenario were estimated to be 596 $MMTCO_2e$, which do not account for reductions from AB 32 regulations (31). At that level, a 28.4% reduction was required to achieve the 427 $MMTCO_2e$ 1990 inventory. In October 2010, CARB prepared an updated BAU 2020 forecast to account for the recession and slower forecasted growth. The forecasted inventory without the benefits of

adopted regulation is now estimated at 545 $MMTCO_2e$. Therefore, under the updated forecast, a 21.7% reduction from BAU is required to achieve 1990 levels (32).

Progress in Achieving AB 32 Targets and Remaining Reductions Required

The State has made steady progress in implementing AB 32 and achieving targets included in Executive Order S-3-05. The progress is shown in updated emission inventories prepared by CARB for 2000 through 2012 (33). The State has achieved the Executive Order S-3-05 target for 2010 of reducing GHG emissions to 2000 levels. As shown below, the 2010 emission inventory achieved this target.

- 1990: 427 $MMTCO_2e$ (AB 32 2020 target)
- 2000: 463 $MMTCO_2e$ (an average 8% reduction needed to achieve 1990 base)
- 2010: 450 $MMTCO_2e$ (an average 5% reduction needed to achieve 1990 base)

CARB has also made substantial progress in achieving its goal of achieving 1990 emissions levels by 2020. As described earlier in this section, CARB revised the 2020 BAU inventory forecast to account for new lower growth projections, which resulted in a new lower reduction from BAU to achieve the 1990 base. The previous reduction from 2020 BAU needed to achieve 1990 levels was 28.4% and the latest reduction from 2020 BAU is 21.7%.

- 2020: 545 $MMTCO_2e$ BAU (an average 21.7% reduction from BAU needed to achieve 1990 base)

Senate Bill (SB) 32

On September 8, 2016, Governor Jerry Brown signed the SB 32 and its companion bill, AB 197. SB 32 requires the state to reduce statewide GHG emissions to 40% below 1990 levels by 2030, a reduction target that was first introduced in Executive Order B-30-15. The new legislation builds upon the AB 32 goal of 1990 levels by 2020 and provides an intermediate goal to achieving S-3-05, which sets a statewide GHG reduction target of 80% below 1990 levels by 2050. AB 197 creates a legislative committee to oversee regulators to ensure that CARB not only responds to the Governor, but also the Legislature (34).

AB 197

A condition of approval for SB 32 was the passage of AB 197. AB 197 requires that CARB consider the social costs of GHG emissions and prioritize direct reductions in GHG emissions at mobile sources and large stationary sources. AB 197 also gives the California legislature more oversight over CARB through the addition of two legislatively appointed members to the CARB Board and the establishment a legislative committee to make recommendations about CARB programs to the legislature.

Executive Order B-55-18 and SB 100

Executive Order B-55-18 and SB 100. SB 100 and Executive Order B-55-18 were signed by Governor Brown on September 10, 2018. Under the existing RPS, 25% of retail sales are required to be from renewable sources by December 31, 2016, 33% by December 31, 2020, 40% by December 31, 2024, 45% by December 31, 2027, and 50% by December 31, 2030. SB 100 raises California's RPS requirement to 50% renewable resources target by December 31, 2026, and to achieve a 60% target by December 31, 2030. SB 100 also requires that retail sellers and local

publicly owned electric utilities procure a minimum quantity of electricity products from eligible renewable energy resources so that the total kilowatt hours of those products sold to their retail end-use customers achieve 44% of retail sales by December 31, 2024, 52% by December 31, 2027, and 60% by December 31, 2030. In addition to targets under AB 32 and SB 32, Executive Order B-55-18 establishes a carbon neutrality goal for the state of California by 2045; and sets a goal to maintain net negative emissions thereafter. The Executive Order directs the California Natural Resources Agency (CNRA), California Environmental Protection Agency (CalEPA), the Department of Food and Agriculture (CDFA), and CARB to include sequestration targets in the Natural and Working Lands Climate Change Implementation Plan consistent with the carbon neutrality goal.

Title 24 California Code of Regulations (CCR)

California Code of Regulations (CCR) Title 24 Part 6: The California Energy Code was first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption.

The standards are updated periodically to allow consideration and possible incorporation of new energy efficient technologies and methods. CCR, Title 24, Part 11: California Green Building Standards Code (CALGreen) is a comprehensive and uniform regulatory code for all residential, industrial, commercial, and school buildings that went in effect on August 1, 2009, and is administered by the California Building Standards Commission.

CALGreen is updated on a regular basis, with the most recent approved update consisting of the 2022 California Green Building Code Standards that was effective on January 1, 2023[7]. As construction of the Project is anticipated to be completed in 2025, the Project would be required to comply with the Title 24 standards in place at that time.

SCAQMD

SCAQMD is the agency responsible for air quality planning and regulation in the SCAB. The SCAQMD addresses the impacts to climate change of projects subject to SCAQMD permit as a lead agency if they are the only agency having discretionary approval for the project and acts as a responsible agency when a land use agency must also approve discretionary permits for the project. The SCAQMD acts as an expert commenting agency for impacts to air quality. This expertise carries over to GHG emissions, so the agency helps local land use agencies through the development of models and emission thresholds that can be used to address GHG emissions.

In 2008, SCAQMD formed a Working Group to identify GHG emissions thresholds for land use projects that could be used by local lead agencies in the SCAB. The Working Group developed several different options that are contained in the SCAQMD Draft Guidance Document – Interim CEQA GHG Significance Threshold, that could be applied by lead agencies. The working group has not provided additional guidance since release of the interim guidance in 2008. The SCAQMD Board has not approved the thresholds; however, the Guidance Document provides substantial evidence supporting the approaches to significance of GHG emissions that can be considered by the lead agency in adopting its own threshold. The current interim thresholds consist of the following tiered approach:

[7] The 2022 California Green Building Standard Code will be published July 1, 2022.

- Tier 1 consists of evaluating whether or not the project qualifies for any applicable exemption under CEQA.
- Tier 2 consists of determining whether the project is consistent with a GHG reduction plan. If a project is consistent with a qualifying local GHG reduction plan, it does not have significant GHG emissions.
- Tier 3 consists of screening values, which the lead agency can choose, but must be consistent with all projects within its jurisdiction. A project's construction emissions are averaged over 30 years and are added to the project's operational emissions. If a project's emissions are below one of the following screening thresholds, then the project is less than significant:
    - Residential and commercial land use: 3,000 metric ton of CO_2 equivalent ($MTCO_2e/yr$)
    - Industrial land use: 10,000 $MTCO_2e/yr$
    - Based on land use type: residential: 3,500 $MTCO_2e/yr$; commercial: 1,400 $MTCO_2e/yr$; or mixed use: 3,000 $MTCO_2e/yr$
- Tier 4 has the following options:
    - Option 1: Reduce Business-as-Usual (BAU) emissions by a certain percentage; this percentage is currently undefined.
    - Option 2: Early implementation of applicable AB 32 Scoping Plan measures
    - Option 3: 2020 target for service populations (SP), which includes residents and employees: 4.8 $MTCO_2e$ per SP per year for projects and 6.6 $MTCO_2e$ per SP per year for plans;
    - Option 3, 2035 target: 3.0 $MTCO_2e$ per SP per year for projects and 4.1 $MTCO_2e$ per SP per year for plans
- Tier 5 involves mitigation offsets to achieve target significance threshold.

The SCAQMD's interim thresholds used the Executive Order S-3-05-year 2050 goal as the basis for the Tier 3 screening level. Achieving the Executive Order's objective would contribute to worldwide efforts to cap CO_2 concentrations at 450 ppm, thus stabilizing global climate.

SCAQMD only has authority over GHG emissions from development projects that include air quality permits. At this time, it is unknown if the project would include stationary sources of emissions subject to SCAQMD permits. Notwithstanding, if the Project requires a stationary permit, it would be subject to the applicable SCAQMD regulations.

SCAQMD Regulation XXVII, adopted in 2009 includes the following rules:

- Rule 2700 defines terms and post global warming potentials.
- Rule 2701, Southern California (SoCal) Climate Solutions Exchange, establishes a voluntary program to encourage, quantify, and certify voluntary, high quality certified GHG emission reductions in the SCAQMD.

- Rule 2702, GHG Reduction Program created a program to produce GHG emission reductions within the SCAQMD. The SCAQMD will fund projects through contracts in response to requests for proposals or purchase reductions from other parties.

SCAQMD is the agency responsible for air quality planning and regulation in the SCAB. The SCAQMD addresses the impacts to climate change of projects subject to SCAQMD permit as a lead agency if they are the only agency having discretionary approval for the project and acts as a responsible agency when a land use agency must also approve discretionary permits for the project. The SCAQMD acts as an expert commenting agency for impacts to air quality. This expertise carries over to GHG emissions, so the agency helps local land use agencies through the development of models and emission thresholds that can be used to address GHG emissions.

City of Ontario Community Climate Action Plan (CCAP)

The Community Climate Action Plan (CCAP) contains further guidance on the City of Ontario's GHG Inventory reduction goals, policies, guidelines, and implementation programs. The purpose of the CCAP is to provide guidance on how to analyze GHG emissions and determine significance during the CEQA review of proposed development projects within the City of Ontario (35). The CCAP builds upon the Reduction Plan to address City-specific information and City-specific GHG reduction measures. To address the state's requirement to reduce GHG emissions, the CCAP was prepared with the goal of reducing GHG emissions within the City by 15% below 2008 levels by the year 2020. The City's target is consistent with the AB 32 target and ensures that the City of Ontario achieves GHG reductions locally that complement and are consistent with state efforts to reduce GHG emissions.

As part of the CCAP, the City of Ontario published a guidance document titled "Greenhouse Gas Emissions, CEQA Thresholds and Screening Tables" (December 2014). As part of this guidance, the CCAP determined that if GHG emissions of a given project exceeds 3,000 MTCO2e/yr, then project emissions would need to be reduced by 25 percent when compared to year 2008 emissions levels. Alternatively, the project would need to achieve a minimum of 100 points pursuant to measures identified in the Screening Tables.

The 2022 update to the Ontario Plan includes an update to the City's CCAP which was originally adopted on December 16, 2014. As stated in The Ontario Plan 2050 Draft Supplemental Environmental Impact Report (SEIR), the measures included in the 2022 update to the CCAP are not substantially different than that of the 2014 CCAP and therefore there is no change in the environmental impacts associated with the CCAP (36).

GHG IMPACTS

Standards of Significance

According to the CEQA Guidelines Appendix G thresholds, to determine whether impacts from GHG emissions are significant. Would the project:

- **Threshold 1**: Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment?
- **Threshold 2**: Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of GHGs?

The evaluation of an impact under CEQA requires measuring data from a project against both existing conditions and a "threshold of significance." For establishing significance thresholds, the Office of Planning and Research's amendments to the CEQA Guidelines Section 15064.7(c) state "[w]hen adopting thresholds of significance, a lead agency may consider thresholds of significance previously adopted or recommended by other public agencies, or recommended by experts, provided the decision of the lead agency to adopt such thresholds is supported by substantial evidence."

Discussion on Establishment of Significance Thresholds

As previously stated, SEIR identifies that the measures included in the 2022 update to the CCAP are not substantially different than that of the 2014 CCAP and therefore there is no change in the environmental impacts associated with the CCAP. As such, and consistent with the 2014 CCAP, this analysis relies on the annual screening threshold of 3,000 $MTCO_2e$/yr to define small projects that are considered less than significant and do not require further GHG emissions calculations or analysis. Projects that do not exceed an annual 3,000 $MTCO_2e$/yr are therefore considered less than significant and would not require further analysis or mitigation.

GHG IMPACTS – CONSISTENCY WITH THRESHOLD NO. 1

Would the Project have the potential to generate direct or indirect GHG emissions that would result in a significant impact on the environment?

PROJECT GHG EMISSIONS

The estimated GHG emissions for the Project land use are summarized on Table 13. The estimated GHG emission include emissions from Carbon Dioxide (CO_2), Methane (CH_4), Nitrous Oxide (N_2O), and Refrigerants (R). As shown on Table 13, the Project would generate a total of approximately 3,557.75 $MTCO_2e$/yr. Detailed operation model outputs for the proposed Project are presented in Attachment A.

TABLE 13: TOTAL PROJECT GHG EMISSIONS

Source	Emission (lbs/day)				
	CO_2	CH_4	N_2O	R	Total CO_2e
Annual construction-related emissions amortized over 30 years	27.07	1.33E-03	1.33E-03	1.93E-02	27.53
Mobile Source	1,927.00	0.09	0.15	3.62	1,978.00
Area Source	6.99	< 0.005	< 0.005	0.00	7.02
Energy Source	775.00	0.07	0.01	0.00	779.00
Water Source	113.00	2.60	0.06	0.00	196.00
Waste Source	28.90	2.89	0.00	0.00	101.00
Refrigerants Source	0.00	0.00	0.00	58.20	58.20
On-Site Equipment Source	0.00	0.00	0.00	0.00	94.73
TRU Source	0.00	0.00	0.00	0.00	316.27
Total CO_2e (All Sources)	**3,557.75**				

TOP 2050 GHG EMISSIONS

The estimated GHG emissions from the TOP 2050 adopted Industrial land use designation are summarized on Table 14. Detailed operation model outputs for the TOP 2050 adopted Industrial land use designation are presented in Attachment D.

TABLE 14: TOP 2050 GHG EMISSIONS

Source	Emission (lbs/day)				
	CO_2	CH_4	N_2O	R	Total CO_2e
Mobile Source	4,830.00	0.24	0.30	8.66	4,933.00
Area Source	8.09	< 0.005	< 0.005	0.00	8.33
Energy Source	694.00	0.06	< 0.005	0.00	697.00
Water	129.00	3.01	0.07	0.00	225.00
Waste	33.50	3.34	0.00	0.00	117.00
Refrigerants	0.00	0.00	0.00	67.30	67.30
Total CO_2e (All Sources)	**6,047.63**				

PROJECT NET NEW GHG EMISSIONS – COMPARISON TO TOP 2050

Table 15 shows the Project is anticipated to generate less GHG emissions per day as compared to emissions generated by the TOP 2050 adopted Industrial land use designation.

TABLE 15: PROJECT NET NEW GHG EMISSIONS

Emission Source	Total CO_2e
Proposed Project	3,557.75
TOP 2050	6,047.63
Net Emissions (Proposed – TOP 2050)	**-2,489.88**

EXISTING BUILDING GHG EMISSIONS

The estimated GHG emissions from the existing buildings are summarized on Table 16. Detailed operation model outputs for the existing buildings are presented in Attachment C.

TABLE 16: EXISTING BUILDING GHG EMISSIONS

Source	Emission (lbs/day)				
	CO_2	CH_4	N_2O	R	Total CO_2e
Mobile Source	1,445.00	0.06	0.06	3.22	1,467.00
Area Source	3.28	< 0.005	< 0.005	0.00	3.37
Energy Source	612.00	0.06	< 0.005	0.00	614.00
Water	21.20	0.50	0.01	0.00	37.20
Waste	55.10	5.51	0.00	0.00	193.00
Refrigerants	0.00	0.00	0.00	212.00	212.00
On-Site Cargo Equipment	0.00	0.00	0.00	0.00	94.73
Total CO_2e (All Sources)	**2,621.30**				

PROJECT NET NEW GHG EMISSIONS – COMPARISON TO EXISTING BUILDING

Table 17 shows the Project is anticipated to generate more GHG emissions per day as compared to emissions generated by the existing building, additionally; the proposed Projects emissions would still be less than the applicable thresholds.

TABLE 17: PROJECT NET NEW GHG EMISSIONS

Emission Source	Total CO_2e
Proposed Project	3,557.75
Existing Building	2,621.30
Net Emissions (Proposed – Existing)	**936.45**

As discussed within the CCAP, projects that generate less than 3,000 $MTCO_2e$/yr would have a less-than-significant GHG emissions impact. As shown on Table 17, the proposed Project would generate a total of 936.45 $MTCO_2e$/yr and would therefore not exceed the 3,000 $MTCO_2e$/yr significance threshold and a less than significant impact is expected.

GHG IMPACTS – CONSISTENCY WITH THRESHOLD NO. 2

Would the Project have the potential to conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs?

Pursuant to 15604.4 of the CEQA Guidelines, a lead agency may rely on qualitative analysis or performance-based standards to determine the significance of impacts from GHG emissions (37).

The 2022 Scoping Plan for Achieving Carbon Neutrality (2022 Scoping Plan) lays out a path to achieve targets for carbon neutrality and reduce anthropogenic greenhouse gas (GHG) emissions by 85 percent below 1990 levels no later than 2045, as directed by Assembly Bill 1279. The actions and outcomes in the plan will achieve significant reductions in fossil fuel combustion by deploying clean technologies and fuels, further reductions in short-lived climate pollutants, support for sustainable development, increased action on natural and working lands to reduce emissions and sequester carbon, and the capture and storage of carbon (38).

Finally, the Project is consistent with the general plan land use designation, density, building intensity, and applicable policies specified for the Project area in SCAG's Sustainable Community Strategy/ Regional Transportation Plan, which pursuant to SB 375 calls for the integration of transportation, land-use and housing policies to plan for achievement of the GHG-emissions target for the region. Thus, a less than significant impact related to GHG emissions from Project construction and operation would occur and no mitigation is required.

CONCLUSION

Results of the assessment indicate that the Project is not anticipated to result in a significant impact during construction or operational activities associated with air quality and GHG.

CALEEMOD PROPOSED PROJECT EMISSIONS MODEL OUTPUTS

15364 - Woodruff Way Logistics Center Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	15364 - Woodruff Way Logistics Center
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.80
Precipitation (days)	20.8
Location	34.049207, -117.552997
County	San Bernardino-South Coast
City	Ontario
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	5284
EDFZ	10
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Unrefrigerated Warehouse-No Rail	293	1000sqft	6.73	292,976	110,740	—	—	—
Refrigerated Warehouse-No Rail	51.7	1000sqft	1.19	51,702	0.00	—	—	—

Parking Lot	264	Space	2.38	0.00	0.00	—	—	—
Other Non-Asphalt Surfaces	6.46	Acre	6.46	0.00	0.00	—	—	—
User Defined Industrial	345	User Defined Unit	0.00	0.00	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Un/Mit.	TOG	ROG	NOx	CO	SO2	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	BCO2	NBCO2	CO2T	CH4	N2O	R	CO2e
Daily, Summer (Max)	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—
Unmit.	4.45	60.2	36.1	41.2	0.06	1.60	6.80	7.95	1.47	2.74	4.22	—	8,336	8,336	0.64	0.77	13.7	8,459

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	20.2	annual days of extreme heat
Extreme Precipitation	3.05	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	4.39	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A

Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	91.1
AQ-PM	95.7
AQ-DPM	96.6
Drinking Water	93.3
Lead Risk Housing	8.61
Pesticides	0.00
Toxic Releases	78.9
Traffic	89.1
Effect Indicators	—

CleanUp Sites	0.00
Groundwater	30.9
Haz Waste Facilities/Generators	78.8
Impaired Water Bodies	0.00
Solid Waste	70.4
Sensitive Population	—
Asthma	47.3
Cardio-vascular	67.3
Low Birth Weights	57.1
Socioeconomic Factor Indicators	—
Education	40.5
Housing	32.3
Linguistic	18.1
Poverty	23.9
Unemployment	53.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	76.78686
Employed	63.51854228
Median HI	68.57436161
Education	—
Bachelor's or higher	44.59129988
High school enrollment	3.977928911
Preschool enrollment	15.60374695

Transportation	—
Auto Access	88.68215065
Active commuting	10.11163865
Social	—
2-parent households	11.86962659
Voting	50.91749006
Neighborhood	—
Alcohol availability	69.3314513
Park access	61.63223406
Retail density	69.31861927
Supermarket access	2.399589375
Tree canopy	29.69331451
Housing	—
Homeownership	78.81432054
Housing habitability	80.20017965
Low-inc homeowner severe housing cost burden	88.74631079
Low-inc renter severe housing cost burden	37.86731682
Uncrowded housing	60.77248813
Health Outcomes	—
Insured adults	67.2783267
Arthritis	74.6
Asthma ER Admissions	54.3
High Blood Pressure	79.9
Cancer (excluding skin)	68.9
Asthma	49.0
Coronary Heart Disease	85.5
Chronic Obstructive Pulmonary Disease	74.0

Diagnosed Diabetes	64.3
Life Expectancy at Birth	52.5
Cognitively Disabled	87.2
Physically Disabled	77.4
Heart Attack ER Admissions	10.4
Mental Health Not Good	50.5
Chronic Kidney Disease	79.8
Obesity	43.5
Pedestrian Injuries	99.0
Physical Health Not Good	58.2
Stroke	80.6
Health Risk Behaviors	—
Binge Drinking	19.3
Current Smoker	53.5
No Leisure Time for Physical Activity	61.3

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	65.0
Healthy Places Index Score for Project Location (b)	42.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	Taken from client data Building, Paving, and Architectural Coating overlap to present a conservative analysis

Construction: Off-Road Equipment	T/L/Bs replaced with Crawler Tractor to accurately calculate disturbance for Site Preparation and Grading phases Standard 8 hours work days
Construction: Trips and VMT	Vendor Trips adjusted based on CalEEMod defaults for Building Construction and number of days for Demolition, Site Preparation, Grading, and Building Construction
Construction: Architectural Coatings	SCAQMD Rule 1113
Operations: Vehicle Data	Trip characteristics based on information provided in the Traffic Analysis
Operations: Fleet Mix	Passenger Car Mix estimated based on CalEEMod default fleet mix and the ratio of the vehicle classes (LDA, LDT1, LDT2, MDV, MCY). Truck Fleet Mix based on 2, 3 and 4 axle trucks
Operations: Architectural Coatings	SCAQMD Rule 1113
Operations: Refrigerants	As of 1 January 2022, new commercial refrigeration equipment may not use refrigerants with a GWP of 150 or greater. Further, R-404A (the CalEEMod default) is unacceptable for new supermarket and cold storage systems as of 1 January 2019 and 2023, respectively.

CALEEMOD PROPOSED PROJECT OPERATIONAL LST EMISSIONS MODEL OUTPUTS

15364 - Woodruff Way Logistics Center (Operational LSTs) Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	15364 - Woodruff Way Logistics Center (Operational LSTs)
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.80
Precipitation (days)	20.8
Location	34.049207, -117.552997
County	San Bernardino-South Coast
City	Ontario
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	5284
EDFZ	10
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Unrefrigerated Warehouse-No Rail	293	1000sqft	6.73	292,976	110,740	—	—	—
Refrigerated Warehouse-No Rail	51.7	1000sqft	1.19	51,702	0.00	—	—	—

Parking Lot	264	Space	2.38	0.00	0.00	—	—	—
Other Non-Asphalt Surfaces	6.46	Acre	6.46	0.00	0.00	—	—	—
User Defined Industrial	345	User Defined Unit	0.00	0.00	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

2.4. Operations Emissions Compared Against Thresholds

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	20.2	annual days of extreme heat
Extreme Precipitation	3.05	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	4.39	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A

Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	91.1
AQ-PM	95.7
AQ-DPM	96.6
Drinking Water	93.3
Lead Risk Housing	8.61
Pesticides	0.00
Toxic Releases	78.9
Traffic	89.1
Effect Indicators	—
CleanUp Sites	0.00
Groundwater	30.9
Haz Waste Facilities/Generators	78.8
Impaired Water Bodies	0.00
Solid Waste	70.4
Sensitive Population	—
Asthma	47.3
Cardio-vascular	67.3
Low Birth Weights	57.1
Socioeconomic Factor Indicators	—
Education	40.5
Housing	32.3
Linguistic	18.1
Poverty	23.9

Unemployment	53.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	76.78686
Employed	63.51854228
Median HI	68.57436161
Education	—
Bachelor's or higher	44.59129988

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	65.0
Healthy Places Index Score for Project Location (b)	42.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	Taken from client data Building, Paving, and Architectural Coating overlap to present a conservative analysis
Construction: Off-Road Equipment	T/L/Bs replaced with Crawler Tractor to accurately calculate disturbance for Site Preparation and Grading phases Standard 8 hours work days
Construction: Trips and VMT	Vendor Trips adjusted based on CalEEMod defaults for Building Construction and number of days for Demolition, Site Preparation, Grading, and Building Construction
Construction: Architectural Coatings	SCAQMD Rule 1113
Operations: Vehicle Data	Trip characteristics based on information provided in the Traffic Analysis
Operations: Fleet Mix	Passenger Car Mix estimated based on CalEEMod default fleet mix and the ratio of the vehicle classes (LDA, LDT1, LDT2, MDV, MCY). Truck Fleet Mix based on 2, 3 and 4 axle trucks
Operations: Architectural Coatings	SCAQMD Rule 1113
Operations: Refrigerants	As of 1 January 2022, new commercial refrigeration equipment may not use refrigerants with a GWP of 150 or greater. Further, R-404A (the CalEEMod default) is unacceptable for new supermarket and cold storage systems as of 1 January 2019 and 2023, respectively.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	20.2	annual days of extreme heat
Extreme Precipitation	3.05	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	4.39	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A

Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	91.1
AQ-PM	95.7
AQ-DPM	96.6
Drinking Water	93.3
Lead Risk Housing	8.61
Pesticides	0.00
Toxic Releases	78.9
Traffic	89.1
Effect Indicators	—
CleanUp Sites	0.00
Groundwater	30.9
Haz Waste Facilities/Generators	78.8
Impaired Water Bodies	0.00
Solid Waste	70.4

Sensitive Population	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	65.0
Healthy Places Index Score for Project Location (b)	42.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Taken from client data
Operations: Vehicle Data	Trip characteristics taken from Trip Generation Assessment
Operations: Fleet Mix	Passenger Car Mix estimated based on CalEEMod default fleet mix and the ratio of the vehicle classes (LDA, LDT1, LDT2, MDV, MCY). Truck Fleet Mix based on 2, 3 and 4 axle trucks
Operations: Architectural Coatings	SCAQMD Rule 1113
Operations: Refrigerants	As of 1 January 2022, new commercial refrigeration equipment may not use refrigerants with a GWP of 150 or greater. Further, R-404A (the CalEEMod default) is unacceptable for new supermarket and cold storage systems as of 1 January 2019 and 2023, respectively.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	20.2	annual days of extreme heat
Extreme Precipitation	3.05	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth

Wildfire	4.39	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3

Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	91.1
AQ-PM	95.7
AQ-DPM	96.6
Drinking Water	93.3
Lead Risk Housing	8.61
Pesticides	0.00
Toxic Releases	78.9
Traffic	89.1

Effect Indicators	—
CleanUp Sites	0.00
Groundwater	30.9
Haz Waste Facilities/Generators	78.8
Impaired Water Bodies	0.00
Solid Waste	70.4
Sensitive Population	—
Asthma	47.3
Cardio-vascular	67.3
Low Birth Weights	57.1
Socioeconomic Factor Indicators	—
Education	40.5
Housing	32.3
Linguistic	18.1
Poverty	23.9
Unemployment	53.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	76.78686
Employed	63.51854228
Median HI	68.57436161
Education	—
Bachelor's or higher	44.59129988
High school enrollment	3.977928911

Retail density	69.31861927
Supermarket access	2.399589375
Tree canopy	29.69331451
Housing	—
Homeownership	78.81432054
Housing habitability	80.20017965
Low-inc homeowner severe housing cost burden	88.74631079
Low-inc renter severe housing cost burden	37.86731682
Uncrowded housing	60.77248813
Health Outcomes	—
Insured adults	67.2783267
Arthritis	74.6
Asthma ER Admissions	54.3
High Blood Pressure	79.9
Cancer (excluding skin)	68.9
Asthma	49.0
Coronary Heart Disease	85.5

Chronic Obstructive Pulmonary Disease	74.0
Diagnosed Diabetes	64.3
Life Expectancy at Birth	52.5
Cognitively Disabled	87.2
Physically Disabled	77.4
Heart Attack ER Admissions	10.4
Mental Health Not Good	50.5
Chronic Kidney Disease	79.8
Obesity	43.5
Pedestrian Injuries	99.0
Physical Health Not Good	58.2
Stroke	80.6
Health Risk Behaviors	—
Binge Drinking	19.3
Current Smoker	53.5
No Leisure Time for Physical Activity	61.3
Climate Change Exposures	—
Wildfire Risk	0.0
SLR Inundation Area	0.0
Children	32.5
Elderly	84.2
English Speaking	91.4
Foreign-born	35.9
Outdoor Workers	45.5
Climate Change Adaptive Capacity	—
Impervious Surface Cover	76.5
Traffic Density	89.2

Traffic Access	46.3
Other Indices	—
Hardship	44.0
Other Decision Support	—
2016 Voting	74.5

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	65.0
Healthy Places Index Score for Project Location (b)	42.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Operations: Vehicle Data	Trip Characteristics based on information provided in the Traffic Analysis

Operations: Fleet Mix	Passenger Car Mix estimated based on CalEEMod default fleet mix and the ratio of the vehicle classes (LDA, LDT1, LDT2, MDV, MCY). Truck Fleet Mix based on 2, 3 and 4 axle trucks
Operations: Refrigerants	Per 17 CCR 95371, new refrigeration equipment containing >50 lbs of refrigerant in new facilities is prohibited from utilizing refrigerants with a GWP of 150 or greater as of 1 Jan 2022.

RE: Cultural Resources Records Search Results for the Woodruff Logistics Center Project, Ontario, California

Dear Ms. Chu:

An archaeological records search has been completed for the Woodruff Logistics Center Project located at 1350 and 1375 South Woodruff Way, in the city of Ontario, San Bernardino County, California. The project includes the proposed construction of an industrial structure within Assessor's Parcel Numbers 238-221-22 and 238-201-41. As part of the environmental review process, BFSA Environmental Services, a Perennial Company (BFSA), reviewed the results of the records search from the South Central Coastal Information Center at California State University, Fullerton. The records search, which was completed on January 18, 2023, encompassed an area of one mile surrounding the project.

Based upon the records search results, one resource has been recorded within one mile of the project, which is not within the project boundaries. The resource is a historic railroad.

The records search results also indicate that 18 previous studies have been conducted within one mile of the project, one of which overlaps the entire subject property (Smith and Lerch 1981). This study was conducted in 1981 for the construction of the proposed Ontario Industrial Park. It found no cultural resources in the study area. One study is directly adjacent to the subject property (Davis 1988). Conducted in 1988 in anticipation of development, the survey found no cultural resources.

BFSA requested a review of the Sacred Lands Files (SLF) by the Native American Heritage Commission (NAHC) on January 16, 2023, to determine if any recorded Native American sacred sites or locations of religious or ceremonial importance are present within one mile of the project. The NAHC SLF search did not indicate the presence of sacred sites or locations of religious or ceremonial importance within the search radius. This request is not part of any Assembly Bill 52 Native American consultation.

The full results of the completed records search are attached to this letter report (Attachments A and B). Please contact us should you have any questions or require additional studies for this project.

Regards,

Brian F. Smith

CALIFORNIA HISTORICAL RESOURCES INFORMATION SYSTEMS

RECORDS SEARCH

Company:	BFSA Environmental Services, a Perennial Company
Processed By:	Emily T. Soong
Date Processed:	January 18, 2023
Project Identification:	Woodruff Logistics Center
Information Center:	South Central Coastal Information Center
Search Radius:	1 Mile Buffer

Historical Resources:

Trinomial and Primary site maps have been reviewed. All sites within the project boundaries and the specified radius of the project area have been plotted. Copies of the site record forms have been reviewed for all recorded sites.

There is one resources located within a mile radius of the current project area, which is not located within the subject property.

Previous Survey Report Boundaries:

Project boundary maps have been reviewed. National Archaeological Database (NADB) citations for reports within the project boundaries and within the specified radius of the project area have been reviewed.

There are 18 reports within a mile radius of the current project area, one of which overlaps with the property (SB-01180) and is one directly adjacent to the property (SB-02194).

September 1981

INTRODUCTION

Purpose:

This report is a cultural resources assessment for the proposed Ontario Industrial Park, which will be located in the City of Ontario, San Bernardino County, California. The report was prepared by the San Bernardino County Museum Association at the request of Jean Gath of the SWA Group and William A. Budge of Ontario Industrial Partners, in order to comply with federal, state, and local laws and ordinances requiring environmental assessments of projects which might cause an adverse impact to the existing environment. This assessment deals specifically with potential impacts to cultural resources by the proposed project.

The study was conducted in order to locate and evaluate any archaeological or historical sites which might be impacted by the Ontario Industrial Park, and to make recommendations to mitigate any such impacts, should they be found to exist. The assessment included a records check for previously recorded archaeological sites in the area, a review of pertinent archaeological, ethnographic, and historic literature, and a field reconnaissance of the project site.

No cultural resources were found to exist within the project site boundaries, and no adverse impacts to cultural resources are anticipated due to the proposed project.

Project:

The proposed Ontario Industrial Park involves the development of approxi-

mately 1,500 acres of land east of Ontario International Airport as an industrial park which will be served by both rail and air freight. The existing land use of vineyard agriculture will be replaced by an intensive development for industrial use which will include approximately 10-12 miles of new street construction, three taxiways connected with the airport, and up to two miles of rail spurs connected with both Southern Pacific and Union Pacific Railroads.

It is presumed that all existing features within the project site will be disturbed by the proposed project, and that any cultural resources which might be present would be subject to an adverse impact.

Project Site:

The project site is located in southwestern San Bernardino County in the City of Ontario. It is directly east of the Ontario International Airport, and located between the Southern Pacific Railroad Mainline on the north and the Union Pacific Mainline on the south. Thus it comprises an ideal location for such a facility as is proposed, due to the proximity of existing well developed transportation networks. Interstates 10 and 15 are located adjacent to the northern and eastern boundaries of the project site.

The subject property is situated in Sections 25 and 36, T1S, R7W, and Sections 30 and 31, T1S, R6W, SBBM, as shown on the Guasti 7.5' USGS topographic quadrangle (see Map 2). Elevations range from 860 to 960 feet above sea level. The topography is relatively level, consisting of a sandy alluvial plain which is derived from the San Gabriel Mountains to the north and locally known as the Cucamonga Flood Plain. The principal run-off

in the flood plain is carried by Cucamonga, Deer, and Day Creeks, the last of which runs along the eastern boundary of the subject property. All three creeks have had flood control work done on them and now flow through channels with man-made levees on their banks.

Vegetation on the project site is currently composed of vineyard agriculture, but would have originally consisted of species belonging to the Valley Grassland and Coastal Sage Scrub Plant Communities. It would have been dominated by perennial bunch-grasses, sagebrush (Artemisia californica), sages (Salvia sp.), and buckwheat (Eriogonum fasciculatum)(Munz 1974). Historic references by Juan Bautista de Anza and Pedro Font, his priest and diarist, in 1776, indicated that "both men were struck by the sight of the 'rolling grassland' which extended with increasing richness (from their campsite at Jurupa, now Riverside) westward to the site of Los Angeles" Clarke 1979:44,45).

There are no springs or other sources of natural water located on the project site. The closest water source to the study area is the Santa Ana River, which runs southwest approximately 6 miles south.

See Map 3 for the proposed project development plans and for location of non-project land within the study area.

Scope of Study:

This assessment is based on a detailed inventory of all prehistoric cultural resources and historic cultural resources believed to be fifty years of age or older.

CULTURAL BACKGROUND

Archaeological evidence from prehistoric village sites such as those in Cucamonga, Rialto, Colton, and Yucaipa indicate that the San Bernardino Valley has witnessed at least two periods of prehistory. The oldest components of these sites contain artifacts usually attributed to the Milling Stone Horizon, a period which is thought to have begun at least 4,500 years ago (Wallace 1955:221) and possible as early as 8,500 years ago (Meighan 1978:236). Locally, it is reported to span the period from about 3,000 B.C. to A.D. 1,000 (Kowta 1969:90). Evidence for earlier cultural activity in the study area is lacking, possibly for geological reasons (older sites could be buried under the alluvium), although there is ample evidence in the coastal areas of southern California that an Early Hunting Stage was present at least 10,000 years ago (Meighan 1978:238).

The earlier prehistoric period known from the study area, the Milling Stone Horizon, is defined by artifacts such as manos and metates (milling stones) in large numbers, crude percussion flaked stone tools which are mostly choppers and scraper planes, and the enigmatic cog-stones and discoidals. There is a definite paucity of projectile points in the assemblages from the sites of this age, indicating that the people subsisted primarily on plant foods, probably mush made from ground plant seeds. Hunting appears to have played a secondary role in subsistance.

The more recent period in local prehistoric cultural development is termed variously the "Late Prehistoric Cultures" (Wallace 1955:223) or the "Regional Specialization Stage" (Meighan 1978:236). This period encompasses approximately the past 1,000 to 2,000 years, and represents the culture of

populations ancestral to the historic Shoshonean groups which lived in the study area at the time of European contact. The Late Prehistoric Period is characterized by the introduction of brownware pottery and smaller projectile points used for arrow tips. Other artifacts found in sites of this late period include bone awls, stone drills and perforators, steatite cooking stones and arrow-shaft straighteners, and various types of charm stones and crystals. Vegetal food processing tools such as manos and metates, and mortars and pestles also continue to be present in archaeological assemblages from this recent period of prehistory.

The study area was near the boundary between two ethnographic groups of southern California Shoshoneans, the Gabrielino and the Serrano. Both have been placed in the vicinity of the study area by ethnographers working in the region. The village of Cucamonga, located 4 miles northwest of the project site, has been identified as the westernmost settlement of the Serrano (Kroeber 1925:615). Other scholars have attributed it to the Gabrielino, noted its linguistic affinity with that language, and one study has concluded that the site was originally inhabited by the Serrano, with the Gabrielino being brought into the area due to mission activity (Weaver and Garcia 1977). The Santa Ana River as far east as Jurupa (Riverside) was part of Gabrielino territory without question. It would appear that the project site was a resource area which was utilized by both groups.

Despite the lack of water which would preclude a major habitation site being found on the project site, it could well have been used as a collecting area for plant seeds such as chia and buckwheat, and for hunting small game. Known habitation sites are located along the Santa Ana River to the south,

and along the base of the San Gabriel Mountains to the north. The area immediately surrounding the project site, however, does not contain any known archaeological sites, leading to the conclusion that it was not heavily used but rather functioned as a marginal resource area for the populations of the nearby prehistoric settlements.

Historic mention of the study area began as early as 1774, when Anza passed through the area on his way from Sonora to Mission San Gabriel, which had been established three years earlier. In 1810, the mission established a stock ranch in San Bernardino, followed by an Asistencia in 1819. The road from San Gabriel to San Bernardino passed very near to the project site, and may have crossed the northeastern corner of it (Black 1975:vi)

Following the breaking up of the mission in 1834, the area was parceled out in the form of land grants by the Mexican governor in the 1840's. The project site was surrounded by Cucamonga Rancho to the north and Rancho Santa Ana del Chino and Jurupa Rancho to the south. It does not appear to have been included within the official boundaries of any of these but was undoubtedly used as a grazing area for stock from all three. The ranchos were not fenced, and yearly roundups and branding sessions were necessary to separate the stock (Beattie and Beattie 1951).

Vineyard agriculture in the study area has a long history. The Brookside Winery near the northwest corner of the project site was established by Secondo Guasti, a native of Italy. The business was founded in 1832, and is one of the oldest in California (Archer 1974). Guasti was originally the train depot called Cucamonga, the Post Office name Guasti was established in 1910.

METHODS OF DATA COLLECTION USED IN THIS STUDY

Prior to the field portion of this assessment, a records check of the California Archaeological Site Survey files maintained at the San Bernardino County Museum was conducted. No archaeological sites were found to be previously recorded on the project site, nor were any listed within a three mile radius of the project site. No sites listed in the National Register of Historic Places are in the vicinity of the project site. A review of archaeologic, ethnographic, and historic literature did not indicate the presence of any cultural resources on the project site.

On-site field reconnaisance of the project site was accomplished during the last week of August 1981. The project site was surveyed by Dr. Gerald A. Smith, Michael K. Lerch, and William Jenson following parallel transects spaced approximately 30 meters apart. Transects were aligned with rows in the vineyards, which enabled uniform spacing and even coverage of the project area. Ground visibility was excellent and field conditions were conducive to identify any cultural resources which might have been present.

RESULTS OF THE SURVEY

The results of a records check, literature search, and intensive field survey of the Ontario Industrial Park property were that no cultural resources were located within the project boundaries. No subsurface testing was attempted; however, in view of the negative results of the rest of the investigation, it is unlikely that any subsurface cultural deposits exist on the project.

ASSESSMENT OF IMPACTS AND RECOMMENDATION FOR MITIGATION

The results of this study do not indicate that any cultural resources are present on the project site, and thus no adverse impacts to any cultural resources due to the proposed project are anticipated. The surrounding area is also highly disturbed and not known to contain any cultural resources, so no secondary impacts are expected.

No recommendations for further archaeological investigation are made at this time. However, in the event that cultural resources are encountered during the course of construction activities, it is recommended that a qualified archaeologist be consulted.

Lester A. Ross, Center Coordinator
Archæological Information Center
San Bernardino County Museum
2024 Orange Tree Lane
Redlands, California 92374

Dear Dr. Ross

This is in reply to your information request concerning the Amanson Properties investigations. The proposed purchase of the property was not completed and all of the initial work was not completed. An intensive pedestrian survey was carried out and a very brief writeup of the work was prepared. A copy of this information is included. Also included is a xerox copy of the pertinent portion of the Guasti 7.5' quad. The project area is hatched. One hundred percent of the project area was surveyed. No cultural resources were identified.

Sincerely

Gene P. Davis
Staff Archæologist

Cultural Resource Investigation

Archival Research and Record Search

For prehistoric cultural resources, the principal sources of data were the National Register of Historic Places and the Regional office of the California Archæological Inventory held at the San Bernardino County Museum. Historic maps examined included late 1800's General Land Office Plat maps of the area, the 1894 Cucamonga 15' United States Geologic Service quad map, the County of San Bernardino Survey Office Record of Survey for June 1920, and an area map from the 1940's. No structures or other cultural resources were indicated on these maps. The 1976 Scott study of irrigation water systems in the Santa Ana river basin indicated no irrigation ditches, canals, or other facilities on the property during the years 1810 through 1968.

Three cultural resource surveys (Elfend 1978, Leonard 1978, and Smith 1981) have been accomplished for properties near or adjacent to the project area. No cultural resources were identified by these projects.

Results of Research and Record Search

No sites listed in the National Register of Historic places are on or near the property. Results of the record check indicate that there are no recorded historic or prehistoric sites on or adjacent to the project area.

Field Reconnaissance

A complete pedestrian survey of the project area was accomplished in September 1988 by a team of three professional archæologists under the direction of Gene Davis of Dames & Moore. Parallel transects spaced 20 meters apart were used. Surface visibility and field conditions were excellent. The northern half of the project area had recently been used as sheep pasturage, denuding some parts of the parcel of vegetation. Also in the central portion of the site there were eroded remnants of two approximately ten meter diameter by one meter deep excavations. No signs of cultural resources were found in or around these depressions.

Results of Field Reconnaissance

The results of the field survey of the property at I-15 and Jurupa Street indicate that no surface cultural resources are located within the project boundaries. Subsurface testing was not conducted, but it is not likely that subsurface cultural resources exist on the property.

Recommendations

Results of the record search, archival research, and the field reconnaissance do not indicate the presence of any cultural resources. Thus, cultural resources are not expected to constrain development of the property. No recommendation for additional archæological investigation is made at this time. If cultural resources are encountered during project development a qualified archæologist should be consulted.

Re: Request for Sacred Lands File and Native American Contact List for the Woodruff Logistics Center Project, Ontario, San Bernardino County, California.

I would like to request a record search of the Sacred Lands File and a list of appropriate Native American contacts for the following project: Woodruff Logistics Center Project (Project No. 23-017). The project is at 1350 and 1375 South Woodruff Way (APNs 0238-221-22 and 0238-201-41), Ontario, San Bernardino County, California. Specifically, the project is in Section 30, Township 1 South, Range 6 West, projected, in the USGS *Guasti*, California topographic quadrangle. Please find the enclosed map on which the project is delineated.

Thank you for your time.

Sincerely,

Emily T. Soong

Re: Woodruff Logistics Center Project (Project No. 23-017), San Bernardino County

Dear Ms. Soong:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Cameron.vela@nahc.ca.gov.

Sincerely,

Cameron Vela

Project No.: **21G228-1**

Subject: **Geotechnical Investigation**
Proposed Industrial Development
1350 and 1375 South Woodruff Way
Ontario, California

Dear Ms. Hickenbottom:

In accordance with your request, we have conducted a geotechnical investigation at the subject site. We are pleased to present this report summarizing the conclusions and recommendations developed from our investigation.

We sincerely appreciate the opportunity to be of service on this project. We look forward to providing additional consulting services during the course of the project. If we may be of further assistance in any manner, please contact our office.

Respectfully Submitted,

TABLE OF CONTENTS

1.0 EXECUTIVE SUMMARY

Presented below is a brief summary of the conclusions and recommendations of this investigation. Since this summary is not all inclusive, it should be read in complete context with the entire report.

Geotechnical Design Considerations

- Artificial fill soils were encountered at all of the boring locations, extending from the ground surface to depths of 2½ to 4½± feet. The existing fill soils are considered to represent undocumented fill. These soils, in their present condition, are not considered suitable for support of the foundation loads of the new structure.
- The artificial fill soils are underlain by native alluvial soils. Results of laboratory testing indicate that the native alluvium possesses favorable consolidation/collapse characteristics. However, it is anticipated that demolition of the existing structures and associated improvements will cause disturbance of the upper 3 to 5± feet of soil. In addition, the upper 5± of the alluvium possesses loose to medium dense relative densities.
- Remedial grading will be necessary to remove all of the undocumented fill soils in their entirety, the upper portion of the near-surface native alluvial soils, and any soils disturbed during the demolition process, and replace these materials as compacted structural fill soils.

Site Preparation Recommendations

- Demolition of the existing improvements will be necessary to facilitate the construction of the proposed development. Debris resultant from demolition should be disposed of off-site in accordance with local regulations. Alternatively, concrete and asphalt debris may be pulverized to a maximum 2-inch particle size, well mixed with the on-site soils, and incorporated into new structural fills or it may be processed into crushed miscellaneous base.
- Initial site stripping should also include removal of any surficial vegetation from the unpaved areas of the site. This should include any weeds, grasses, shrubs, and trees. Root systems associated with the trees should be removed in their entirety, and the resultant excavations should be backfilled with compacted structural fill soils. These materials should be disposed of off-site.
- Remedial grading is recommended to be performed within the proposed building areas in order to remove all of the undocumented fill soils in their entirety, the upper portion of the near-surface native alluvial soils, and any soils disturbed during the demolition process. The soils within the proposed building areas should be overexcavated to a depth of 5 feet below existing grade and to a depth of at least 3 feet below proposed building pad subgrade elevations. The depth of overexcavation should also be sufficient to remove any existing fill soils.
- The proposed foundation influence zones should be overexcavated to a depth of at least 3 feet below proposed foundation bearing grade, and to an extent equal to the depth of fill placed below the foundation bearing grade, whichever is greater.
- Following completion of the overexcavation, the exposed soils should be scarified to a depth of at least 12 inches and moisture treated to 0 to 4 percent above optimum moisture content. The subgrade soils should then be recompacted to at least 90 percent of the ASTM D-1557

maximum dry density. The previously excavated soils may then be replaced as compacted structural fill.

- The new pavement and flatwork subgrade soils are recommended to be scarified to a depth of 12± inches, thoroughly moisture conditioned and recompacted to at least 90 percent of the ASTM D-1557 maximum dry density.

Foundation Design Recommendations

- Conventional shallow foundations, supported in newly placed compacted fill.
- 2,500 lbs/ft^2 maximum allowable soil bearing pressure.
- Reinforcement consisting of at least two (2) No. 5 rebars (1 top and 1 bottom) in strip footings. Additional reinforcement may be necessary for structural considerations.

Building Floor Slab Design Recommendations

- Conventional Slab-on-Grade: minimum 6 inches thick.
- Modulus of Subgrade Reaction: k = 150 psi/in.
- Reinforcement is not expected to be necessary for geotechnical considerations. The actual thickness and reinforcement of the floor slab should be determined by the structural engineer.

Pavement Design Recommendations

ASPHALT PAVEMENTS (R = 40)					
Materials	**Thickness (inches)**				
	Parking Stalls (TI = 4.0)	Auto Drive Lanes (TI = 5.0)	Truck Traffic		
			(TI = 6.0)	(TI = 7.0)	(TI = 8.0)
Asphalt Concrete	3	3	3½	4	5
Aggregate Base	3	4	6	7	8
Compacted Subgrade (90% minimum compaction)	12	12	12	12	12

PORTLAND CEMENT CONCRETE PAVEMENTS (R = 40)				
Materials	**Thickness (inches)**			
	Automobile Parking and Drive Areas (TI = 5.0)	Truck Traffic		
		(TI =6.0)	(TI =7.0)	(TI =8.0)
PCC	5	5	5½	6½
Compacted Subgrade (95% minimum compaction)	12	12	12	12

2.0 SCOPE OF SERVICES

The scope of services performed for this project was in accordance with our Proposal No. 21P427, dated September 21, 2021. The scope of services included a visual site reconnaissance, subsurface exploration, field and laboratory testing, and geotechnical engineering analysis to provide criteria for preparing the design of the building foundations, building floor slabs, and parking lot pavements along with site preparation recommendations and construction considerations for the proposed development. The evaluation of the environmental aspects of this site was beyond the scope of services for this geotechnical investigation.

3.0 SITE AND PROJECT DESCRIPTION

3.1 Site Conditions

The subject site is located at the address of 1350 and 1375 South Woodruff Way in Ontario, California. The site is bounded to the north by existing commercial buildings, to the west by South Rockefeller Avenue, to the south by East Jurupa Street, and to the east by Highway I-15. Woodruff Way transverses the site in a roughly north to south direction. The general location of the site is illustrated on the Site Location Map, enclosed as Plate 1 in Appendix A of this report.

The site consists of two irregularly-shaped parcels which total 16.06± acres in size. As previously noted, Woodruff Way extends north to south, dividing the site into two (2) parcels, east and west. The site is presently developed as the Citrus Motors automobile dealership. The eastern parcel is developed with one building, 158,000± ft^2 in size, that includes a Ford dealership, service facility and body shop. The western parcel is developed with a 14,000± ft^2 building that is a Kia dealership. Both buildings are surrounded by asphaltic concrete pavements, with some areas of concrete flatwork and landscape planters.

Detailed topographic information was not available at the time of this report. Based on elevations obtained from Google Earth and visual observations made at the time of the subsurface investigation, the western parcel slopes downward to the southeast at a gradient of 1± percent. The western parcel possesses 2 to 4± feet maximum topographic relief. The eastern parcel slopes downward to the southwest at a gradient of less than 1± percent. The eastern parcel possesses 5± feet maximum topographic relief.

3.2 Proposed Development

Two potential site plans depicting the scope of the proposed development were provided by the client. Site Plan 1 depicts a development comprised of a single building, 352,240 ft^2 in size, located in the north-central region of the overall site. This structure would include dock high doors on most of the south side of the building. Site Plan 2 depicts two (2) buildings, one on each side of Woodruff Way. Building 1 will be located on the eastern parcel and will be 236,400± ft^2 in size. This building will include dock doors on the eastern side of the structure. Building 2 will be located on the western parcel and will be 135,870+ ft^2 in size, with dock doors on the eastern side of the structure. We expect that the buildings will be surrounded by asphaltic concrete pavements in the parking and drive areas, Portland cement concrete pavements in the truck court areas, with isolated areas of concrete flatwork and landscape planters. The proposed development will require the abandonment of the portion of Woodruff Way which extends across the project site.

Detailed structural information was not available at the time of this proposal. It is assumed that the new buildings will be single-story structures of tilt-up concrete construction, typically

supported on conventional shallow foundations with a concrete slab-on-grade floor. Based on the assumed construction, maximum column and wall loads are expected to be on the order of 100 kips and 4 to 7 kips per linear foot, respectively.

No significant amounts of below-grade construction, such as basements or crawl spaces, are expected to be included in the proposed development. Based on the assumed topography, cuts and fills of 2 to 4± feet are expected to be necessary to achieve the proposed site grades.

4.0 SUBSURFACE EXPLORATION

4.1 Scope of Exploration/Sampling Methods

The subsurface exploration conducted for this project consisted of seven (7) borings (identified as Boring Nos. B-1 through B-7) advanced to depths of 20 to 25± feet below the existing site 5grades. All of the borings were logged during drilling by a member of our staff.

The borings were advanced with hollow-stem augers by a conventional truck-mounted drilling rig. Representative bulk and relatively undisturbed soil samples were taken during drilling. Relatively undisturbed soil samples were taken with a split barrel "Modified California Sampler" containing a series of one inch long, 2.416± inch diameter brass rings. This sampling method is described in ASTM Test Method D-3550. In-situ samples were also taken using a 1.4± inch inside diameter split spoon sampler, in general accordance with ASTM D-1586. At all of the boring locations these samplers are driven into the ground with successive blows of a 140-pound weight falling 30 inches. The blow counts obtained during driving are recorded for further analysis. Bulk samples were collected in plastic bags to retain their original moisture content. The relatively undisturbed ring samples were placed in molded plastic sleeves that were then sealed and transported to our laboratory.

The approximate locations of the borings are indicated on the Boring Location Plans, included as Plates 2A and 2B in Appendix A of this report. The Boring Logs, which illustrate the conditions encountered at the boring locations, as well as the results of some of the laboratory testing, are included in Appendix B.

4.2 Geotechnical Conditions

Pavements

Asphaltic concrete (AC) pavements were encountered at the ground surface at all of the boring locations. At these locations, the pavement sections consist of 2 to 4± inches of asphaltic concrete, underlain by 4 to 6± inches of aggregate base.

Artificial Fill

Artificial fill soils were encountered beneath the existing pavements at all of the boring locations, extending to depths of 2½ to 4½± feet below the existing site grades. The fill soils generally consist of loose to medium dense silty fine sands, fine sandy silts and fine to medium sands with varying coarse sand and fine to coarse gravel content. The fill soils possess a disturbed appearance, resulting in their classification as artificial fill.

Alluvium

Native alluvium was encountered beneath the artificial fill at all of the boring locations, extending to at least the maximum explored depth of 25± feet below existing site grades. The alluvium consists of loose to medium dense silty fine sands, fine sands, fine to medium sands, and fine sandy silts, with varying fine to coarse gravel content.

Groundwater

Free water was not encountered during the drilling of any of the borings. Based on the lack of any water within the borings, and the moisture contents of the recovered soil samples, the static groundwater table is considered to have existed at a depth in excess of 25± feet at the time of the subsurface exploration.

As part of our research, we reviewed readily available groundwater data in order to determine regional groundwater depths. Recent water level data was obtained from the California Department of Water Resources website, http://www.water.ca.gov/waterdatalibrary/. The nearest monitoring well on record is located approximately ½± mile southwest of the site. Water level readings within this monitoring well indicate a groundwater level of 277± feet below the ground surface in March 2021.

5.0 LABORATORY TESTING

The soil samples recovered from the subsurface exploration were returned to our laboratory for further testing to determine selected physical and engineering properties of the soils. The tests are briefly discussed below. It should be noted that the test results are specific to the actual samples tested, and variations could be expected at other locations and depths.

Classification

All recovered soil samples were classified using the Unified Soil Classification System (USCS), in accordance with ASTM D-2488. The field identifications were then supplemented with additional visual classifications and/or by laboratory testing. The USCS classifications are shown on the Boring Logs and are periodically referenced throughout this report.

Density and Moisture Content

The density has been determined for selected relatively undisturbed ring samples. These densities were determined in general accordance with the method presented in ASTM D-2937. The results are recorded as dry unit weight in pounds per cubic foot. The moisture contents are determined in accordance with ASTM D-2216, and are expressed as a percentage of the dry weight. These test results are presented on the Boring Logs.

Consolidation

Selected soil samples were tested to determine their consolidation potential, in accordance with ASTM D-2435. The testing apparatus is designed to accept either natural or remolded samples in a one-inch high ring, approximately 2.416 inches in diameter. Each sample is then loaded incrementally in a geometric progression and the resulting deflection is recorded at selected time intervals. Porous stones are in contact with the top and bottom of the sample to permit the addition or release of pore water. The samples are typically inundated with water at an intermediate load to determine their potential for collapse or heave. The results of the consolidation testing are plotted on Plates C-1 through C-12 in Appendix C of this report.

Maximum Dry Density and Optimum Moisture Content

A representative bulk sample has been tested for its maximum dry density and optimum moisture content. The results have been obtained using the Modified Proctor procedure, per ASTM D-1557 and are presented on Plate C-13 in Appendix C of this report. This test is generally used to compare the in-situ densities of undisturbed field samples, and for later compaction testing. Additional testing of other soil types or soil mixes may be necessary at a later date.

Soluble Sulfates

A representative sample of the near-surface soil was submitted to a subcontracted analytical laboratory for determination of soluble sulfate content. Soluble sulfates are naturally present in soils, and if the concentration is high enough, can result in degradation of concrete which comes

into contact with these soils. The results of the soluble sulfate testing are presented below, and are discussed further in a subsequent section of this report.

Sample Identification	Soluble Sulfates (%)	Sulfate Classification
B-1 @ 0 to 5 feet	<0.001	Not Applicable (S0)

Corrosivity Testing

One representative bulk sample of the near-surface soils was submitted to a subcontracted corrosion engineering laboratory to identify potentially corrosive characteristics with respect to common construction materials. The corrosivity testing included a determination of the electrical resistivity, pH, and chloride and nitrate concentrations of the soils, as well as other tests. The results of some of these tests are presented below.

Sample Identification	Saturated Resistivity (ohm-cm)	pH	Chlorides (mg/kg)	Nitrates (mg/kg)
B-1 @ 0 to 5 feet	26,800	8.3	2.8	3.0

6.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the results of our review, field exploration, laboratory testing and geotechnical analysis, the proposed development is considered feasible from a geotechnical standpoint. The recommendations contained in this report should be taken into the design, construction, and grading considerations.

The recommendations are contingent upon all grading and foundation construction activities being monitored by the geotechnical engineer of record. The recommendations are provided with the assumption that an adequate program of client consultation, construction monitoring, and testing will be performed during the final design and construction phases to verify compliance with these recommendations. Maintaining Southern California Geotechnical, Inc., (SCG) as the geotechnical consultant from the beginning to the end of the project will provide continuity of services. The geotechnical engineering firm providing testing and observation services shall assume the responsibility of Geotechnical Engineer of Record.

The Grading Guide Specifications, included as Appendix D, should be considered part of this report, and should be incorporated into the project specifications. The contractor and/or owner of the development should bring to the attention of the geotechnical engineer any conditions that differ from those stated in this report, or which may be detrimental for the development.

6.1 Seismic Design Considerations

The subject site is located in an area which is subject to strong ground motions due to earthquakes. The performance of a site-specific seismic hazards analysis was beyond the scope of this investigation. However, numerous faults capable of producing significant ground motions are located near the subject site. Due to economic considerations, it is not generally considered reasonable to design a structure that is not susceptible to earthquake damage. Therefore, significant damage to structures may be unavoidable during large earthquakes. The proposed structure should, however, be designed to resist structural collapse and thereby provide reasonable protection from serious injury, catastrophic property damage and loss of life.

Faulting and Seismicity

Research of available maps indicates that the subject site is not located within an Alquist-Priolo Earthquake Fault Zone. Furthermore, SCG did not identify any evidence of faulting during the geotechnical investigations. Therefore, the possibility of significant fault rupture on the site is considered to be low.

The potential for other geologic hazards such as seismically induced settlement, lateral spreading, tsunamis, inundation, seiches, flooding, and subsidence affecting the site is considered low.

Seismic Design Parameters

The 2019 California Building Code (CBC) provides procedures for earthquake resistant structural design that include considerations for on-site soil conditions, occupancy, and the configuration of the structure including the structural system and height. The seismic design parameters presented below are based on the soil profile and the proximity of known faults with respect to the subject site.

Based on standards in place at the time of this report, the proposed development is expected to be designed in accordance with the requirements of the 2019 edition of the California Building Code (CBC), which was adopted on January 1, 2020.

The 2019 CBC Seismic Design Parameters have been generated using the SEAOC/OSHPD Seismic Design Maps Tool, a web-based software application available at the website www.seismicmaps.org. This software application calculates seismic design parameters in accordance with several building code reference documents, including ASCE 7-16, upon which the 2019 CBC is based. The application utilizes a database of risk-targeted maximum considered earthquake (MCE_R) site accelerations at 0.01-degree intervals for each of the code documents. The table below was created using data obtained from the application. The output generated from this program is included as Plate E-1 in Appendix E of this report.

The 2019 CBC requires that a site-specific ground motion study be performed in accordance with Section 11.4.8 of ASCE 7-16 for Site Class D sites with a mapped S_1 value greater than 0.2. However, Section 11.4.8 of ASCE 7-16 also indicates an exception to the requirement for a site-specific ground motion hazard analysis for certain structures on Site Class D sites. The commentary for Section 11 of ASCE 7-16 (Page 534 of Section C11 of ASCE 7-16) indicates that "In general, this exception effectively limits the requirements for site-specific hazard analysis to very tall and or flexible structures at Site Class D sites." **Based on our understanding of the proposed development, the seismic design parameters presented below were calculated assuming that the exception in Section 11.4.8 applies to the proposed structure at this site. However, the structural engineer should verify that this exception is applicable to the proposed structure.** Based on the exception, the spectral response accelerations presented below were calculated using the site coefficients (F_a and F_v) from Tables 1613.2.3(1) and 1613.2.3(2) presented in Section 16.4.4 of the 2019 CBC.

2019 CBC SEISMIC DESIGN PARAMETERS

Parameter		Value
Mapped Spectral Acceleration at 0.2 sec Period	S_S	1.643
Mapped Spectral Acceleration at 1.0 sec Period	S_1	0.602
Site Class	---	D
Site Modified Spectral Acceleration at 0.2 sec Period	S_{MS}	1.643
Site Modified Spectral Acceleration at 1.0 sec Period	S_{M1}	1.023
Design Spectral Acceleration at 0.2 sec Period	S_{DS}	1.096
Design Spectral Acceleration at 1.0 sec Period	S_{D1}	0.682

It should be noted that the site coefficient F_v and the parameters S_{M1} and S_{D1} were not included in the SEAOC/OSHPD Seismic Design Maps Tool output for the 2019 CBC. We calculated these parameters-based on Table 1613.2.3(2) in Section 16.4.4 of the 2019 CBC using the value of S_1 obtained from the Seismic Design Maps Tool, assuming that a site-specific ground motion hazards analysis is not required for the proposed building at this site.

Liquefaction

Liquefaction is the loss of strength in generally cohesionless, saturated soils when the pore-water pressure induced in the soil by a seismic event becomes equal to or exceeds the overburden pressure. The primary factors which influence the potential for liquefaction include groundwater table elevation, soil type and grain size characteristics, relative density of the soil, initial confining pressure, and intensity and duration of ground shaking. The depth within which the occurrence of liquefaction may impact surface improvements is generally identified as the upper 50 feet below the existing ground surface. Liquefaction potential is greater in saturated, loose, poorly graded fine sands with a mean (d_{50}) grain size in the range of 0.075 to 0.2 mm (Seed and Idriss, 1971). Clayey (cohesive) soils or soils which possess clay particles (d<0.005mm) in excess of 20 percent (Seed and Idriss, 1982) are generally not considered to be susceptible to liquefaction, nor are those soils which are above the historic static groundwater table.

The California Geological Survey (CGS) has not yet conducted detailed seismic hazards mapping in the area of the subject site. The general liquefaction susceptibility of the site was determined by research of the San Bernardino County Land Use Plan, General Plan, Geologic Hazard Overlays. Map FH28 for the Guasti Quadrangle indicates that the subject site is not located within an area of liquefaction susceptibility. Based on the mapping performed by the county of San Bernardino and the lack of a historic high ground water table within the upper 50± feet of the ground surface, liquefaction is not considered to be a design concern for this project.

6.2 Geotechnical Design Considerations

General

The proposed building areas are underlain by artificial fill materials, extending to depths of 2½ to 4½± feet below the existing site grades. Based on their strength characteristics and a lack of documentation regarding the placement and compaction of the existing fill materials, these soils are considered to consist of undocumented fill, and are not suitable for the support of the foundation loads of the proposed buildings. In. The artificial fill and possible fill soils are underlain by native alluvium which possesses relatively favorable strengths and consolidation/collapse characteristics. It is anticipated that demolition of the existing structures and associated improvements will cause disturbance of the upper 4 to 5± feet of soil. Therefore, remedial grading is considered warranted within the proposed building area in order to remove all of the undocumented fill soils in their entirety and any soils disturbed during the demolition process, and replace these materials as compacted structural fill soils.

Settlement

The recommended remedial grading will remove the existing undocumented fill soils and a portion of the near-surface native alluvial soils and replace these materials as compacted structural fill. The native soils that will remain in place below the recommended depth of overexcavation will not be subject to significant stress increases from the foundations of the new structures. Therefore, following completion of the recommended grading, post-construction settlements are expected to be within tolerable limits.

Expansion

The near-surface soils consist of well graded sands and silty sands with no appreciable clay content. These materials have been visually classified as non-expansive. Therefore, no design considerations related to expansive soils are considered warranted for this site.

Soluble Sulfates

The results of the soluble sulfate testing indicate that the selected sample of the on-site soils possesses a sulfate concentration that corresponds to Class S0 with respect to the American Concrete Institute (ACI) Publication 318-14 Building Code Requirements for Structural Concrete and Commentary, Section 4.3. Therefore, specialized concrete mix designs are not considered to be necessary, with regard to sulfate protection purposes. It is, however, recommended that additional soluble sulfate testing be conducted at the completion of rough grading to verify the soluble sulfate concentrations of the soils which are present at foundation bearing grade.

Corrosion Potential

The results of laboratory testing indicate that the tested sample of the on-site soils possesses a saturated resistivity of 26,800 ohm-cm, and a pH value of 8.3. These test results have been evaluated in accordance with guidelines published by the Ductile Iron Pipe Research Association (DIPRA). The DIPRA guidelines consist of a point system by which characteristics of the soils are used to quantify the corrosivity characteristics of the site. Resistivity and pH are two of the five factors that enter into the evaluation procedure. Redox potential, relative soil moisture content and sulfides are also included. Although sulfide testing was not part of the scope of services for this project, we have evaluated the corrosivity characteristics of the on-site soils using resistivity, pH and moisture content. Based on these factors, and utilizing the DIPRA procedure, the on-site soils are not considered to be corrosive to ductile iron pipe.

A relatively low concentration (2.8 mg/kg) of chlorides was detected in the sample submitted for corrosivity testing. In general, soils possessing chloride concentrations in excess of 500 parts per million (ppm) are considered to be corrosive with respect to steel reinforcement within reinforced concrete. Based on the lack of any significant chlorides in the tested sample, the site is considered to have a C1 chloride exposure in accordance with the American Concrete Institute (ACI) Publication 318 Building Code Requirements for Structural Concrete and Commentary. Therefore, a specialized concrete mix design for reinforced concrete for protection against chloride exposure is not considered warranted.

Nitrates present in soil can be corrosive to copper tubing at concentrations greater than 50 mg/kg. The tested sample possesses a nitrate concentration of 3.0 mg/kg. Based on this test result, the on-site soils are not considered to be corrosive to copper pipe.

It should be noted that SCG does not practice in the field of corrosion engineering. Therefore, the client may wish to contact a corrosion engineer to provide a more thorough evaluation.

Shrinkage/Subsidence

Removal and recompaction of the existing fill soils and near-surface alluvium is estimated to result in an average shrinkage of 8 to 16 percent. However, potential shrinkage for individual samples ranged between 0 and 18 percent. The potential shrinkage estimate is based on dry density testing performed on small-diameter samples taken at the boring locations. If a more accurate and precise shrinkage estimate is desired, SCG can perform a shrinkage study involving several excavated test-pits where in-place densities are determined using in-situ testing methods instead of laboratory density testing on small-diameter samples. Please contact SCG for details and a cost estimate regarding a shrinkage study, if desired.

Minor ground subsidence is expected to occur in the soils below the zone of removal, due to settlement and machinery working. The subsidence is estimated to be 0.1 feet.

These estimates are based on previous experience and the subsurface conditions encountered at the boring locations. The actual amount of subsidence is expected to be variable and will be dependent on the type of machinery used, repetitions of use, and dynamic effects, all of which are difficult to assess precisely.

Grading and Foundation Plan Review

Grading and foundation plans were not available at the time of this report. It is therefore recommended that we be provided with copies of the preliminary grading and foundation plans, when they become available, for review with regard to the conclusions, recommendations, and assumptions contained within this report.

6.3 Site Grading Recommendations

The grading recommendations presented below are based on the subsurface conditions encountered at the boring locations, and our understanding of the proposed development. We recommend that all grading activities be completed in accordance with the Grading Guide Specifications included as Appendix D of this report, unless superseded by site-specific recommendations presented below.

Site Stripping and Demolition

Demolition of the existing structures, pavements and any associated improvements will be necessary to facilitate the construction of the proposed development. Demolition of the existing structures should include all foundations, floor slabs, and any associated utilities. Any septic systems encountered during demolition and/or grading (if present) should be removed in their

entirety. Any associated leach fields or other existing underground improvements should also be removed in their entirety. Debris resultant from demolition should be disposed of off-site in accordance with local regulations. Alternatively, concrete and asphalt debris may be pulverized to a maximum 2-inch particle size, well mixed with the on-site soils, and incorporated into new structural fills or it may be processed into crushed miscellaneous base (CMB), if desired. Furthermore, the contractor should take necessary precautions to protect the adjacent improvements during demolition.

Initial site stripping should also include removal of any surficial vegetation from the unpaved areas of the site. This should include any weeds, grasses, shrubs, and trees. Root systems associated with the trees should be removed in their entirety, and the resultant excavations should be backfilled with compacted structural fill soils. The actual extent of site stripping should be determined in the field by the geotechnical engineer, based on the organic content and stability of the materials encountered. These materials should be disposed of off-site.

Treatment of Existing Soils: Building Pads

Remedial grading should be performed within the proposed building areas in order to remove the existing undocumented fill soils, any soils disturbed during demolition, and the upper portion of the near-surface native alluvium. Undocumented fill soils were encountered at all of the boring locations, extending to depths of 2½ to 4½± feet below the existing site grades. Based on conditions encountered at the boring locations, the existing soils within the proposed building areas are also recommended to be overexcavated to a depth of at least 5 feet below existing grades and to a depth of at least 3 feet below proposed building pad subgrade elevation, whichever is greater. Within the influence zones of the new foundations, the overexcavation should extend to a depth of at least 3 feet below proposed foundation bearing grade.

The overexcavation areas should extend at least 5 feet beyond the building and foundation perimeters, and to an extent equal to the depth of fill placed below the foundation bearing grade, whichever is greater. If the proposed structures incorporate any exterior columns (such as for a canopy or overhang) the area of overexcavation should also encompass these areas.

Following completion of the overexcavation, the subgrade soils within the overexcavation areas should be evaluated by the geotechnical engineer to verify their suitability to serve as the structural fill subgrade, as well as to support the foundation loads of the new structures. This evaluation should include proofrolling and probing to identify any soft, loose or otherwise unstable soils that must be removed. Some localized areas of deeper excavation may be required if additional fill materials or loose, porous, or low-density native soils are encountered at the base of the overexcavation.

After a suitable overexcavation subgrade has been achieved, the exposed soils should be scarified to a depth of at least 12 inches and moisture treated to 0 to 4 percent above optimum moisture content. The subgrade soils should then be recompacted to at least 90 percent of the ASTM D-1557 maximum dry density. The previously excavated soils may then be replaced as compacted structural fill.

Treatment of Existing Soils: Retaining Walls and Site Walls

The existing soils within the areas of any proposed retaining walls and site walls should be overexcavated to a depth of 3 feet below foundation bearing grade and replaced as compacted structural fill as discussed above for the proposed building pads. Any undocumented fill soils or disturbed native alluvium within any of these foundation areas should be removed in their entirety. The overexcavation areas should extend at least 5 feet beyond the foundation perimeters, and to an extent equal to the depth of fill below the new foundations. Any erection pads for tilt-up concrete walls are considered to be part of the foundation system. Therefore, these overexcavation recommendations are applicable to erection pads. The overexcavation subgrade soils should be evaluated by the geotechnical engineer prior to scarifying, moisture conditioning to within 0 to 4 percent above the optimum moisture content, and recompacting the upper 12 inches of exposed subgrade soils. The previously excavated soils may then be replaced as compacted structural fill.

If the full lateral recommended remedial grading cannot be completed for the proposed retaining walls and site walls located along property lines, the foundations for those walls should be designed using a reduced allowable bearing pressure. Furthermore, the contractor should take necessary precautions to protect the adjacent improvements during rough grading. Specialized grading techniques, such as A-B-C slot cuts, will likely be required during remedial grading. The geotechnical engineer of record should be contacted if additional recommendations, such as shoring design recommendations, are required during grading.

Treatment of Existing Soils: Flatwork, Parking and Drive Areas

Based on economic considerations, overexcavation of the existing near-surface existing soils in the new flatwork, parking, and drive areas is not considered warranted, with the exception of areas where lower strength or unstable soils are identified by the geotechnical engineer during grading. Subgrade preparation in the new flatwork, parking, and drive areas should initially consist of removal of all soils disturbed during stripping and demolition operations.

The geotechnical engineer should then evaluate the subgrade to identify any areas of additional unsuitable soils. Any such materials should be removed to a level of firm and unyielding soil. The exposed subgrade soils should then be scarified to a depth of 12± inches, moisture conditioned to 0 to 4 percent above the optimum moisture content, and recompacted to at least 90 percent of the ASTM D-1557 maximum dry density. Based on the presence of variable strength surficial soils throughout the site, it is expected that some isolated areas of additional overexcavation may be required to remove zones of lower strength, unsuitable soils.

The grading recommendations presented above for the proposed flatwork, parking, and drive areas assume that the owner and/or developer can tolerate minor amounts of settlement within these areas. The grading recommendations presented above do not mitigate the extent of undocumented fill or compressible/collapsible native alluvium in the flatwork, parking, and drive areas. As such, some settlement and associated pavement distress could occur. Typically, repair of such distressed areas involves significantly lower costs than completely mitigating these soils at the time of construction. If the owner cannot tolerate the risk of such settlements, the flatwork,

parking, and drive areas should be overexcavated to a depth of 2 feet below proposed pavement subgrade elevation, with the resulting soils replaced as compacted structural fill.

Fill Placement

- Fill soils should be placed in thin (6± inches), near-horizontal lifts, moisture conditioned to 0 to 4 percent above the optimum moisture content, and compacted.
- On-site soils may be used for fill provided they are cleaned of any debris to the satisfaction of the geotechnical engineer.
- All grading and fill placement activities should be completed in accordance with the requirements of the 2019 CBC and the grading code of the city of Ontario.
- All fill soils should be compacted to at least 90 percent of the ASTM D-1557 maximum dry density.
- Compaction tests should be performed periodically by the geotechnical engineer as random verification of compaction and moisture content. These tests are intended to aid the contractor. Since the tests are taken at discrete locations and depths, they may not be indicative of the entire fill and therefore should not relieve the contractor of his responsibility to meet the job specifications.

Imported Structural Fill

All imported structural fill should consist of very low expansive (EI < 20), well graded soils possessing at least 10 percent fines (that portion of the sample passing the No. 200 sieve). Additional specifications for structural fill are presented in the Grading Guide Specifications, included as Appendix D.

Utility Trench Backfill

In general, all utility trench backfill should be compacted to at least 90 percent of the ASTM D-1557 maximum dry density. As an alternative, a clean sand (minimum Sand Equivalent of 30) may be placed within trenches and compacted in place (jetting or flooding is not recommended). Compacted trench backfill should conform to the requirements of the local grading code, and more restrictive requirements may be indicated by the city of Ontario. All utility trench backfills should be witnessed by the geotechnical engineer. The trench backfill soils should be compaction tested where possible; probed and visually evaluated elsewhere.

Utility trenches which parallel a footing, and extending below a 1h:1v (horizontal to vertical) plane projected from the outside edge of the footing should be backfilled with structural fill soils, compacted to at least 90 percent of the ASTM D-1557 standard. Pea gravel backfill should not be used for these trenches.

Any soils used to backfill voids around subsurface utility structures, such as manholes or vaults, should be placed as compacted structural fill. If it is not practical to place compacted fill in these areas, then such void spaces may be backfilled with lean concrete slurry. Uncompacted pea gravel or sand is not recommended for backfilling these voids since these materials have a potential to settle and thereby cause distress of pavements placed around these subterranean structures.

6.4 Construction Considerations

Excavation Considerations

The near-surface soils generally consist of sands and silty sands. These materials may be subject to moderate caving within shallow excavations. Where caving does occur, flattened excavation slopes may be sufficient to provide excavation stability. On a preliminary basis, the inclination of temporary slopes should not exceed 2h:1v. Deeper excavations may require some form of external stabilization such as shoring or bracing. Maintaining adequate moisture content within the near-surface soils will improve excavation stability. All excavation activities on this site should be conducted in accordance with Cal-OSHA regulations.

Groundwater

The static groundwater table is considered to have existed at a depth in excess of 25± feet at the time of the subsurface exploration. Therefore, groundwater is not expected to impact the grading or foundation construction activities.

6.5 Foundation Design and Construction

Based on the preceding grading recommendations, it is assumed that the new building pads will be underlain by structural fill soils used to replace existing undocumented fill soils and a portion of the near-surface alluvial soils. These new structural fill soils are expected to extend to a depth of at least 3 feet below proposed foundation bearing grade, underlain by 1± foot of additional soil that has been densified and moisture conditioned in place. Based on this subsurface profile, the proposed structures may be supported on conventional shallow foundations.

Foundation Design Parameters

New square and rectangular footings may be designed as follows:

- Maximum, net allowable soil bearing pressure: 2,500 lbs/ft^2.
- Maximum, net allowable soil bearing pressure: 1,500 lbs/ft^2 if the full lateral extent of remedial grading cannot be achieved.
- Minimum wall/column footing width: 14 inches/24 inches.
- Minimum longitudinal steel reinforcement within strip footings: Two (2) No. 5 rebars (1 top and 1 bottom).
- Minimum foundation embedment: 12 inches into suitable structural fill soils, and at least 18 inches below adjacent exterior grade. Interior column footings may be placed immediately beneath the floor slab.

- It is recommended that the perimeter building foundations be continuous across all exterior doorways. Any flatwork adjacent to the exterior doors should be doweled into the perimeter foundations in a manner determined by the structural engineer.

The allowable bearing pressures presented above may be increased by 1/3 when considering short duration wind or seismic loads. The minimum steel reinforcement recommended above is based on geotechnical considerations; additional reinforcement may be necessary for structural considerations. The actual design of the foundations should be determined by the structural engineer.

Foundation Construction

The foundation subgrade soils should be evaluated at the time of overexcavation, as discussed in Section 6.3 of this report. It is further recommended that the foundation subgrade soils be evaluated by the geotechnical engineer immediately prior to steel or concrete placement. Soils suitable for direct foundation support should consist of newly placed structural fill, compacted to at least 90 percent of the ASTM D-1557 maximum dry density. Any unsuitable materials should be removed to a depth of suitable bearing compacted structural fill or suitable native alluvium (where reduced bearing pressures are utilized), with the resulting excavations backfilled with compacted fill soils. As an alternative, lean concrete slurry (500 to 1,500 psi) may be used to backfill such isolated overexcavations.

The foundation subgrade soils should also be properly moisture conditioned to 0 to 4 percent above the Modified Proctor optimum, to a depth of at least 12 inches below bearing grade. Since it is typically not feasible to increase the moisture content of the floor slab and foundation subgrade soils once rough grading has been completed, care should be taken to maintain the moisture content of the building pad subgrade soils throughout the construction process.

Estimated Foundation Settlements

Post-construction total and differential settlements of shallow foundations designed and constructed in accordance with the previously presented recommendations are estimated to be less than 1.0 and 0.5 inches, respectively. Differential movements are expected to occur over a 30-foot span, thereby resulting in an angular distortion of less than 0.002 inches per inch.

Lateral Load Resistance

Lateral load resistance will be developed by a combination of friction acting at the base of foundations and slab and the passive earth pressure developed by footings below grade. The following friction and passive pressure may be used to resist lateral forces:

- Passive Earth Pressure: 300 lbs/ft^3
- Friction Coefficient: 0.30

These are allowable values, and include a factor of safety. When combining friction and passive resistance, the passive pressure component should be reduced by one-third. These values assume that footings will be poured directly against compacted structural fill soils. The maximum allowable passive pressure is 2,500 lbs/ft^2.

6.6 Floor Slab Design and Construction

Subgrades which will support the new floor slab should be prepared in accordance with the recommendations contained in the ***Site Grading Recommendations*** section of this report. Based on the anticipated grading which will occur at this site, the floors of the proposed structures may be constructed as conventional slabs-on-grade supported on newly placed structural fill (or densified existing soils), extending to a depth of at least 3 feet below finished pad grades. Based on geotechnical considerations, the floor slabs may be designed as follows:

- Minimum slab thickness: 6 inches.

- Modulus of Subgrade Reaction: k = 150 psi/in.

- Minimum slab reinforcement: Reinforcement is not considered necessary from a geotechnical standpoint. The actual floor slab reinforcement should be determined by the structural engineer, based on the imposed slab loading.

- Slab underlayment: If moisture sensitive floor coverings will be used then minimum slab underlayment should consist of a moisture vapor barrier constructed below the entire area of the proposed slab where such moisture sensitive floor coverings are anticipated. The moisture vapor barrier should meet or exceed the Class A rating as defined by ASTM E 1745-97 and have a permeance rating less than 0.01 perms as described in ASTM E 96-95 and ASTM E 154-88. A polyolefin material such as a 15 mil Stego® Wrap Vapor Barrier or equivalent will meet these specifications. The moisture vapor barrier should be properly constructed in accordance with all applicable manufacturer specifications. Given that a rock free subgrade is anticipated and that a capillary break is not required, sand below the barrier is not required. The need for sand and/or the amount of sand above the moisture vapor barrier should be specified by the structural engineer or concrete contractor. The selection of sand above the barrier is not a geotechnical engineering issue and hence outside our purview. Where moisture sensitive floor coverings are not anticipated, the vapor barrier may be eliminated.

- Moisture condition the floor slab subgrade soils to 0 to 4 percent above the Modified Proctor optimum moisture content, to a depth of 12 inches. The moisture content of the floor slab subgrade soils should be verified by the geotechnical engineer within 24 hours prior to concrete placement.

- Proper concrete curing techniques should be utilized to reduce the potential for slab curling or the formation of excessive shrinkage cracks.

The actual design of the floor slab should be completed by the structural engineer to verify adequate thickness and reinforcement.

6.7 Retaining Wall Design and Construction

Although not indicated on the site plans, some small (less than 6 feet in height) retaining walls may be required to facilitate the new site grades. The parameters recommended for use in the design of these walls are presented below.

Retaining Wall Design Parameters

Based on the soil conditions encountered at the boring locations, the following parameters may be used in the design of new retaining walls for this site. The following parameters assume that only the on-site soils will be utilized for retaining wall backfill. The near-surface soils generally consist of sands and silty sands. Based on their classification, these materials are expected to possess a friction angle of at least 30 degrees when compacted to at least 90 percent of the ASTM D-1557 maximum dry density.

If desired, SCG could provide design parameters for an alternative select backfill material behind the retaining walls. The use of select backfill material could result in lower lateral earth pressures. In order to use the design parameters for the imported select fill, this material must be placed within the entire active failure wedge. This wedge is defined as extending from the heel of the retaining wall upwards at an angle of approximately 60° from horizontal. If select backfill material behind the retaining wall is desired, SCG should be contacted for supplementary recommendations.

RETAINING WALL DESIGN PARAMETERS

Design Parameter		Soil Type
		On-site Sands and Silty Sands
Internal Friction Angle (ϕ)		30°
Unit Weight		130 lbs/ft^3
Equivalent Fluid Pressure:	Active Condition (level backfill)	43 lbs/ft^3
	Active Condition (2h:1v backfill)	70 lbs/ft^3
	At-Rest Condition (level backfill)	65 lbs/ft^3

The walls should be designed using a soil-footing coefficient of friction of 0.30 and an equivalent passive pressure of 300 lbs/ft^3. The structural engineer should incorporate appropriate factors of safety in the design of the retaining walls.

The active earth pressure may be used for the design of retaining walls that do not directly support structures or support soils that in turn support structures and which will be allowed to deflect. The at-rest earth pressure should be used for walls that will not be allowed to deflect such as those which will support foundation bearing soils, or which will support foundation loads directly.

Where the soils on the toe side of the retaining wall are not covered by a "hard" surface such as a structure or pavement, the upper 1 foot of soil should be neglected when calculating passive resistance due to the potential for the material to become disturbed or degraded during the life of the structure.

Seismic Lateral Earth Pressures

In accordance with the 2019 CBC, any retaining walls more than 6 feet in height must be designed for seismic lateral earth pressures. If walls 6 feet or more are required for this site, the geotechnical engineer should be contacted for supplementary seismic lateral earth pressure recommendations.

Retaining Wall Foundation Design

The retaining wall foundations should be underlain by at least 3 feet of newly placed structural fill. Foundations to support new retaining walls should be designed in accordance with the general Foundation Design Parameters presented in a previous section of this report.

Backfill Material

On-site soils may be used to backfill the retaining walls. However, all backfill material placed within 3 feet of the back wall face should have a particle size no greater than 3 inches. Some sorting and/or crushing operations may be required. The retaining wall backfill materials should be well graded.

It is recommended that a properly installed prefabricated drainage composite such as the MiraDRAIN 6000XL (or approved equivalent), which is specifically designed for use behind retaining walls be used. If the drainage composite material is not covered by an impermeable surface, such as a structure or pavement, a 12-inch thick layer of a low permeability soil should be placed over the backfill to reduce surface water migration to the underlying soils. The drainage composite should be separated from the backfill soils by a suitable geotextile, approved by the geotechnical engineer.

All retaining wall backfill should be placed and compacted under engineering controlled conditions in the necessary layer thicknesses to ensure an in-place density between 90 and 93 percent of the maximum dry density as determined by the Modified Proctor test (ASTM D1557). Care should be taken to avoid over-compaction of the soils behind the retaining walls, and the use of heavy compaction equipment should be avoided.

Subsurface Drainage

As previously indicated, the retaining wall design parameters are based upon drained backfill conditions. Consequently, some form of permanent drainage system will be necessary in conjunction with the appropriate backfill material. Subsurface drainage may consist of either:

- A weep hole drainage system typically consisting of a series of 2-inch diameter holes in the wall situated slightly above the ground surface elevation on the exposed side of the wall and at an approximate 10-foot on-center spacing. Alternatively, 4-inch diameter holes

at an approximate 20-foot on-center spacing can be used for this type of drainage system. In addition, the weep holes should include a 2 cubic foot pocket of open graded gravel, surrounded by an approved geotextile fabric, at each weep hole location.

- A 4-inch diameter perforated pipe surrounded by 2 cubic feet of gravel per linear foot of drain placed behind the wall, above the retaining wall footing. The gravel layer should be wrapped in a suitable geotextile fabric to reduce the potential for migration of fines. The footing drain should be extended to daylight or tied into a storm drainage system. The actual design of this type of system should be determined by the civil engineer to verify that the drainage system possesses the adequate capacity and slope for its intended use.

6.8 Pavement Design Parameters

Site preparation in the pavement area should be completed as previously recommended in the ***Site Grading Recommendations*** section of this report. The subsequent pavement recommendations assume proper drainage and construction monitoring, and are based on either PCA or CALTRANS design parameters for a twenty (20) year design period. However, these designs also assume a routine pavement maintenance program to obtain the anticipated 20-year pavement service life.

Pavement Subgrades

It is anticipated that the new pavements will be primarily supported on a layer of compacted structural fill, consisting of scarified, thoroughly moisture conditioned and recompacted existing soils. The near-surface soils generally consist of sands and silty sands. These soils are generally considered to possess good to excellent pavement support characteristics, with R-values in the range of 40 to 60. The subsequent pavement design is therefore based upon an assumed R-value of 40. Any fill material imported to the site should have support characteristics equal to or greater than that of the on-site soils and be placed and compacted under engineering controlled conditions. It is recommended that R-value testing be performed after completion of rough grading to verify that the pavement design recommendations presented herein are valid.

Asphaltic Concrete

Presented below are the recommended thicknesses for new flexible pavement structures consisting of asphaltic concrete over a granular base. The pavement designs are based on the traffic indices (TI's) indicated. The client and/or civil engineer should verify that these TI's are representative of the anticipated traffic volumes. If the client and/or civil engineer determine that the expected traffic volume will exceed the applicable traffic index, we should be contacted for supplementary recommendations. The design traffic indices equate to the following approximate daily traffic volumes over a 20-year design life, assuming six operational traffic days per week.

Traffic Index	No. of Heavy Trucks per Day
4.0	0
5.0	1
6.0	3
7.0	11
8.0	35

For the purpose of the traffic volumes indicated above, a truck is defined as a 5-axle tractor trailer unit with one 8-kip axle and two 32-kip tandem axles. All of the traffic indices allow for 1,000 automobiles per day.

ASPHALT PAVEMENTS (R = 40)					
Materials	**Thickness (inches)**				
	Parking Stalls (TI = 4.0)	Auto Drive Lanes (TI = 5.0)	Truck Traffic		
			(TI = 6.0)	(TI = 7.0)	(TI = 8.0)
Asphalt Concrete	3	3	3½	4	5
Aggregate Base	3	4	6	7	8
Compacted Subgrade (90% minimum compaction)	12	12	12	12	12

The aggregate base course should be compacted to at least 95 percent of the ASTM D-1557 maximum dry density. The asphaltic concrete should be compacted to at least 95 percent of the batch plant-reported maximum density. The aggregate base course may consist of crushed aggregate base (CAB) or crushed miscellaneous base (CMB), which is a recycled gravel, asphalt and concrete material. The gradation, R-Value, Sand Equivalent, and Percentage Wear of the CAB or CMB should comply with appropriate specifications contained in the current edition of the "Greenbook" Standard Specifications for Public Works Construction.

Portland Cement Concrete

The preparation of the subgrade soils within concrete pavement areas should be performed as previously described for proposed asphalt pavement areas. The minimum recommended thicknesses for the Portland Cement Concrete pavement sections are as follows:

PORTLAND CEMENT CONCRETE PAVEMENTS (R = 40)				
Materials	**Thickness (inches)**			
	Automobile Parking and Drive Areas (TI = 5.0)	Truck Traffic		
		(TI =6.0)	(TI =7.0)	(TI =8.0)
PCC	5	5	5½	6½
Compacted Subgrade (95% minimum compaction)	12	12	12	12

The concrete should have a 28-day compressive strength of at least 3,000 psi. The maximum joint spacing within all of the PCC pavements is recommended to be equal to or less than 30 times the pavement thickness. Any reinforcement within the PCC pavements should be determined by the project structural engineer.

7.0 GENERAL COMMENTS

This report has been prepared as an instrument of service for use by the client, in order to aid in the evaluation of this property and to assist the architects and engineers in the design and preparation of the project plans and specifications. This report may be provided to the contractor(s) and other design consultants to disclose information relative to the project. However, this report is not intended to be utilized as a specification in and of itself, without appropriate interpretation by the project architect, civil engineer, and/or structural engineer. The reproduction and distribution of this report must be authorized by the client and Southern California Geotechnical, Inc. Furthermore, any reliance on this report by an unauthorized third party is at such party's sole risk, and we accept no responsibility for damage or loss which may occur. The client(s)' reliance upon this report is subject to the Engineering Services Agreement, incorporated into our proposal for this project.

The analysis of this site was based on a subsurface profile interpolated from limited discrete soil samples. While the materials encountered in the project area are considered to be representative of the total area, some variations should be expected between boring locations and sample depths. If the conditions encountered during construction vary significantly from those detailed herein, we should be contacted immediately to determine if the conditions alter the recommendations contained herein.

This report has been based on assumed or provided characteristics of the proposed development. It is recommended that the owner, client, architect, structural engineer, and civil engineer carefully review these assumptions to ensure that they are consistent with the characteristics of the proposed development. If discrepancies exist, they should be brought to our attention to verify that they do not affect the conclusions and recommendations contained herein. We also recommend that the project plans and specifications be submitted to our office for review to verify that our recommendations have been correctly interpreted.

The analysis, conclusions, and recommendations contained within this report have been promulgated in accordance with generally accepted professional geotechnical engineering practice. No other warranty is implied or expressed.

SAMPLE TYPE	GRAPHICAL SYMBOL	SAMPLE DESCRIPTION
AUGER		SAMPLE COLLECTED FROM AUGER CUTTINGS, NO FIELD MEASUREMENT OF SOIL STRENGTH. (DISTURBED)
CORE		ROCK CORE SAMPLE: TYPICALLY TAKEN WITH A DIAMOND-TIPPED CORE BARREL. TYPICALLY USED ONLY IN HIGHLY CONSOLIDATED BEDROCK.
GRAB		SOIL SAMPLE TAKEN WITH NO SPECIALIZED EQUIPMENT, SUCH AS FROM A STOCKPILE OR THE GROUND SURFACE. (DISTURBED)
CS		CALIFORNIA SAMPLER: 2-1/2 INCH I.D. SPLIT BARREL SAMPLER, LINED WITH 1-INCH HIGH BRASS RINGS. DRIVEN WITH SPT HAMMER. (RELATIVELY UNDISTURBED)
NSR		NO RECOVERY: THE SAMPLING ATTEMPT DID NOT RESULT IN RECOVERY OF ANY SIGNIFICANT SOIL OR ROCK MATERIAL.
SPT		STANDARD PENETRATION TEST: SAMPLER IS A 1.4 INCH INSIDE DIAMETER SPLIT BARREL, DRIVEN 18 INCHES WITH THE SPT HAMMER. (DISTURBED)
SH		SHELBY TUBE: TAKEN WITH A THIN WALL SAMPLE TUBE, PUSHED INTO THE SOIL AND THEN EXTRACTED. (UNDISTURBED)
VANE		VANE SHEAR TEST: SOIL STRENGTH OBTAINED USING A 4 BLADED SHEAR DEVICE. TYPICALLY USED IN SOFT CLAYS-NO SAMPLE RECOVERED.

COLUMN DESCRIPTIONS

DEPTH: Distance in feet below the ground surface.

SAMPLE: Sample Type as depicted above.

BLOW COUNT: Number of blows required to advance the sampler 12 inches using a 140 lb hammer with a 30-inch drop. 50/3" indicates penetration refusal (>50 blows) at 3 inches. WH indicates that the weight of the hammer was sufficient to push the sampler 6 inches or more.

POCKET PEN.: Approximate shear strength of a cohesive soil sample as measured by pocket penetrometer.

GRAPHIC LOG: Graphic Soil Symbol as depicted on the following page.

DRY DENSITY: Dry density of an undisturbed or relatively undisturbed sample in lbs/ft^3.

MOISTURE CONTENT: Moisture content of a soil sample, expressed as a percentage of the dry weight.

LIQUID LIMIT: The moisture content above which a soil behaves as a liquid.

PLASTIC LIMIT: The moisture content above which a soil behaves as a plastic.

PASSING #200 SIEVE: The percentage of the sample finer than the #200 standard sieve.

UNCONFINED SHEAR: The shear strength of a cohesive soil sample, as measured in the unconfined state.

SOIL CLASSIFICATION CHART

MAJOR DIVISIONS			SYMBOLS		TYPICAL DESCRIPTIONS
			GRAPH	LETTER	
COARSE GRAINED SOILS MORE THAN 50% OF MATERIAL IS LARGER THAN NO. 200 SIEVE SIZE	GRAVEL AND GRAVELLY SOILS MORE THAN 50% OF COARSE FRACTION RETAINED ON NO. 4 SIEVE	CLEAN GRAVELS (LITTLE OR NO FINES)		GW	WELL-GRADED GRAVELS, GRAVEL - SAND MIXTURES, LITTLE OR NO FINES
				GP	POORLY-GRADED GRAVELS, GRAVEL - SAND MIXTURES, LITTLE OR NO FINES
		GRAVELS WITH FINES (APPRECIABLE AMOUNT OF FINES)		GM	SILTY GRAVELS, GRAVEL - SAND - SILT MIXTURES
				GC	CLAYEY GRAVELS, GRAVEL - SAND - CLAY MIXTURES
	SAND AND SANDY SOILS MORE THAN 50% OF COARSE FRACTION PASSING ON NO. 4 SIEVE	CLEAN SANDS (LITTLE OR NO FINES)		SW	WELL-GRADED SANDS, GRAVELLY SANDS, LITTLE OR NO FINES
				SP	POORLY-GRADED SANDS, GRAVELLY SAND, LITTLE OR NO FINES
		SANDS WITH FINES (APPRECIABLE AMOUNT OF FINES)		SM	SILTY SANDS, SAND - SILT MIXTURES
				SC	CLAYEY SANDS, SAND - CLAY MIXTURES
FINE GRAINED SOILS MORE THAN 50% OF MATERIAL IS SMALLER THAN NO. 200 SIEVE SIZE	SILTS AND CLAYS	LIQUID LIMIT LESS THAN 50		ML	INORGANIC SILTS AND VERY FINE SANDS, ROCK FLOUR, SILTY OR CLAYEY FINE SANDS OR CLAYEY SILTS WITH SLIGHT PLASTICITY
				CL	INORGANIC CLAYS OF LOW TO MEDIUM PLASTICITY, GRAVELLY CLAYS, SANDY CLAYS, SILTY CLAYS, LEAN CLAYS
				OL	ORGANIC SILTS AND ORGANIC SILTY CLAYS OF LOW PLASTICITY
	SILTS AND CLAYS	LIQUID LIMIT GREATER THAN 50		MH	INORGANIC SILTS, MICACEOUS OR DIATOMACEOUS FINE SAND OR SILTY SOILS
				CH	INORGANIC CLAYS OF HIGH PLASTICITY
				OH	ORGANIC CLAYS OF MEDIUM TO HIGH PLASTICITY, ORGANIC SILTS
HIGHLY ORGANIC SOILS				PT	PEAT, HUMUS, SWAMP SOILS WITH HIGH ORGANIC CONTENTS

APPENDIX D

GRADING GUIDE SPECIFICATIONS

These grading guide specifications are intended to provide typical procedures for grading operations. They are intended to supplement the recommendations contained in the geotechnical investigation report for this project. Should the recommendations in the geotechnical investigation report conflict with the grading guide specifications, the more site specific recommendations in the geotechnical investigation report will govern.

General

- The Earthwork Contractor is responsible for the satisfactory completion of all earthwork in accordance with the plans and geotechnical reports, and in accordance with city, county, and applicable building codes.

- The Geotechnical Engineer is the representative of the Owner/Builder for the purpose of implementing the report recommendations and guidelines. These duties are not intended to relieve the Earthwork Contractor of any responsibility to perform in a workman-like manner, nor is the Geotechnical Engineer to direct the grading equipment or personnel employed by the Contractor.

- The Earthwork Contractor is required to notify the Geotechnical Engineer of the anticipated work and schedule so that testing and inspections can be provided. If necessary, work may be stopped and redone if personnel have not been scheduled in advance.

- The Earthwork Contractor is required to have suitable and sufficient equipment on the job-site to process, moisture condition, mix and compact the amount of fill being placed to the approved compaction. In addition, suitable support equipment should be available to conform with recommendations and guidelines in this report.

- Canyon cleanouts, overexcavation areas, processed ground to receive fill, key excavations, subdrains and benches should be observed by the Geotechnical Engineer prior to placement of any fill. It is the Earthwork Contractor's responsibility to notify the Geotechnical Engineer of areas that are ready for inspection.

- Excavation, filling, and subgrade preparation should be performed in a manner and sequence that will provide drainage at all times and proper control of erosion. Precipitation, springs, and seepage water encountered shall be pumped or drained to provide a suitable working surface. The Geotechnical Engineer must be informed of springs or water seepage encountered during grading or foundation construction for possible revision to the recommended construction procedures and/or installation of subdrains.

Site Preparation

- The Earthwork Contractor is responsible for all clearing, grubbing, stripping and site preparation for the project in accordance with the recommendations of the Geotechnical Engineer.

- If any materials or areas are encountered by the Earthwork Contractor which are suspected of having toxic or environmentally sensitive contamination, the Geotechnical Engineer and Owner/Builder should be notified immediately.

- Major vegetation should be stripped and disposed of off-site. This includes trees, brush, heavy grasses and any materials considered unsuitable by the Geotechnical Engineer.

- Underground structures such as basements, cesspools or septic disposal systems, mining shafts, tunnels, wells and pipelines should be removed under the inspection of the Geotechnical Engineer and recommendations provided by the Geotechnical Engineer and/or city, county or state agencies. If such structures are known or found, the Geotechnical Engineer should be notified as soon as possible so that recommendations can be formulated.

- Any topsoil, slopewash, colluvium, alluvium and rock materials which are considered unsuitable by the Geotechnical Engineer should be removed prior to fill placement.

- Remaining voids created during site clearing caused by removal of trees, foundations basements, irrigation facilities, etc., should be excavated and filled with compacted fill.

- Subsequent to clearing and removals, areas to receive fill should be scarified to a depth of 10 to 12 inches, moisture conditioned and compacted

- The moisture condition of the processed ground should be at or slightly above the optimum moisture content as determined by the Geotechnical Engineer. Depending upon field conditions, this may require air drying or watering together with mixing and/or discing.

Compacted Fills

- Soil materials imported to or excavated on the property may be utilized in the fill, provided each material has been determined to be suitable in the opinion of the Geotechnical Engineer. Unless otherwise approved by the Geotechnical Engineer, all fill materials shall be free of deleterious, organic, or frozen matter, shall contain no chemicals that may result in the material being classified as “contaminated,” and shall be very low to non-expansive with a maximum expansion index (EI) of 50. The top 12 inches of the compacted fill should have a maximum particle size of 3 inches, and all underlying compacted fill material a maximum 6-inch particle size, except as noted below.

- All soils should be evaluated and tested by the Geotechnical Engineer. Materials with high expansion potential, low strength, poor gradation or containing organic materials may require removal from the site or selective placement and/or mixing to the satisfaction of the Geotechnical Engineer.

- Rock fragments or rocks less than 6 inches in their largest dimensions, or as otherwise determined by the Geotechnical Engineer, may be used in compacted fill, provided the distribution and placement is satisfactory in the opinion of the Geotechnical Engineer.

- Rock fragments or rocks greater than 12 inches should be taken off-site or placed in accordance with recommendations and in areas designated as suitable by the Geotechnical Engineer. These materials should be placed in accordance with Plate D-8 of these Grading Guide Specifications and in accordance with the following recommendations:

    - Rocks 12 inches or more in diameter should be placed in rows at least 15 feet apart, 15 feet from the edge of the fill, and 10 feet or more below subgrade. Spaces should be left between each rock fragment to provide for placement and compaction of soil around the fragments.

    - Fill materials consisting of soil meeting the minimum moisture content requirements and free of oversize material should be placed between and over the rows of rock or

concrete. Ample water and compactive effort should be applied to the fill materials as they are placed in order that all of the voids between each of the fragments are filled and compacted to the specified density.

- Subsequent rows of rocks should be placed such that they are not directly above a row placed in the previous lift of fill. A minimum 5-foot offset between rows is recommended.

- To facilitate future trenching, oversized material should not be placed within the range of foundation excavations, future utilities or other underground construction unless specifically approved by the soil engineer and the developer/owner representative.

- Fill materials approved by the Geotechnical Engineer should be placed in areas previously prepared to receive fill and in evenly placed, near horizontal layers at about 6 to 8 inches in loose thickness, or as otherwise determined by the Geotechnical Engineer for the project.

- Each layer should be moisture conditioned to optimum moisture content, or slightly above, as directed by the Geotechnical Engineer. After proper mixing and/or drying, to evenly distribute the moisture, the layers should be compacted to at least 90 percent of the maximum dry density in compliance with ASTM D-1557-78 unless otherwise indicated.

- Density and moisture content testing should be performed by the Geotechnical Engineer at random intervals and locations as determined by the Geotechnical Engineer. These tests are intended as an aid to the Earthwork Contractor, so he can evaluate his workmanship, equipment effectiveness and site conditions. The Earthwork Contractor is responsible for compaction as required by the Geotechnical Report(s) and governmental agencies.

- Fill areas unused for a period of time may require moisture conditioning, processing and recompaction prior to the start of additional filling. The Earthwork Contractor should notify the Geotechnical Engineer of his intent so that an evaluation can be made.

- Fill placed on ground sloping at a 5-to-1 inclination (horizontal-to-vertical) or steeper should be benched into bedrock or other suitable materials, as directed by the Geotechnical Engineer. Typical details of benching are illustrated on Plates D-2, D-4, and D-5.

- Cut/fill transition lots should have the cut portion overexcavated to a depth of at least 3 feet and rebuilt with fill (see Plate D-1), as determined by the Geotechnical Engineer.

- All cut lots should be inspected by the Geotechnical Engineer for fracturing and other bedrock conditions. If necessary, the pads should be overexcavated to a depth of 3 feet and rebuilt with a uniform, more cohesive soil type to impede moisture penetration.

- Cut portions of pad areas above buttresses or stabilizations should be overexcavated to a depth of 3 feet and rebuilt with uniform, more cohesive compacted fill to impede moisture penetration.

- Non-structural fill adjacent to structural fill should typically be placed in unison to provide lateral support. Backfill along walls must be placed and compacted with care to ensure that excessive unbalanced lateral pressures do not develop. The type of fill material placed adjacent to below grade walls must be properly tested and approved by the Geotechnical Engineer with consideration of the lateral earth pressure used in the design.

Foundations

- The foundation influence zone is defined as extending one foot horizontally from the outside edge of a footing, and proceeding downward at a ½ horizontal to 1 vertical (0.5:1) inclination.

- Where overexcavation beneath a footing subgrade is necessary, it should be conducted so as to encompass the entire foundation influence zone, as described above.

- Compacted fill adjacent to exterior footings should extend at least 12 inches above foundation bearing grade. Compacted fill within the interior of structures should extend to the floor subgrade elevation.

Fill Slopes

- The placement and compaction of fill described above applies to all fill slopes. Slope compaction should be accomplished by overfilling the slope, adequately compacting the fill in even layers, including the overfilled zone and cutting the slope back to expose the compacted core

- Slope compaction may also be achieved by backrolling the slope adequately every 2 to 4 vertical feet during the filling process as well as requiring the earth moving and compaction equipment to work close to the top of the slope. Upon completion of slope construction, the slope face should be compacted with a sheepsfoot connected to a sideboom and then grid rolled. This method of slope compaction should only be used if approved by the Geotechnical Engineer.

- Sandy soils lacking in adequate cohesion may be unstable for a finished slope condition and therefore should not be placed within 15 horizontal feet of the slope face.

- All fill slopes should be keyed into bedrock or other suitable material. Fill keys should be at least 15 feet wide and inclined at 2 percent into the slope. For slopes higher than 30 feet, the fill key width should be equal to one-half the height of the slope (see Plate D-5).

- All fill keys should be cleared of loose slough material prior to geotechnical inspection and should be approved by the Geotechnical Engineer and governmental agencies prior to filling.

- The cut portion of fill over cut slopes should be made first and inspected by the Geotechnical Engineer for possible stabilization requirements. The fill portion should be adequately keyed through all surficial soils and into bedrock or suitable material. Soils should be removed from the transition zone between the cut and fill portions (see Plate D-2).

Cut Slopes

- All cut slopes should be inspected by the Geotechnical Engineer to determine the need for stabilization. The Earthwork Contractor should notify the Geotechnical Engineer when slope cutting is in progress at intervals of 10 vertical feet. Failure to notify may result in a delay in recommendations.

- Cut slopes exposing loose, cohesionless sands should be reported to the Geotechnical Engineer for possible stabilization recommendations.

- All stabilization excavations should be cleared of loose slough material prior to geotechnical inspection. Stakes should be provided by the Civil Engineer to verify the location and dimensions of the key. A typical stabilization fill detail is shown on Plate D-5.

- Stabilization key excavations should be provided with subdrains. Typical subdrain details are shown on Plates D-6.

Subdrains

- Subdrains may be required in canyons and swales where fill placement is proposed. Typical subdrain details for canyons are shown on Plate D-3. Subdrains should be installed after approval of removals and before filling, as determined by the Soils Engineer.

- Plastic pipe may be used for subdrains provided it is Schedule 40 or SDR 35 or equivalent. Pipe should be protected against breakage, typically by placement in a square-cut (backhoe) trench or as recommended by the manufacturer.

- Filter material for subdrains should conform to CALTRANS Specification 68-1.025 or as approved by the Geotechnical Engineer for the specific site conditions. Clean ¾-inch crushed rock may be used provided it is wrapped in an acceptable filter cloth and approved by the Geotechnical Engineer. Pipe diameters should be 6 inches for runs up to 500 feet and 8 inches for the downstream continuations of longer runs. Four-inch diameter pipe may be used in buttress and stabilization fills.

I. INTRODUCTION AND LOCATION

A paleontological resource assessment has been completed for the Woodruff Logistics Center Project, located at 1350 and 1375 South Woodruff Way, northwest of the intersection of Jurupa Street and Interstate 15, in the city of Ontario, San Bernardino County, California (Figures 1 and 2). The project consists of two parcels (Assessor's Parcel Numbers [APNs] 238-221-22 and 238-201-41) totaling 16.75 acres. On the U.S. Geological Survey 7.5-minute, 1:24,000-scale *Guasti, California* topographic quadrangle map, the project is situated within Section 30, Township 1 South, Range 7 West of the San Bernardino Baseline and Meridian (see Figure 2). The properties, which are entirely developed for retail car dealership operations, are being considered for redevelopment as a 344,260-square-foot, concrete tilt-up commercial warehouse. No significant amounts of below-grade construction, such as basements or crawl spaces, are expected to be included in the proposed development. Cuts and fills of approximately two to four feet are expected to achieve the proposed site grades (Montes and Mitchel 2021).

As the lead agency, the City of Ontario has required the preparation of a paleontological assessment to evaluate the project's potential to yield paleontological resources. The paleontological assessment of the project included a review of paleontological literature and fossil locality records for a previous project in the area, a review of the underlying geology, and recommendations to mitigate impacts to potential paleontological resources.

II. REGULATORY SETTING

The California Environmental Quality Act (CEQA), which is patterned after the National Environmental Policy Act, is the overriding environmental regulation that sets the requirement for protecting California's paleontological resources. CEQA mandates that governing permitting agencies (lead agencies) set their own guidelines for the protection of nonrenewable paleontological resources under their jurisdiction.

State of California

Under "Guidelines for Implementation of the California Environmental Quality Act," as amended in December 2018 (California Code of Regulations [CCR] Title 14, Division 6, Chapter 3, Sections 15000 et seq.), procedures define the types of activities, persons, and public agencies required to comply with CEQA. Section 15063 of the CCR provides a process by which a lead agency may review a project's potential impact to the environment, determine whether the impacts are significant, and provide recommendations, if necessary.

In CEQA's Environmental Checklist Form, one of the questions to answer is, "Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?" (Appendix G, Section VII, Part f). This is to ensure compliance with California Public Resources Code Section 5097.5, the law that protects nonrenewable resources, including fossils, which is paraphrased below:

a) A person shall not knowingly and willfully excavate upon, or remove, destroy, injure or deface any historic or prehistoric ruins, burial grounds, archaeological or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, rock art, or any other archaeological, paleontological or historical feature, situated on public lands, except with the express permission of the public agency having jurisdiction over such lands.
b) As used in this section, "public lands" means lands owned by, or under the jurisdiction of, the state, or any city, county, district, authority, or public corporation, or any agency thereof.
c) A violation of this section is a misdemeanor.

City of Ontario

The Ontario Plan (TOP) 2050 Final Supplemental Environmental Impact Report (FSEIR) sets forth goals and policies for the City to manage future growth and land uses. According to Impact 5.7-6 of the FSEIR:

> Ontario is underlain by deposits of Quaternary and upper-Pleistocene sediments deposited during Pliocene and early Pleistocene time. Quaternary Older Alluvial sediments may contain significant, nonrenewable, paleontological resources and are therefore considered to have high sensitivity. Older Pleistocene alluvial sediments can yield fossil remains, often found at depths of 10 feet or more below existing ground surface. As previously discussed, for the Approved TOP, the San Bernardino County Museum, Division of Geological Sciences, conducted the paleontological records search and found one previously known paleontological resource locality recorded by the Regional Paleontologic Locality Inventory, a computer database with positional and contextual data for more than 3,000 fossil localities throughout California and the southwestern United States. This review found one paleontological locality for the City area (SBCM 5.1.8). This locality yielded the remains of a mammoth from approximately 20 feet below the ground surface. As a result, the possibility of finding additional paleontological resources within City boundaries is moderate to high at depths of 10 feet or more below ground surface. (PlaceWorks 2022a)

To mitigate the potential impacts identified in Impact 5.7-6, the DSEIR proposes the following mitigation measures. These measures are also stated in the Mitigation Monitoring and Reporting Program of TOP 2050 (PlaceWorks 2022b):

> Mitigation Measure MM 5-2: In areas of documented or inferred archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements:
>
> a) Archaeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities.
>
> b) Should any cultural resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources.
>
> c) Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including a catalog with museum numbers. (PlaceWorks 2022a, 2022b)

III. GEOLOGY

The project is located in eastern Pomona Valley, the surface of which is covered by Holocene to late Pleistocene-aged, young eolian deposits, characterized as silt and medium- to fine-grained sand (green areas with red dots labeled "Qye" on Figure 3, after Morton and Miller 2006). Near the project are large areas of artificial fill (brown areas labeled "Qaf"). Various Holocene and late Pleistocene alluvial deposits lie to the east (deposits colored yellow). Deeper and older alluvial fan deposits underlie the young eolian deposits.

A project-specific geotechnical investigation was recently performed by Southern California Geotechnical (Montes and Mitchel 2021). The scope included drilling boreholes to depths of 20 to 25 feet, logging the geology, and collecting soil samples for analysis. Results indicate the parcels were covered with about 2.5 to 4.5 feet of undocumented disturbed or artificial fill soils. Below the artificial fill was alluvium to at least 25 feet deep, consisting of loose to medium dense silty, fine-grained sands; fine-grained sands; fine to medium-grained sands; and fine sandy silts, with varying fine to coarse gravel content. Montes and Mitchel (2021) recommended the over-excavation of the project to a depth of five feet to remediate the presence of the artificial fill, and to a depth of at least three feet below proposed building pad subgrade elevation, whichever is greater.

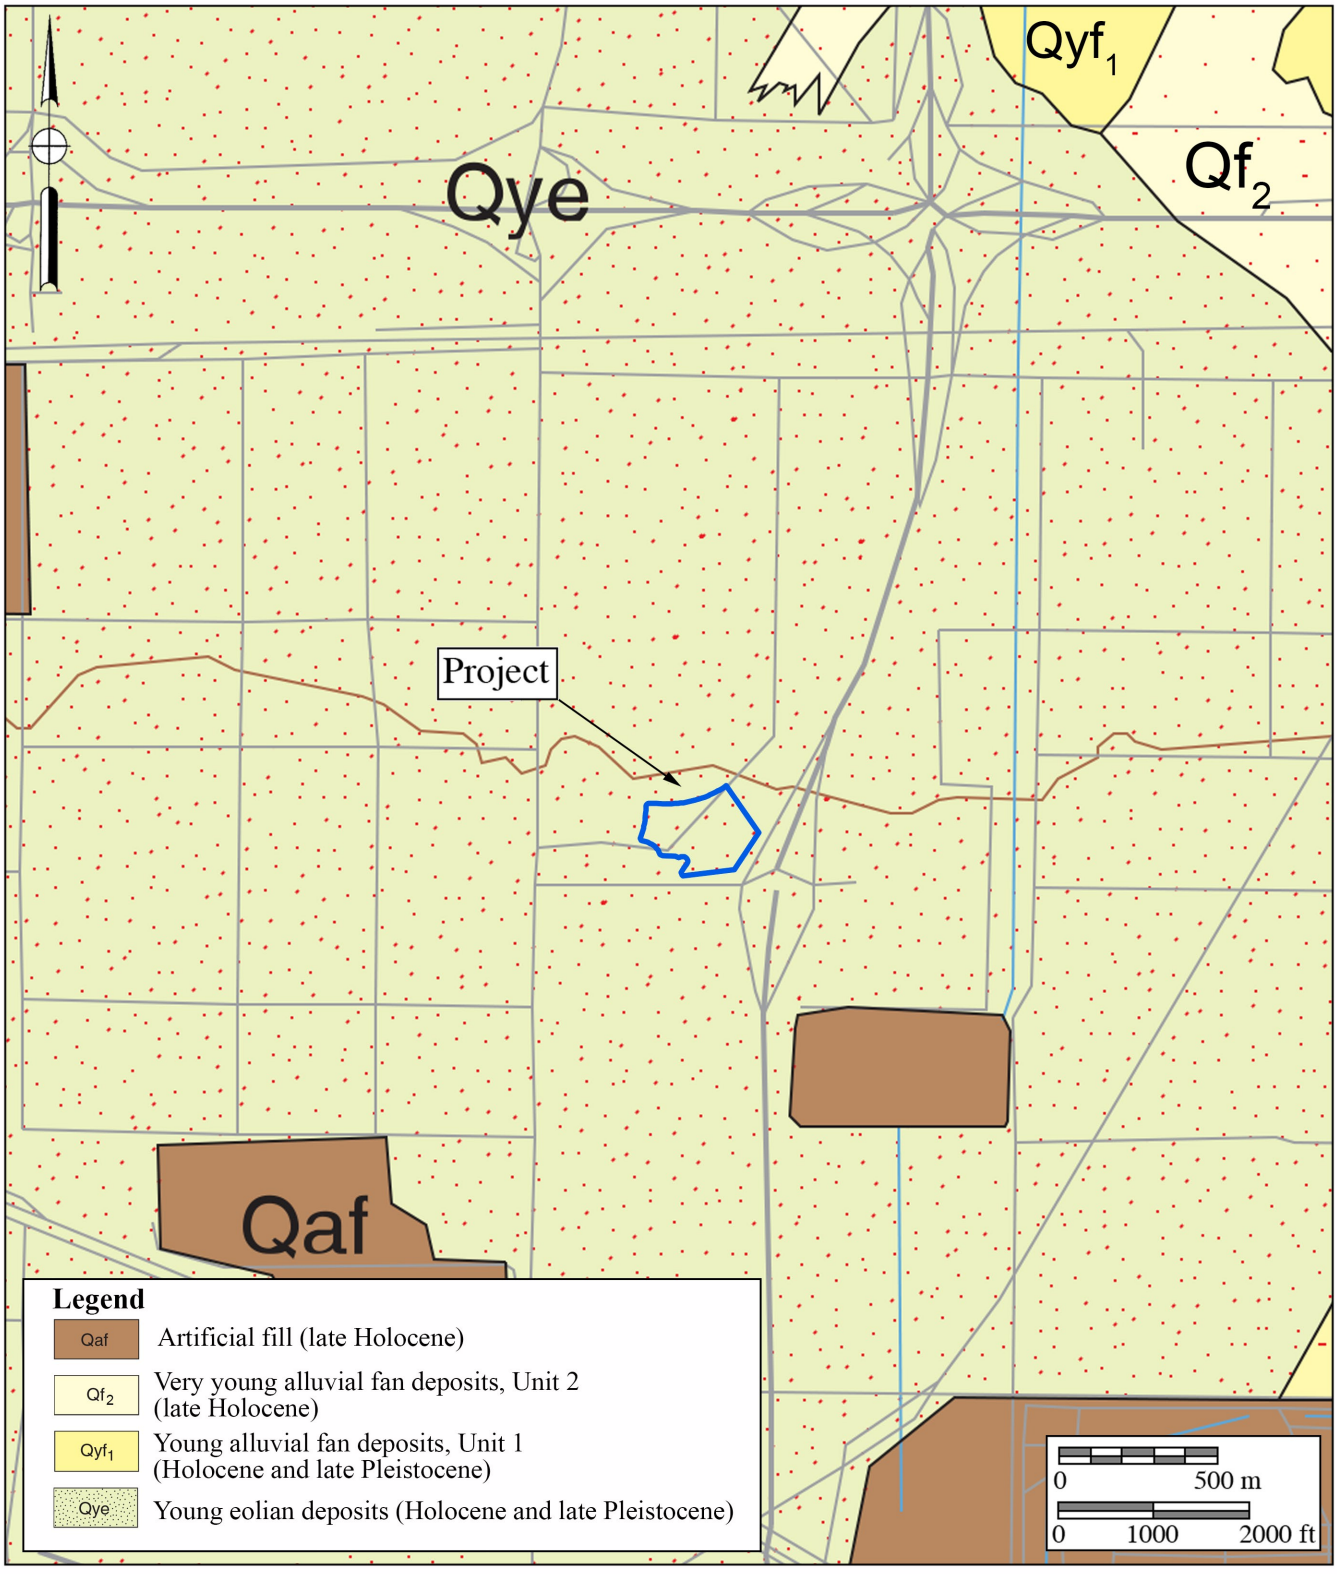
IV. PALEONTOLOGICAL RESOURCES

Definition

Paleontological resources are the remains of prehistoric life that have been preserved in geologic strata. These remains are called fossils and include bones, shells, teeth, and plant remains (including their impressions, casts, and molds) in the sedimentary matrix, as well as trace fossils such as footprints and burrows. Fossils are considered older than 5,000 years of age (Society of Vertebrate Paleontology 2010) but may include younger remains (subfossils) when viewed in the context of local extinction of the organism or habitat, for example. Fossils are considered a nonrenewable resource under state and local guidelines (see Section II).

Fossil Locality Records Search

A paleontological literature review and collections and locality records search was conducted for the project using records obtained for prior projects from the Division of Geological Sciences at the San Bernardino County Museum (SBCM), the Los Angeles County Museum of Natural History (LACM), the University of California Museum of Paleontology, and the Western Science Center (WSC) in Hemet, and data from published and unpublished paleontological literature. The resulting locality records search did not identify any previously recorded fossil localities from within the boundaries of the project.



BFSA Environmental Services
A Perennial Company

Figure 3

Geologic Map

The Woodruff Logistics Center Project

Geology after Morton and Miller (2006)

The closest locality is situated just over one mile east of the project along Champagne Avenue in Ontario, consisting of the remains of a Pleistocene-aged mammoth from a depth of about 20 feet below the surface (SBCM locality no. [loc.] 5.1.8; Jefferson 2009; PlaceWorks 2022a). Eight more localities (SBCM locs. 5.1.11, 5.1.14 to 5.1.17, and 5.1.19 to 5.1.21) are situated between two and five miles east of the project. The bones of large and small Pleistocene-age mammals, as well as the remains of terrestrial snails and freshwater clams, were recovered from these localities, mostly from clayey, silty sands from depths ranging from five to 21 feet below the surface when recorded. Mammals from these localities include three species of rodent, cottontail rabbit, bison, western camel, horse, Pacific mastodon, saber-toothed cat, and other unidentified large mammal remains.

The nearest known LACM-held locality lies between four and five miles to the south in Eastvale and consists of Pleistocene snake remains (LACM loc. 7811). The nearest known WSC-held locality is located over five miles to the southwest, near Merrill Avenue, yielding sparse mammalian remains that include a large bovid-like artiodactyl (even-toed grazer) from about five to seven feet deep (WSC locality no. WSC-2021-197; Wirths 2021).

V. PALEONTOLOGICAL SENSITIVITY

Overview

The degree of paleontological sensitivity of any particular area is based on a number of factors, including the documented presence of fossiliferous resources on a site or in nearby areas, the presence of documented fossils within a particular geologic formation or lithostratigraphic unit, and whether or not the original depositional environment of the sediments is one that might have been conducive to the accumulation of organic remains that may have become fossilized over time. Holocene alluvium is generally considered to be geologically too young to contain significant nonrenewable paleontological resources (*i.e.,* fossils) and thus is typically assigned a low paleontological sensitivity. Pleistocene (over 11,700 years old) alluvial and alluvial fan deposits in the Inland Empire, however, often yield important terrestrial vertebrate fossils such as extinct mammoths, mastodons, and giant ground sloths, as well as extinct species of horse, bison, camel, saber-toothed cats, and others (Jefferson 2009). These Pleistocene sediments are thus accorded a high paleontological resource sensitivity.

Professional Standards

The Society of Vertebrate Paleontology (2010) has drafted guidelines that include four categories of paleontological sensitivity for geologic units (formations) that might be impacted by a proposed project, and are summarized below:

- *High Potential:* Rock units from which vertebrate or significant invertebrate, plant, or trace fossils have been recovered.

- *Undetermined Potential:* Rock units for which little information is available concerning their paleontological content, geologic age, and depositional environment, and further study is needed to determine the potential of the rock unit.
- *Low Potential:* Rock units that are poorly represented by fossil specimens in institutional collections or, based on a general scientific consensus, that only preserve fossils in rare circumstances.
- *No Potential:* Rock units that have no potential to contain significant paleontological resources, such as high-grade metamorphic rocks and plutonic igneous rocks.

Using these criteria, based on nearby fossil localities in southern and eastern Ontario and southwestern Fontana, the mapped geology, and the geotechnical investigation (Montes and Mitchel 2021), the young eolian/alluvial deposits below the artificial fill at the project may be considered to have a low potential for paleontological resources, but increase to an undetermined to high potential for yielding significant paleontological resources with increasing depth and age.

City of Ontario Assessment of Paleontological Sensitivity

The City of Ontario considers strata at depths of 10 feet or greater as having a moderate to high paleontological sensitivity. As such, the potential to uncover undiscovered paleontological resources is considered high (PlaceWorks 2022a: 5.7-17).

VI. CONCLUSIONS AND RECOMMENDATIONS

Potentially fossiliferous late Pleistocene alluvial fan deposits likely occur at depth below the project. These deposits underlie the Holocene young eolian deposits mapped at the surface ("Qye" on Figure 3). The occurrence of terrestrial vertebrate fossils at shallow depths from Pleistocene alluvial fan sediments across the Inland Empire is well documented. The high paleontological sensitivity rating typically assigned to Pleistocene alluvial fan sediments for yielding paleontological resources supports the recommendation that paleontological monitoring be implemented during mass grading and excavation activities in undisturbed Pleistocene alluvial fan sediments to mitigate any adverse impacts (loss or destruction) to potential nonrenewable paleontological resources. On the basis of these statements, a Paleontological Resources Impact Mitigation Program (PRIMP) is recommended, in accordance with Mitigation Measure MM 5-2 of the City of Ontario (PlaceWorks 2022b). The PRIMP shall be approved by the Planning Department of the City of Ontario prior to the issuance of the project's grading permit. It is strongly recommended that the PRIMP should recommend part-time monitoring by a paleontological monitor of undisturbed deposits at the project starting at a depth of 10 feet below the surface, in accordance with the guidelines of the City of Ontario (PlaceWorks 2022a: 5.7-17). The duration and frequency of part-time monitoring shall be at the discretion of the County or City-qualified project paleontologist, based on stratigraphic and lithologic parameters

observed by the paleontological monitor.

If a fossil(s) is found at shallower depths, earth disturbance activities should be halted within a radius of 50 feet from the location of the fossil, and a qualified, project-level paleontologist shall be consulted to determine the significance of the fossilized remains. If the fossil is deemed significant by the paleontologist in consultation with the project's Planning Director, full-time monitoring should be initiated at the project, in accordance with Mitigation Measure MM 5-2.

A suggested PRIMP is outlined below. When implemented with the provisions of CEQA, the City of Ontario (PlaceWorks 2022a, 2022b), and the guidelines of the Society of Vertebrate Paleontology (2010), this PRIMP would mitigate any adverse impacts (loss or destruction) to potential nonrenewable paleontological resources (fossils), if present, to a level below significant.

1. Monitoring of mass grading and excavation activities shall be performed by a qualified paleontologist or paleontological monitor. Starting at a depth of 10 feet, monitoring will be conducted part time in undisturbed sediments of alluvial fan deposits. The duration and frequency of part-time monitoring shall be at the discretion of the County- or City-qualified project paleontologist, based on stratigraphic and lithologic parameters observed by the paleontological monitor. If a significant fossil, as deemed by the project-level paleontologist, is discovered, full-time monitoring shall be initiated at the project.
2. If a fossil(s) is found at a shallower depth, earth disturbance activities should be halted within a radius of 50 feet from the location of the fossil, and a project-level paleontologist shall be consulted to determine the significance of the fossilized remains. If the fossil is deemed significant by the project-level paleontologist in consultation with the project's Planning Director, full-time monitoring shall be initiated at the project.
3. Paleontological monitors will be equipped to salvage fossils as they are unearthed to avoid construction delays. The monitor must be empowered to temporarily halt or divert equipment to allow removal of abundant or large specimens in a timely manner. Monitoring may be reduced if the potentially fossiliferous units are not present in the subsurface or, if present, are determined on exposure and examination by qualified paleontological personnel to have low potential to contain fossil resources. The monitor shall notify the project paleontologist, who will then notify the concerned parties of the discovery.
4. Paleontological salvage during trenching and boring activities is typically from the generated spoils and does not delay the trenching or drilling activities. Fossils will be collected and placed in cardboard flats or plastic buckets and identified by field number, collector, and date collected. Notes will be taken on the map location and

stratigraphy of the site, which will be photographed before it is vacated, and the fossils are removed to a safe place. On mass grading projects, discovered fossil sites will be protected by flagging to prevent them from being overrun by earthmovers (scrapers) before salvage begins. Precise location of the site is determined with the use of handheld GPS units. If the site involves remains from a large terrestrial vertebrate, such as a large bone(s) or a mammoth tusk, that is/are too large to be easily removed by a single monitor, a fossil recovery crew shall excavate around the find, encase the find within a plaster and burlap jacket, and remove it after the plaster is set. For large fossils, use of the contractor's construction equipment may be solicited to help remove the jacket to a safe location.

5. In accordance with the "Microfossil Salvage" section of the Society of Vertebrate Paleontology guidelines (2010:7), bulk sampling and screening of fine-grained sedimentary deposits (including carbonate-rich paleosols) must be performed if the deposits are identified to possess indications of producing fossil "microvertebrates" to test the feasibility of the deposit to yield fossil bones and teeth.
6. In the laboratory, individual fossils will be cleaned of extraneous matrix, any breaks will be repaired, and the specimen, if needed, will be stabilized by soaking in an archivally approved acrylic hardener (*e.g.,* a solution of acetone and Paraloid B-72).
7. Recovered specimens will be prepared to a point of identification and permanent preservation (not display), including screen-washing sediments to recover small invertebrates and vertebrates. Preparation of individual vertebrate fossils is often more time-consuming than for accumulations of invertebrate fossils.
8. Identification and curation of specimens into a professional, accredited public museum repository with a commitment to archival conservation and permanent retrievable storage (*e.g.,* SBCM) shall be conducted. The paleontological program should include a written repository agreement prior to the initiation of mitigation activities. Prior to curation, the lead agency (*e.g.,* the City of Ontario) will be consulted on the repository/museum to receive the fossil material.
9. A final report of findings and significance will be prepared, including lists of all fossils recovered and necessary maps and graphics to accurately record their original location(s). The report, when submitted to and accepted by the appropriate lead agency, will signify satisfactory completion of the project program to mitigate impacts to any potential nonrenewable paleontological resources (*i.e.,* fossils) that might have been lost or otherwise adversely affected without such a program in place.

VII. CERTIFICATION

I hereby certify that the statements furnished above and in the attached exhibits present the data and information required for this paleontological report, and that the facts, statements, and information presented are true and correct to the best of my knowledge and belief and have been compiled in accordance with CEQA criteria.

Qualifications of Key Personnel

Todd A. Wirths, MS, PG No. 7588

Senior Paleontologist

BFSA Environmental Services, A Perennial Company
14010 Poway Road • Suite A •
Phone: (858) 679-8218 • Fax: (858) 679-9896 • E-Mail: twirths@bfsa.perennialenv.com

Education

Master of Science, Geological Sciences, San Diego State University, California **1995**

Bachelor of Arts, Earth Sciences, University of California, Santa Cruz **1992**

Professional Certifications

California Professional Geologist #7588, 2003
Riverside County Approved Paleontologist
San Diego County Qualified Paleontologist
Orange County Certified Paleontologist
OSHA HAZWOPER 40-hour trained; current 8-hour annual refresher

Professional Memberships

Board member, San Diego Geological Society
San Diego Association of Geologists; past President (2012) and Vice President (2011)
South Coast Geological Society
Southern California Paleontological Society

Experience

Mr. Wirths has more than a dozen years of professional experience as a senior-level paleontologist throughout southern California. He is also a certified California Professional Geologist. At BFSA, Mr. Wirths conducts on-site paleontological monitoring, trains and supervises junior staff, and performs all research and reporting duties for locations throughout Los Angeles, Ventura, San Bernardino, Riverside, Orange, San Diego, and Imperial Counties. Mr. Wirths was formerly a senior project manager conducting environmental investigations and remediation projects for petroleum hydrocarbon-impacted sites across southern California.

SIGNATURE AND ENVIRONMENTAL PROFESSIONAL STATEMENT

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

APPENDICES

1. SUMMARY OF CONCLUSIONS

Ramboll US Consulting, Inc. (Ramboll) was retained by B9 Wanamaker Owner LLC (the "client") to perform a Phase I Environmental Site Assessment (ESA) of the site located at 1350 and 1375 South Woodruff Way in Ontario, California (herein referred to as the "facility" or the "site"), which is currently owned by Dennis A & Janet C Shannon Trustees. Ramboll's assessment was conducted in connection with a potential purchase of the site. The objective of the Phase I ESA, which was conducted in conformance with the scope and limitations of ASTM International's *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* E1527-13 (the "ASTM Standard"), was to identify Recognized Environmental Conditions (RECs), as defined in the ASTM Standard (see Section 7).

1.1 Site Summary

Citrus Motors operates a new and used auto dealer, auto servicing, and auto body shop located at 1350 (Citrus Kia) and 1375 (Citrus Ford) South Woodruff Way in Ontario, California. The approximately 16.01-acre site is developed with an approximately 10,600-square-foot building (herein referred to as the 1350 Building), which is located in the western portion of the site and an approximately 149,600-square-foot building (herein referred to as the 1375 Building).

The site was developed for agricultural (vineyard/orchard) use since at least 1938 until the early to mid-1980s when the eastern portion of the site was redeveloped for commercial/industrial purposes by Elixir Industries (manufacturer and fabricator of metal products). Construction of the 1375 Building was completed in 1987. In 1992, Janet C Shannon purchased the eastern portion of the site from Elixir Industries and in 1995, the western portion of the site was purchased by Janet C Shannon. In 1998, the 1350 Building was constructed on the western portion of the site. The site is currently owned by Dennis A & Janet C Shannon Trustees and has operated as an auto dealer, auto servicing, and auto body shop since 1992.

1.2 Recognized Environmental Conditions

Ramboll performed a Phase I ESA of the site located at 1350 and 1375 South Woodruff Way in Ontario, California in conformance with the scope and limitations of the ASTM Standard. Any exceptions to, or deletions from, this practice are described in Section 6.2 of this report. This assessment has revealed no RECs in connection with the site.

1.3 Other Findings

Although not considered a REC, Ramboll identified the following notable other findings. The term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

- **Past Industrial/Commercial Operations at the Site.** Elixir Industries occupied the eastern portion of the site from 1987 to 1992, but no detailed information is readily available in historical documents regarding Elixir Industries' operations on-site. There is no readily available information as to the specific use of chemicals or petroleum products during this time period, but there is no indication that these operations were chemically intensive or involved the use of significant amounts of petroleum products or other hazardous substances. In addition, the site has operated as an auto dealer, auto servicing, and auto body shop including a paint booth since 1992. These operations have involved the use of petroleum products, solvents, paints, and other chemicals. Since 1992, one below-grade feature (e.g., clarifier in the car wash area) has been used on-site that represents a potential conduit for chemicals and petroleum products to reach the subsurface. Because Ramboll's review did not identify documentation of a release, a suspected release, or a

potentially material threat of a release of a hazardous substance or petroleum product related to this matter, it is not considered a REC; however, absent further information regarding the specific nature of historical chemical use, chemical handling practices, and associated wastes, Ramboll cannot rule out the possibility that inadvertent spills or releases of chemicals or petroleum products may have occurred in the past.

- **Past Use of Site for Agricultural Orchards.** The site was previously used for agricultural purposes, including for vineyards/orchards, from at least 1939 until the 1980s. Past orchard operations may have involved the application of arsenical and lead-based pesticides commonly used on orchards in the first half of the 20th century, or other organic pesticides commonly used on orchards thereafter. Facility personnel reported no knowledge of past subsurface testing for any pesticides. Because Ramboll's review did not identify documentation of a release, a suspected release, or a potentially material threat of a release of a hazardous substance or petroleum product related to this matter, it is not considered a REC; however, absent further information, the potential presence of these compounds in the site subsurface cannot be ruled out. Ramboll notes that this matter is unlikely to result in regulatory scrutiny, assuming no changes to site use for commercial purposes. Ramboll further notes that the use of such substances in this region (which is and has been historically widely used for fruit production) would have been fairly widespread and ubiquitous.

A discussion of *de minimis* conditions identified during this review (if any) is presented in Section 6.1 of this report.

1.4 Non-Scope Considerations

Ramboll identified the following findings that relate to non-scope considerations (as discussed in Section 2.2), as detailed below:

- **Asbestos-Containing Materials (ACMs).** The buildings were constructed after asbestos was generally phased out of use in most building material applications in the 1980s. Although the possibility that asbestos is present in the building materials cannot be ruled out, the facility is unlikely to have significant quantities of ACMs. According to facility personnel, formal asbestos survey has not been conducted at the facility.
- **Water Intrusion/Mold.** Ramboll did not perform a mold survey at the site; however, facility personnel provided information regarding past water intrusion events. According to facility personnel, the site has not experienced significant water intrusion events.
- **Lead.** Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction dates of the buildings in the 1987 and 1998, it is unlikely that lead-based paint was used historically on facility structures. Facility personnel knew of no lead-based paint on structures at the facility. Ramboll observed the paint to be in generally good condition.
- **Radon.** Based on information included in the environmental database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per liter (pCi/L). The United States Environmental Protection Agency's (USEPA's) continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, of 7 radon test results in the

same zip code as the site, none were greater than 4 pCi/L. The median first floor radon value for 18 sites surveyed in San Bernardino County was 0.678 pCi/L.

2. INTRODUCTION

2.1 Scope of Work

Ramboll conducted a Phase I ESA of the Citrus Motors facility located in Ontario, California. The Phase I ESA relied upon the references noted below and included the following tasks:

- A visit to the site by Stephanie Eckelman of Ramboll on October 6, 2021 to observe the exterior and interior features of the site and to identify the uses and conditions specified in Sections 9.4.1 through 9.4.4.7 of the ASTM Standard. In addition, Ramboll observed the adjoining properties from the site or adjacent public thoroughfares. Photographs taken during the site visit are presented in Appendix A.
- An interview during the site visit with the following individual (year of initial hire at the site indicated in parentheses): Mario Ramos, Citrus Motors Service Manager (2002). The aforementioned individual is referred to herein as "facility personnel". The facility personnel interviewed by Ramboll were identified by the Company as having good knowledge of the uses and physical characteristics of the site.
- A review of information contained in federal and state environmental databases, as obtained from the sources noted below:
  - A radius report prepared by EDR, Inc. (EDR, see Appendix B), which presents the results of searches of federal and state databases for the site, as well as properties near the site. The radius searched for each database, as well as the databases themselves, was selected in accordance with the ASTM Standard.
  - The United States Environmental Protection Agency's (USEPA's) EnviroFacts database, which provides site information contained in multiple USEPA regulatory databases.
  - The California State Water Resources Control Board (SWRCB) GeoTracker database and the Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's EnviroStor (EnviroStor) database for the site and immediately adjacent properties, which contain information about certain regulated facilities in California.
  - A review of the California Geologic Energy Management Division (CalGEM) website, which provides information regarding the locations of oil and gas wells on and in the vicinity of the site.
  - A review of the National Pipeline Mapping System (NPMS) Public Viewer website, which provides information regarding the locations of hazardous liquid and gas pipelines on and in the vicinity of the site.
- A review of standard historical sources (included as Appendix C) and local agency inquiries, as defined in the ASTM Standard. The following resources were reviewed:
  - Readily available historical sources (as identified in Section 4.2 of this report and included as Appendix C) to develop a history of the previous uses of the site and surrounding area.
  - Historical and site-specific information obtained from the following local agencies: the San Bernardino County Assessor's Office (Assessor) and the San Bernardino County Fire Department (Fire Department). Ramboll also requested information from the Ontario Fire Department and San Bernardino County Environmental Health Department (EHD), but personnel from these agencies reported having no information pertaining to the site.

- A review of documents provided to Ramboll by facility personnel included the following previous environmental assessment report, which is included as Appendix D:
  - *Phase I Environmental Site Assessment, Citrus Ford, 1375 South Woodruff Way, Ontario, California*, prepared by Panthers Engineering and Science Inc. (Panthers), dated March 16, 2020 (the "2020 Phase I report").
- A review of physical setting sources, as defined in the ASTM Standard, including:
  - The current United States Geological Survey (USGS) 7.5-minute topographic map that shows the area on which the site is located.
  - Geologic, hydrogeologic, or hydrologic sources as provided in the environmental database report and in the previous environmental reports for the site, as listed above.
- A search for environmental liens or other activity and use limitations (AULs) for the site, provided by the third-party database provider (as shown in Appendix E). Ramboll ordered the lien search using the parcel numbers believed to be associated with the site, as obtained from the local tax assessor's office and other online resources.
- A review of any information provided by the user of this assessment, including information consistent with Appendix X3 of the ASTM Standard. Pertinent information, if any, is discussed in the appropriate sections of this report.

This assessment was conducted in accordance with the methodology specified in ASTM Standard E1527-13, as agreed upon by Ramboll and B9 Wanamaker Owner LLC in September 2021. The standard ASTM scope was expanded to include a limited review of asbestos-containing materials, lead-based paint, mold, or radon, based solely on: (i) the ages of the building (and prior reports, if any), for the potential presence of asbestos and lead-based paint; (ii) information and answers provided on a water intrusion questionnaire to be completed during the site walk with site representatives for the potential presence of mold, and (iii) information provided in the EDR report for the potential presence of radon.

2.2 Significant Assumptions

In conducting this review, no significant assumptions were made, except for the following:

- Site-specific field measurements or other detailed hydrogeological information was not publicly available or reasonably ascertainable. In the absence of such data, Ramboll has assumed that the flow direction of shallow groundwater beneath the site and in the local vicinity generally mimics surface topography. Therefore, in evaluating potential on-site impacts from off-site sources, those off-site facilities not located adjacent to or within one-quarter mile upgradient of the site are not considered to represent a significant concern to the site. This interpretation is based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within the unsaturated soil for a significant distance, although a hazardous material can migrate in the groundwater in a generally downgradient direction. There are, however, limits to this interpretation

2.3 Reliance and General Limitations

This report has been prepared for the exclusive use of B9 Wanamaker Owner LLC and may not be relied upon by any other person or entity without Ramboll's prior express written permission.

This report is considered current only for a period of 180 days from the site inspection. The conclusions presented in this report represent Ramboll's professional judgment based upon the

information available and conditions existing as of the date of this report. In performing its assignment, Ramboll must rely upon publicly available information, information provided by the client, and information provided by third parties. Accordingly, the conclusions in this report are valid only to the extent that the information provided to Ramboll was accurate and complete. This review is not intended as legal advice, nor is it an exhaustive review of site conditions or facility compliance. Ramboll makes no representations or warranties, expressed or implied, about the conditions of the site.

Ramboll's scope of work for this assignment did not include collecting samples of any environmental media. As such, this review cannot rule out the existence of latent conditions including contamination not identified and defined by the data and information available for Ramboll's review; however, this report is intended, consistent with normal standards of practice and care, to assist the client in identifying the risks of such latent conditions.

The scope of work for this assessment did not include an asbestos survey or inspection. According to federal OSHA regulations (29 CFR §1910.1001) and the Model Accreditation Plan (MAP; 40 CFR Part 763, Subpart E, Appendix C), the inspection, testing, evaluation, and/or sampling of suspect asbestos-containing materials must be conducted by an accredited inspector; these activities were not performed as part of this environmental review. Comments in this report regarding the condition of building materials at the site, including presumed or suspect ACMs, represent only Ramboll's observations at the time of the site visit and are not intended to be consistent with definitions regarding ACMs condition in the Asbestos Hazard Emergency Response Act (AHERA) or in other federal or state asbestos regulations or industry standards.

Other issues considered outside the scope of the ASTM Standard and this review include lead in drinking water, wetlands, polychlorinated biphenyls (PCBs) in building materials, cultural and historic resources, ecological resources, endangered species, fire safety, and high voltage power lines.

3. SITE DESCRIPTION

3.1 Site Setting

Dennis A and Janet C Shannon Trustees own the site, which is leased by Citrus Motors to operate an auto dealer, auto servicing, and auto body shop located at 1350 and 1375 South Woodruff Way in Ontario, California (the "site" or the "facility"). The approximately 16.01-acre site is located approximately 6 miles east of downtown Ontario, California (Figure 1).

According to the Assessor's Office, the site comprises assessor's parcel numbers (APNs) 0238-201-41-0000 and 0238-221-22-0000.

The site is developed with an approximately 10,600-square-foot building (herein referred to as the 1350 Building), which is located in the western portion of the site and an approximately 149,600-square-foot building (herein referred to as the 1375 Building), which is located in the eastern portion of the site. The buildings house auto sale showrooms, auto servicing, and auto body shop operations (Figure 2).

The primary site access is via East Jurupa Street along the southern site boundary. South Woodruff Way splits the site into two parcels with the 1350 Building to the west and the 1375 Building to the east. Each building has an associated asphalt parking lot. There are no on-site surface water bodies.

Table 1 provides an overview of physical setting and utility information for the site.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Topography		
Elevation (above mean sea level)	USGS topographic map; Google Earth	Ranges from approximately 910 feet near the southern site boundary to approximately 916 feet near the northern site boundary.
Topographic Gradient	USGS topographic map; visual observations	Relatively flat on-site, with a gentle downward slope to the south. Regional topography is also relatively flat and slopes gently downward to the south.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Local Land Use	Visual observations	The facility is located in a mixed industrial and commercial land use area. North: Wanamaker Avenue, followed by Vecelo, Chinese Laundry DC, Sunlight Supply, DSM Nutritional Products, and an unlabeled warehouse building. East: Commercial and warehouse properties including Webber EMI, Maney Aircraft, Universal Plastic Bag Manufacturing, and Ace Calendaring Enterprises. The 15 (Ontario) Freeway lies beyond. South: Verizon transformer station, Carl's Jr, and an ARCO service station, followed by East Jurupa Street and Toyota North American Parts facility. West: South Rockefeller Avenue, followed by commercial warehouse buildings including Nexen Tire Distribution Center, and Converse. Milliken Avenue is beyond. Ramboll did not observe any conditions on adjacent properties that represent a potential contamination concern to the site, other than the ARCO service station adjacent to the southwest of the site. See Section 4.1 for additional information on the ARCO service station.
Nearest Residence	Visual observations	Approximately 1.9 miles northwest of the site.
Hydrology		
Storm Water Runoff	Visual observations	Percolates into the ground surface at landscaped areas or enters catch basins that discharge to the municipal storm sewer system.
Nearest Surface Water Body to the Site	USGS topographic map; Visual observations	Day Creek and an unnamed reservoir are located approximately 0.7 miles southeast at the nearest point. Day Creek is a tributary of the Santa Ana River, which ultimately discharges into the Pacific Ocean.
Flood Plain	FEMA*; Facility personnel	Facility personnel reported no known occurrences of flooding at the site. The site is not located within a 500-year flood zone.
Wetlands	NWI*; Visual observations	There are no federally-designated wetlands on-site, although wetland areas are present approximately 0.7-mile southeast of the site. Ramboll did not identify any obvious suspected wetlands at the site during the site visit.
Geology and Hydrogeology		
Presumed Direction of Shallow Groundwater Flow	USGS topographic map	Based on the topographic gradient and the southerly flow direction of the Dry Creek, shallow groundwater likely flows to the south.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Depth to Groundwater	Not readily available; US EPA Environmental Indicator Signature Page-Groundwater	Information not readily available. However according to a vicinity property approximately one mile northeast of the site, the uppermost aquifer unit in the Chino Basin varies between approximately 123 and 705 feet below ground surface (bgs). Groundwater is likely approximately 300 feet bgs.
On-site Wells	Facility personnel; Visual observations	No production, monitoring, or injection wells on-site.
Oil & Gas Wells	Facility personnel; Visual observations; CalGEM	No oil & gas wells were identified on-site.
On-Site Hazardous Liquid and Gas Pipelines	NPMS Public Viewer website	There are no gas transmission or hazardous liquid pipelines on or adjacent to the site.
Nearest Groundwater Supply Wells	Database report	One federally registered well is present between one-eighth mile and one-quarter mile west-southwest of the site; it is not registered as a public supply well. Thirteen state-registered wells that may be used for water supply are present within one-eighth mile and one mile in multiple directions of the site.
Geologic Conditions	NCSS*; US EPA Environmental Indicator Signature Page-Groundwater	Regional soils are from the Delhi unit, which is comprised of somewhat excessively drained fine sands with high infiltration rates. The average lithologic unit underlying the area around the site is characterized as being moderately well-sorted, subrounded and fine to medium grained sand. Soils in the vicinity of the site appear to be fine to coarse-grained sand to silty sand with interbedded sandy silts within the top 10 to 25 feet.
Site Utility Information		
Heating and Cooling Equipment	Facility personnel	The parts, sales and service office areas in the 1375 Building are heated and cooled via packaged HVAC units. The 1350 Building contains packaged roof-top units for heating and cooling. The shop floor at the 1375 Building is cooled by approximately 8 evaporative "swamp" coolers.
Natural Gas Service	Facility personnel	The site is provided with natural gas service from Southern California Gas Company.
Use of Fuel Oil for Building Heat	Facility personnel	No known current or former use of fuel oil for building heat.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Foam-based Fire Suppression System	Facility personnel	According to facility personnel, the site is not equipped with a built-in foam-based fire suppression system.
Water Supply	Facility personnel	The facility receives drinking water from Ontario Water Utility Department.
Sanitary Sewer	Facility personnel	The facility discharges wastewater to the municipal sanitary sewer system.
Septic Systems	Facility personnel	No identified current or former septic systems.

Notes:

FEMA = Federal Emergency Management Agency; NCSS = National Cooperative Soil Survey; NWI = National Wetlands Inventory

* - Source was provided in the environmental database report.

During the site visit, Ramboll walked or drove by the borders of the properties that are adjacent to the site. Ramboll did not enter the neighboring properties.

3.2 Current Use of the Site

3.2.1 Current Operations

Citrus Motors employs 168 individuals in the operation of a new and used automobile dealership and repair service facility. Major operations at the 1350 Building are limited to sales and office operations with an associated paved parking lot area. Major operations conducted at the 1375 Building include new and used vehicle sales, vehicle servicing, vehicle painting and body shop repair, vehicle washing, and office functions. The service areas include numerous service bays, automotive fluid collection receptacles, and 78 aboveground hydraulic lifts comprised of a hydraulic oil reservoir (up to three gallons in size) affixed to an adjacent post that feeds an in-line canister affixed to the lift. Three spray-paint booths are located within the body-shop area. One vehicle washing area is located in the southern portion of the 1375 Building and is connected to one three-stage subsurface clarifier, which conveys wastewater to the sanitary sewer. A car rim accessory detail area noted as the "rim shop" is located in the northern portion of the 1375 Building.

Ancillary operations include the operation of support equipment (e.g., four aqueous parts washers, eight roof-top evaporators, welding machines, metal brake grinders, two air compressors, one propane powered forklift, one scissor lift, one boom lift, and a deionization system for the automobile wash), the receipt of vehicle parts and maintenance-related chemicals, the management of maintenance-related wastes, and administrative operations.

The primary raw material used at the site is motor oil, and smaller quantities are used of automatic transmission fluid, antifreeze (coolant), other automotive fluids (e.g., brake fluids, oils, greases, and lubricants), non-chlorinated aqueous degreasers, vehicle washing soap, paints, and thinners. In addition, the facility uses automotive air conditioning refrigerant and maintenance-related materials, such as non-chlorinated degreasers and detergents.

According to facility personnel, Citrus Motor operations have remained generally consistent during its period of occupancy at the facility. Facility personnel were not aware of any historical use of chlorinated solvents at the site; however, Citrus Motors was not the original occupant of the majority of the site and chemical use prior to Citrus Motors occupancy is unknown.

3.2.2 Waste Management

Hazardous wastes generated at the 1375 Building consist primarily of used oil, antifreeze, waste oil and fuel filters, transmission fluid, waste paint, clarifier sludge, and spent automotive batteries. The used cartridge paper filters and used metal oil filters are collected in 55-gallon drums, the used antifreeze is collected in two large totes, and the used oil is collected in a 2,000-gallon double-walled aboveground storage tank. Waste paints and paint-related solvents associated with the spray paint booths are mostly stored in 55-gallon drums on secondary containment adjacent to the spray paint booths. Waste fuel collected from customer vehicles is stored within one 55-gallon drum located in the repair service area. Wastes are stored near the generation area until off-site shipment to permitted waste management facilities by CleanTech on a quarterly basis, with the exception of spent automotive batteries, which are returned to the battery supplier. Hazardous waste is not generated at the 1350 Building.

Nonhazardous waste generated at the site consists of general trash, scrap metal, waste vehicle tires, and wooden pallets. General facility trash is collected in 4-cubic yard dumpsters located around the site for removal by the City of Ontario Integrated Waste Department. Waste vehicle tires, scrap metal, and pallets are recycled off-site by a third-party hauler.

3.2.3 Wastewater and Storm Water

Sanitary wastewater, which includes wastewater from bathroom, break room and kitchen areas, is discharged to the municipal sanitary sewer system.

Process wastewater generated by the facility consists primarily of paint supply wash water, automobile wash water, and floor mop water. Paint supply wash water is collected in 55-gallon drums for off-site shipment by CleanTech. Automobile wash water and floor and scrubber mop water is directed through trench drains, into a three-stage clarifier before entering the sanitary sewer system. CleanTech cleans out the clarifier every two years. Air compressor condensate is discharged onto the concrete floor within the building.

Storm water at the site infiltrates into landscaped areas or is directed via concrete drainage swales to storm drains. These storm drains discharge the storm water to the municipal storm sewer system located along either South Woodruff Way or South Rockefeller Avenue.

3.2.4 Air Emissions

Air emissions from the facility are limited to combustion products resulting from the operation of the site's packaged comfort heating and air conditioning system, welding emissions from minor maintenance welding operations, and volatile organic compounds (VOCs) from the site's three spray-paint booths. Control equipment associated with the spray booths appeared to be a vacuum and filter system.

4. REVIEW OF PUBLIC RECORDS AND OTHER INFORMATION SOURCES

4.1 Environmental Regulatory Database Review

Ramboll contracted with EDR in September 2021 to prepare of summary of listings in federal and state agency databases for the site and facilities within applicable radii of the site, as specified by the ASTM standard.[1] A copy of the environmental database search report is presented in Appendix B.

4.1.1 Database Review for Site

Ramboll reviewed the results of the state and federal environmental database searches performed by the third-party database provider (see Appendix B) and also reviewed information available in the GeoTracker and EnviroStor databases. The site is listed on numerous environmental databases, as discussed in Table 2.

Table 2: Summary of Environmental Database Listings for the Site

Summary of Information Contained in Database	Ramboll's Comments
Citrus Motors is listed in the California Environmental Protection Agency Regulated Site Portal (CERS) HAZ WASTE, CERS TANKS, Aboveground Storage Tank (AST), Resource Conservation Recovery Act (RCRA) small quantity generator (SQG), and San Bernardino County Permit (San Bern Co Permit) databases. The site is listed as having a registered 7,400-gallon petroleum AST. The site is currently listed as a large quantity generator (LQG); however, historically the site operated as a SQG generating wastes including off-specification, aged/surplus organics, other inorganic solid waste, unspecified organic liquid mixture, unspecified solvent mixture, other organic solids, aqueous solution with < 10 total organic residue, and liquids with halogenated organic compound > 1,000 mg/L (milligrams per liter). The site has received violations in 2016 and 2019 relating to hazardous materials storage/handling requirements. The listing indicates that the facility achieved compliance during follow up inspections following each violation.	Compliance related listings do not suggest a contamination concern to the site. Wastes generated at the site are further discussed in Section 3.2.2. The 7,400 gallon AST is no longer present. Current AST storage is summarized in Section 5.2.2

Notes:

* The site is also listed on the following databases related to regulatory compliance: Facility Index System/Facility Registration System (FINDS), Enforcement & Compliance History Information (ECHO), Facility and Manifest Data (HAZNET), and Hazardous Waste Tracking System (HWTS), and CERS. Listings on these databases, by themselves, are not necessarily indicative of contamination.

4.1.2 Database Review for Adjoining Properties

Based on a review of the environmental database search report, Ramboll identified the adjoining properties listed in Table 3 on databases indicative of a potential contamination concern.

[1] EDR uses the term "radii" to refer to the ASTM terminology "approximate minimum search distance" in the environmental database report.

Table 3: Contamination-Related Database Listings for Adjoining Properties [1]

Listing Name or Address and Location Relative to the Site	Summary of Information Contained in Database	Ramboll's Comments
Carl's Junior #668 4555 Jurupa Avenue (Adjoining to the south)	The property is listed on the California Hazardous Material Incident Report System (CHMIRS) and San Bern Co Permit database for a release of gasoline in 2001. According to the listing, 5-gallons of gasoline was released from a ruptured gas tank of a passenger vehicle. The gasoline reportedly entered the storm drain. The status of cleanup is unreported.	Given the small quantity of gasoline released and that the incident is not currently under regulatory scrutiny, this matter is unlikely to present an environmental concern to the site.
Auto Chargers 4525 Jurupa Avenue (Adjoining to the south)	The property is listed on the CERS HAZ WASTE, CERS TANKS, San Bern Co Permit, underground storage tanks (UST), and EDR Exclusive Historical Auto Stations (EDR HIST AUTO) databases. According to the listings, the property is listed as a generator of hazardous waste. The property received several violations in 2014, 2015, 2016, 2017, and 2018 relating to faulty sensor equipment, secondary containment failures, and hazardous waste storage requirements. The property is also listed as having registered USTs at the property. The property was listed as a gasoline service station from 2007 to 2014.	Listings on these databases, by themselves, are not necessarily indicative of contamination.
Arco Service Station #5965 4525 Jurupa Avenue (Adjoining to the south)	The property is listed on the UST and RCRA NonGen/NLR databases. According to the listings, the property is listed as a non-generator of hazardous waste in 2009; however, historically the property operated as a SQG generating wastes including ignitable waste and benzene. No violations were reported. The property also has registered USTs.	Listings on these databases, by themselves, are not necessarily indicative of contamination.
Frontier California Airport 1315 Wanamaker Avenue (Adjoining to the north)	The property is listed on the San Bern Co Permit database for having an active hazardous material ("hazardous materials 1-3 chemicals special") permit. No further information is provided.	Listings on this database, by itself, is not necessarily indicative of contamination.

Table 3: Contamination-Related Database Listings for Adjoining Properties [1]

Listing Name or Address and Location Relative to the Site	Summary of Information Contained in Database	Ramboll's Comments
Ace Calendaring Ent. Corp. 1311 Wanamaker Avenue (Adjoining to the east)	The property is listed on the CERS HAZ WASTE, RCRA non-generator/no longer regulated (NonGen/NLR), San Bern Co Permit, and CERS databases. According to the listing, the property is listed as a generator of hazardous waste generating wastes including other organic solids and waste oil/mixed oil. The property has received several violations in 2014, 2017, and 2021 relating to hazardous material requirements. The listing indicates that the property achieved compliance during follow up inspections following each violation. The property formerly operated as a non-generator of hazardous waste.	Listings on these databases, by themselves, are not necessarily indicative of contamination.
Gantom Industries 1311 Wanamaker Avenue (Adjoining to the east)	The property is listed as a RCRA-SQG in 1994. No violations are reported.	Listings on this database, by itself, is not necessarily indicative of contamination.
Maney Aircraft Inc 1305 S Wanamaker Avenue (Adjoining to the east)	The property is listed on the RCRA NonGen/NLR, CERS HAZ WASTE, CERS TANKS, San Bern Co Permit, and CERS databases. According to the listings, the property has a registered petroleum AST. The property is also listed as a SQG of hazardous waste. The property has received several violations in 2016 relating to hazardous material requirements. The listing indicates that the property achieved compliance during follow up inspections following each violation.	Listings on these databases, by themselves, are not necessarily indicative of contamination.

Table 3: Contamination-Related Database Listings for Adjoining Properties [1]

Listing Name or Address and Location Relative to the Site	Summary of Information Contained in Database	Ramboll's Comments
Emission Methods Inc DBA Webber EMI 1307 S Wanamaker Avenue (Adjoining to the east)	The property is listed on the RCRA NonGen/NLR, CERS HAZ WASTE, San Bern Co Permit, and CERS databases. According to the listings, the property is listed as a conditionally exempt SQG of hazardous waste. The property has received several violations in 2014 and 2018 relating to hazardous material requirements. The listing indicates that the property achieved compliance during follow up inspections following each violation.	Listings on these databases, by themselves, are not necessarily indicative of contamination.
Universal Plastic Bag Manufacturing Company 1309 S Wannamaker Avenue (Adjoining to the east)	The property is listed on the RCRA NonGen/NLR, CERS HAZ WASTE, San Bern Co Permit, and CERS databases. The property is listed as a conditional exempt SQG of hazardous waste. The property received various violations in 2014, 2017, 2019, and 2020 relating to administrative, hazardous materials labeling/disposal requirements. The listing indicates that the property achieved compliance during follow up inspections following each violation.	Listings on these databases, by themselves, are not necessarily indicative of contamination.

Notes:

[1] Ramboll's analysis of adjoining properties was based on observations made during the site reconnaissance (as discussed in Table 2) and location information for off-site listings as presented in the database report. Also, for purposes of this analysis, Ramboll considers as "adjoining" properties that are adjacent, even if separated by a road or other physical barrier. Ramboll has not included a discussion of compliance-related databases in this table, as Ramboll considers it unlikely that off-site properties listed on compliance-related databases without indication of a release or chemical mishandling represent a potential risk for contamination to the site.

4.1.3 Database Review for Other Surrounding Properties

There are several listings in the environmental database report for non-adjoining off-site facilities within applicable ASTM search radii; however, Ramboll has not identified any properties that are likely to represent a potential contamination concern to the site.

The database report indicates that poor or inadequate address information was available for several properties located in the vicinity of the site; therefore, these properties could not be readily mapped by the third-party provider. Because the location of these properties with respect to the site could not be evaluated, Ramboll is limited in its ability to express an opinion regarding the potential for impact to the site from these properties. It was beyond the scope of this review to accurately locate each of

the unmapped properties identified by the third-party provider; however, Ramboll reviewed the list of unmapped properties and verified that none appeared to be adjacent to the site.

4.2 Historical Uses of the Site and Adjacent Properties

4.2.1 Past Uses of the Site

The site was developed for agricultural (vineyard/orchard) use since at least 1938 until the early to mid-1980s when the eastern portion of the site was redeveloped for commercial/industrial purposes by Elixir Industries (manufacturer and fabricator of metal products). Construction of the 1375 Building was completed in 1987. In 1992, Janet C Shannon purchased the eastern portion of the site from Elixir Industries and in 1995, the western portion of the site was purchased by Janet C Shannon. In 1998, the 1350 Building was completed on the western portion of the site. The site is currently owned by Dennis A & Janet C Shannon Trustees and has operated as an auto dealer, auto servicing, and auto body shop since 1992.

A summary of Ramboll's key observations from the available historical sources is presented in Table 4.

Table 4: Summary of Key Observations from Historical Sources for the Site

Historical Source	Key Observations Regarding Site History
Aerial Photographs (1938, 1948, 1953, 1959, 1967, 1975, 1985, 1989, 1990, 1994, 2002, 2006, 2009, 2012, and 2016 Satellite Imagery [1] (1985 to 2021)	The site appears developed for agricultural purposes (vineyard/orchard) from at least 1938 until the mid-1980s when the site and surrounding properties were developed for commercial and industrial purposes. In the 1985 photograph, a small structure is present in the western portion of the site. The 1989 photograph shows the eastern 1375 Building and associated parking lot developed in the eastern portion of the site along with the small structure in the western portion of the site. By the early 2000s, the 1350 Building and associated parking lot is constructed in the western portion of the site and the small structure that was present in the western portion of the site appears to have been demolished. The 2002 and subsequent photographs show the site in its present configuration, with two buildings present and associated parking lots. No concerns are noted.
Topographic Maps (1897 to 2012)	No development is depicted on the maps until 1953 when the site appears to be used for agricultural purposes (vineyard/orchard) up until 1981. The 2012 map depicts the site as developed with a roadway traversing from north to south in the center of the site. No concerns are noted.
City Directory Abstracts (1923, 1928, 1950, 1957, 1960, 1964, 1994, 1995, 1999, 2001, 2004, 2009, 2015)	The occupants for the 1350 Building include Ontario Kia (2014) and Citrus Kia (2014 and 2017). The occupants for the 1375 Building include Citrus Lincoln Mercury (1999), Citrus Motors Ontario (2003, 2008, 2009, 2014, and 2017), Citrus Ford (2003, and 2008), Hertz (2004, 2008, and 2009), and Citrus Motors Auto Body (2003, 2008, 2014, and 2017),
Lien search report	The lien search report indicates that Dennis A & Janet C Shannon Trustees acquired the western portion of the site in 1995 from Janet C Shannon and the eastern portion of the site from Bombay Partners LP in 1996. No liens or activity and use limitations (AULs) are associated with the site.

Table 4: Summary of Key Observations from Historical Sources for the Site

Historical Source	Key Observations Regarding Site History
San Bernardino County Assessor's Portal	According to the Assessor's website, the site comprises APN 0238-201-41-0000 (5.5-acres) and 0238-221-22-0000 (10.51-acres). The approximately 1375 Building was constructed in 1987 and the 1350 Building was constructed in 1998. Janet C Shannon purchased the western portion of the site in 1992 from Elixir Industries who owned the western portion of the site since 1986. Operations and chemical use/storage during Elixir Industries (a manufacturer and fabricator of metal products) occupancy at the site from 1987 to 1992 are unknown.
San Bernardino County Fire Department (Fire Department)	Fire Department records indicate that a former address associated to the site is 1315 Wanamaker Drive.

Notes:

[1] In addition to aerial photographs provided by the third-party provider, Ramboll viewed historical satellite imagery provided via Google Earth. Printed copies were not obtained, and imagery dates were not independently verified.

The third-party provider reported that Sanborn fire insurance map coverage is not available for the site.

4.2.2 Past Uses of Adjacent Properties

The properties in the vicinity of the site have primarily been used for agricultural purposes (vineyard/orchard) since as early as the late 1930s to approximately the mid-1980s. By the late 1980s, most of the surrounding properties to the north appear to have been developed with commercial and industrial buildings and by the early 2000s, properties to the south, east, and west, have been developed with commercial and industrial buildings. Notable operations on surrounding properties include the Arco gas station (adjacent to the south and west), a Toyota auto parts manufacturing facility to the south, and a Universal Plastic Bag Manufacturing Company facility to the east.

4.3 Review of Local and State Agency Information

Ramboll visited or otherwise contacted local governmental agencies and regulatory bodies for information relating to the site. An overview of the findings of this review is presented in Table 5.

Table 5: Local Agency Information for the Site

Agency Contacted/ Document Reviewed	Information Obtained
City of Ontario's Building Department (Building Department)	Ramboll requested records from the Building Department requesting information pertaining to historical site information including historical permits, and certificates of occupancy. Records received from the Building Department include wall signs, electric, plumbing, sewer/water permits that were approved.

Table 5: Local Agency Information for the Site

Agency Contacted/ Document Reviewed	Information Obtained
City of Ontario's Fire Department	Ramboll requested records from the City of Ontario's Fire Department requesting information pertaining to UST closures and emergency/environmental responses at the site. The City of Ontario's Fire Department indicated that records were held at the San Bernardino County Fire Department, as the county fire department is the Certified Unified Program Agency (CUPA).
San Bernardino County Fire Department (Fire Department)	Ramboll requested records from the Fire Department requesting information pertaining to UST closures and emergency/environmental responses at the site. The Fire Department indicated that the facility has several active permits including a LQG permit, Hazardous Materials 11-30 Chemicals Handler permit, and a APSA 1,320-10,000 Gal. Fac. Capacity permit. The Fire Department also indicated that it did not have any records pertaining to USTs, hazardous material incidences/complaints, or site remediation. Records received from the Fire Department for the current site address and 1315 Wanamaker Drive include annual permits (as described above), inspection reports, notices of violations, certificates of compliance, hazardous waste storage area weekly inspection checklists, and inventory summaries. No issues of concern were noted.
San Bernardino County Environmental Health Department (EHD)	Ramboll requested records from the San Bernardino County EHD for information regarding soil or groundwater investigations, USTs, LUSTs, hazardous materials inspections, or violations/permits for the site. The EHD reported no records on file for the site.
Lien and Activity and Use Limitation (AUL) Search Report	According to a lien and activity and use limitation (AULs) search report provided by EDR, there are no liens or AULs associated with the site.

4.4 Previous Environmental Assessments and Activities

Based on a review of historical site documents and interviews with facility personnel, prior environmental assessment activities have been conducted at the site, as summarized below. Pertinent historical and site-related information contained in the prior report has been incorporated into other sections of this report.

- **2020 Phase I Environmental Site Assessment.** A Phase I ESA was conducted at the eastern portion of the site (1375 Building) by Partner in 2020. The 2020 Phase I report did not identify any concerns with respect to soil and groundwater conditions. Although not a REC, the 2020 Phase I report identified an environmental issue related to extended site use as an automobile sale and repair facility equipped with spray-paint booths and a clarifier in the car wash area. Partner concluded that no further investigation was warranted at the time of the report.

4.5 User-Provided Information

Ramboll provided the client with a User Questionnaire (consistent with Appendix X3 of the ASTM Standard) that requested information relating to environmental liens, activity use limitations (AULs), specialized knowledge of the site, site value diminution, chain-of-title, or any other commonly known or obvious indications of site contamination, that was not otherwise provided to Ramboll. The user did not provide any information that was not otherwise obtained and reviewed by Ramboll.

5. SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

Ramboll conducted a visit to the site on October 6, 2021. During the site visit, observations of both the interior of the buildings and exterior portions of the site were made to evaluate if any RECs, as defined in Chapter 7, are present.

5.2 General Site Setting and Observations

Ramboll made observations concerning all of the interior and exterior issues specified in Sections 9.4.2 through 9.4.4 of the ASTM E1527-13 Standard. The presence or absence of each issue of environmental interest or concern is noted in Table 6. Additional information regarding observed and historical items is provided in the sections following the table.

Table 6: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
	Interior and Exterior Issues	
9.4.2.1	Current use(s) of the property	See Section 3.2
9.4.2.2	Past use(s) of the property	See Section 4.2
9.4.2.3	Hazardous substances and petroleum products used, treated, stored, disposed of, or generated on the property in connection with identified present or past uses	**Present** (see Section 5.2.1)
9.4.2.4	Storage tanks: Underground storage tanks (fill ports, vent pipes, manholes) Aboveground storage tanks	 Absent **Present** (see Section 5.2.2)
9.4.2.5	Odors (strong, pungent or noxious)	Absent
9.4.2.6	Pools of liquid, standing surface water or sumps	Absent
9.4.2.7	Drums of hazardous substances or petroleum products (five-gallon, 55-gallon or totes)	**Present** (see Section 5.2.1)
9.4.2.8	Hazardous substance and petroleum product containers (not necessarily in connection with identified uses)	Absent
9.4.2.9	Unidentified substance containers suspected of containing hazardous substances or petroleum products	**Present** (see Section 5.2.1)
9.4.2.10	Polychlorinated biphenyls (PCBs) Electrical equipment on-site (e.g., transformers, capacitors) Electrical equipment known or likely to contain PCBs Hydraulic equipment on-site (e.g., elevators, truck dock lifts) Hydraulic equipment known or likely to contain PCBs	(see Section 5.2.3) **Present** Unlikely **Present** Unlikely

Table 6: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
Interior Issues		
9.4.3.1	Heating/cooling systems	**Present** (see Table 1)
9.4.3.2	Stains or corrosion on interior floors, walls or ceilings (except for staining from water)	**Present** (see Section 5.2.5)
9.4.3.3	Floor drains and interior sumps	**Present** (see Section 3.2.3)
Exterior Issues		
9.4.4.1	Pits, ponds or lagoons on property or adjacent sites	**Present** (see Section 5.2.4)
9.4.4.2	Stained soil or pavement	**Present** (see Section 5.2.5)
9.4.4.3	Stressed vegetation (from other than insufficient water)	Absent
9.4.4.4	On-site solid waste disposal; areas apparently filled or graded by non-natural causes; or mounds or depressions suggesting solid waste disposal	Absent
9.4.4.5	Wastewater or other liquid (including storm water) or any discharge into a drain, ditch, underground injection system or stream on or adjacent to the property	**Present** (see Section 3.2.3)
9.4.4.6	Wells (including dry wells, irrigation wells, injection wells, abandoned wells, or other wells)	Absent
9.4.4.7	Septic systems or cesspools	Absent
Non-Scope Considerations		
N/A	Asbestos Containing Materials	(see Section 5.2.6)
N/A	Lead-Based Paint	(see Section 5.2.7)
N/A	Water Intrusion	(see Section 5.2.8)

Table 6: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
N/A	Radon	(see Section 5.2.9)

Notes:

Observations noted in this table and discussed further below are based on information obtained during the site visit and from a review of the sources summarized in Section 4.

See the ASTM Standard for a detailed description of the issues included in each referenced ASTM section.

Per the ASTM Standard, fluorescent light ballasts likely to contain PCBs are not considered.

N/A – Not applicable.

5.2.1 Hazardous Substances and Petroleum Products

Chemical use at the 1350 Building is limited to janitorial sanitizers and detergents. The primary chemicals used at the 1375 Building include gasoline, engine oil, engine coolant, non-chlorinated solvents for parts cleaning, greases, brake cleaner, spray paint gun cleaner, automotive paints, axel lubricants, transmission fluid, and hydraulic fluid. In addition, Citrus Motors uses maintenance-related materials, such as fuels, oils, lubricants, greases, non-chlorinated degreasers, welding gases, refrigerant chemicals, and sanitizers and detergents. Several dedicated drum and other storage areas are maintained at the 1375 Building as follows:[2]

- VOC-compliant solvents and paints associated with the spray paint booths are located within shelving, fire safety cabinets or in 5-gallon drums within the body shop area.
- Compressed N.O.S. gas cylinders are stored within the body shop area. One propane-powered forklift is located at the site. The propane storage cage, containing four propane tanks, is located along the northern wall of the 1375 Building.
- Vehicle fueling is conducted on-site by authorized personnel from a 2,000-gallon gasoline AST located along the southeastern edge of the 1375 Building.
- New oil ASTs are located in two dedicated areas within the 1375 Building.
- Hazardous waste (i.e., used oil, used oil filters, waste paint, and antifreeze) is containerized into an AST or drums that are stored on secondary containment along the eastern wall. Hazardous waste areas include a 2,000-gallon waste oil AST located in the parking lot; seven (7) 55-gallon drums of waste paper and metal used oil filters located along the northeastern edge of the building two (2) used antifreeze totes located along the northeastern edge of the building near the body shop, four (4) 55-gallon drums of paint waste located adjacent to the spray paint booth area, eight (8) 55-gallon drums of waste automotive fluids (waste fuel, waste brake fluid, etc.) located adjacent to the "rim shop" area and smaller satellite accumulation areas located near the point of use.

[2] Only major, designated storage locations included. Other storage takes place on an *ad hoc* basis near points of use/generation throughout the facility. Additionally, retail-sized containers of household-type maintenance or cleaning chemicals and cylinders of compressed gases are also stored at the site; the storage of these materials is not expected to pose a significant contamination concern.

- Nonhazardous wastes are collected in dumpsters (general trash) that are positioned on pavement along the northeastern edge of the building paved parking lot and within the body shop area. Cardboard trash and scrap metal are collected in dumpsters located within the body shop until transported off-site for recycling.

One full, unlabeled, 55-gallon drum of unknown contents was observed within the automobile wash area on top of a wooden pallet. Facility personnel were unaware of the contents. No releases were observed from the drum.

Facility personnel knew of no spills or releases of materials at drum and container storage areas. While dedicated secondary containment was not provided for all of the drums and containers, Ramboll did not observe evidence of major spills or uncontrolled releases from these storage areas.

5.2.2 Aboveground Storage Tanks

Several aboveground storage tanks (ASTs) are maintained at the site, as summarized in the table below. Facility personnel knew of no leaks or spills relating to the tanks, and Ramboll did not observe evidence of major staining or past releases at the time of the site visit.

Table 7: Aboveground Chemical and Petroleum Storage Tanks and Bulk Containers

Location	# of tanks	Contents	Sizes	Observations
Southeast of the 1375 Building in the parking lot	1	Gasoline	2,000-gallons	Tank is double walled with a containment berm around the tank. No evidence of spills or releases observed.
Northeast corner parking lot of the 1375 Building	1	Used oil	2,000-gallons	Tank is double walled with a containment berm around the tank. No evidence of spills or releases observed.
Northern wall of the 1375 Building	5	New engine oil	250-1,000 gallons	Tanks are double walled. Evidence of minor spills or releases was observed.
Central portion of the 1375 Building	5	New engine oil	150-500 gallons	Tanks are double walled. Piping from the tanks is attached to the wall and connected to a dispenser. The dispenser is located over secondary containment. No evidence of spills or releases observed.
Northeastern edge of the 1375 Building	2	Used antifreeze	150-gallon totes	Totes are located within secondary containment. Minor spills were observed.

Table 7: Aboveground Chemical and Petroleum Storage Tanks and Bulk Containers

Location	# of tanks	Contents	Sizes	Observations
Automobile wash area in the southern portion of the 1375 Building	1	De-ionized water	500-gallon	Tank is used in association with automobile wash activities. No evidence of spills or releases observed.

5.2.3 Polychlorinated Biphenyls (PCBs)

Facility personnel knew of no on-site equipment that is known to contain PCBs. Two pad-mounted transformers are present on the site (one on each parcel). The units were not labeled as to their PCB content. Ramboll saw no indication of major leaks or releases from electrical equipment observed during the site visit.

Because the units were likely installed at the time of the site development in 1987 and 1998, after the 1979 federal ban on the manufacture of PCBs, it is unlikely that the units contain PCBs.

5.2.4 Pits, Ponds, and Lagoons

As previously discussed, within the 1375 Building, floor wash water and automobile wash water are discharged to a trench drain and into a three-stage clarifier before it is discharged to the sanitary sewer. A third-party service cleans out the clarifier on an as-needed basis. Other than drainage swales, which are located on the eastern, western, and southern sides of the site, and the clarifier, no natural or man-made surface water bodies were observed on the site.

5.2.5 Interior and Exterior Staining

Ramboll observed moderate floor staining throughout the service repair area and adjacent to the hazardous waste storage areas. This staining did not appear to be indicative of widespread releases or losses. Concrete floors in the vicinity of the staining appeared to be in good condition, with no evidence of cracking. In addition, Ramboll observed evidence of minor pavement staining in the paved parking areas located at both parcels at the site; facility personnel believe the staining likely resulted from minor drips from employee or customer vehicles parked in these areas. Pavement in the vicinity of the observed staining appeared to be in good condition, with no evidence of cracking.

5.2.6 Asbestos Containing Materials (ACMs)

An asbestos inspection and sampling of suspect building materials in conformance with established protocols (as outlined in 40 CFR §763), applicable state or local regulations, or industry standards, were beyond our scope of work. OSHA's definition of presumed asbestos containing materials (PACMs) is limited to thermal system insulation (TSI) and surfacing materials present in buildings constructed before 1981. Vinyl floor tiles are not considered PACM, but OSHA nonetheless requires that asphalt and vinyl floor tiles present in buildings constructed before 1981 be treated similarly to PACM. The term suspect ACM is not defined by OSHA but can include numerous building materials manufactured using asbestos currently or in the past (e.g., ceiling tiles, roofing materials, joint compound), as well as TSI, surfacing materials, and flooring materials installed after 1981.

According to facility personnel, a comprehensive asbestos survey has not been conducted at the facility.

The buildings at the site were not constructed prior to 1981; thus, none of the building materials at the site are considered PACM. Asbestos has continued to be used in some building materials since that time, although it was phased out of use in many building materials during the 1980s. Facility personnel knew of no ACMs within the buildings and a comprehensive asbestos survey has not been conducted. Although the possibility that asbestos is present in the building materials cannot be ruled out, the facility is unlikely to have significant quantities of ACMs.

There are no regulatory requirements to remove PACMs, suspect ACMs and known ACMs or to confirm whether building materials contain asbestos, unless the materials are damaged and have the potential to release fibers or the materials have the potential to be disturbed during renovation or demolition activities. OSHA requires building owners and employers to identify locations of PACM and confirmed ACM at the facility and comply with certain employee notification, training, labeling and recordkeeping requirements (29 CFR §1910.1001(j)) and housekeeping programs (1910.1001(k)). Prior to any renovation or demolition of the buildings at the site, a demolition-level asbestos survey should be conducted at the site.

5.2.7 Lead-Based Paint

Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction dates of the buildings in the 1987 and 1998, it is unlikely that lead-based paint was used historically on facility structures. Facility personnel knew of no lead-based paint on structures at the facility. Ramboll observed the paint to be in generally good condition.

5.2.8 Water Intrusion

Ramboll did not perform a mold survey at the site; however, facility personnel provided information regarding past water intrusion events. According to facility personnel, the site has not experienced significant water intrusion events.

5.2.9 Radon

Based on information included in the environmental database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per liter (pCi/L). The United States Environmental Protection Agency's (USEPA's) continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, of 7 radon test results in the same zip code as the site, none were greater than 4 pCi/L. The median first floor radon value for 18 sites surveyed in San Bernardino County was 0.678 pCi/L.

6. FINDINGS, OPINION, AND CONCLUSIONS

Ramboll performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the property located at 1350 and 1375 South Woodruff Way in Ontario, California in October 2021. The objective of the ESA was to identify RECs, as defined in the ASTM Standard. A list of key definitions presented in the ASTM Standard is provided in Chapter 7 at the end of this report. Any exceptions to, or deletions from, this practice are described in Section 6.2.

6.1 Findings, Opinions, and Conclusions

6.1.1 Recognized Environmental Conditions

Ramboll has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the property located at 1350 and 1375 South Woodruff Way in Ontario, California. Any exceptions to, or deletions from, this practice are described in Section 6.2 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property.

6.1.2 Other Findings

The following additional findings related to potential contamination concerns were identified:

- **Past Industrial/Commercial Operations at the Site.** Elixir Industries occupied the eastern portion of the site from 1987 to 1992, but no detailed information is readily available in historical documents regarding Elixir Industries' operations on-site. There is no readily available information as to the specific use of chemicals or petroleum products during this time period, but there is no indication that these operations were chemically intensive or involved the use of significant amounts of petroleum products or other hazardous substances. In addition, the site has operated as an auto dealer, auto servicing, and auto body shop including a paint booth since 1992. These operations have involved the use of petroleum products, solvents, paints, and other chemicals. Since 1992, one below-grade feature (e.g., clarifier in the car wash area) has been used on-site that represents a potential conduit for chemicals and petroleum products to reach the subsurface. Because Ramboll's review did not identify documentation of a release, a suspected release, or a potentially material threat of a release of a hazardous substance or petroleum product related to this matter, it is not considered a REC; however, absent further information regarding the specific nature of historical chemical use, chemical handling practices, and associated wastes, Ramboll cannot rule out the possibility that inadvertent spills or releases of chemicals or petroleum products may have occurred in the past.
- **Past Use of Site for Agricultural Orchards.** The site was previously used for agricultural purposes, including for vineyards/orchards, from at least 1939 until the 1980s. Past orchard operations may have involved the application of arsenical and lead-based pesticides commonly used on orchards in the first half of the 20th century, or other organic pesticides commonly used on orchards thereafter. Facility personnel reported no knowledge of past subsurface testing for any pesticides. Because Ramboll's review did not identify documentation of a release, a suspected release, or a potentially material threat of a release of a hazardous substance or petroleum product related to this matter, it is not considered a REC; however, absent further information, the potential presence of these compounds in the site subsurface cannot be ruled out. Ramboll notes that this matter is unlikely to result in regulatory scrutiny, assuming no changes to site use for commercial purposes. Ramboll further notes that the use of such substances in this region (which is and has been historically widely used for fruit production) would have been fairly widespread and ubiquitous.

6.1.3 *De Minimis* Conditions

De minimis conditions are those that do not represent a material risk of harm to public health or the environment and that generally would not be the subject of enforcement action if brought to the attention of appropriate governmental agencies. Ramboll identified the following *de minimis* condition related to the site:

- **Pavement and Floor Staining.** Moderate staining was observed on the concrete floor in the service center at the 1375 Building. Specifically, moderate staining was observed adjacent to the secondary containment around the used antifreeze totes, around the new oil ASTs and 35-gallon rear axle lubricant drums, used filters, non-chlorinated parts washer, air compressor room, and spray paint booth paint mixing area. The staining appeared limited in size and did not appear to reach floor drains.

  In addition, Ramboll observed evidence of minor pavement staining in the surface paved parking areas; facility personnel believe the staining likely resulted from minor drips from employee vehicles parked in these areas.

  The stains were limited in areal extent, the underlying pavement/flooring appeared to be intact, and no stains appeared to reach floor drains or storm water drains. As such, Ramboll considers this matter to represent a *de minimis* condition.

6.1.4 Non-Scope Considerations

Ramboll identified the following findings that relate to non-scope considerations (as discussed in Section 2.2), as detailed below:

- **Asbestos-Containing Materials (ACMs).** The buildings were constructed after asbestos was generally phased out of use in most building material applications in the 1980s. Although the possibility that asbestos is present in the building materials cannot be ruled out, the facility is unlikely to have significant quantities of ACMs. According to facility personnel, formal asbestos survey has not been conducted at the facility.
- **Water Intrusion/Mold.** Ramboll did not perform a mold survey at the site; however, facility personnel provided information regarding past water intrusion events. According to facility personnel, the site has not experience significant water intrusion events.
- **Lead.** Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction dates of the buildings in the 1987 and 1998, it is unlikely that lead-based paint was used historically on facility structures. Facility personnel knew of no lead-based paint on structures at the facility. Ramboll observed the paint to be in generally good condition.
- **Radon.** Based on information included in the environmental database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per liter (pCi/L). The United States Environmental Protection Agency's (USEPA's) continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, of seven radon test results in the same zip code as the site, none were greater than 4 pCi/L. The median first floor radon value for 18 sites surveyed in San Bernardino County was 0.678 pCi/L.

6.2 Analysis of Data Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information." A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps.

Limiting conditions and deviations to the ASTM Standard for the assessment are discussed below.

- Facility personnel did not have current contact information for representatives of former site owners/occupants. Ramboll made reasonable attempts to obtain such information, but it was not otherwise readily available. Thus, Ramboll was unable to interview former owners/occupants about historical operations and site conditions. However, Ramboll conducted interviews with representatives of Citrus Motors with tenure at the site dating back to 2002 and reviewed other historical sources regarding former uses of the property.
- Historical information, such as aerial photographs, was not readily available to characterize the property from the present back to the property's obvious first developed use or 1940, whichever is earlier. The earliest readily available historical source that would indicate specific site uses is an aerial photograph dated 1938, which shows that the site was already developed for agricultural uses. ASTM defines agricultural site use as a "developed" site use.
- Ramboll was unable to access the "rim shop" area during the site visit. Facility personnel indicated that chemical use within the rim shop accessory area was retail-sized quantities or smaller.

None of the exceptions, deletions, deviations, or site reconnaissance limitations noted above are considered to represent significant data gaps.

7. ASTM DEFINITIONS

The following definitions are presented in the ASTM Standard:

REC - Recognized Environmental Condition:

The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment.

CREC - Controlled Recognized Environmental Condition:

A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

HREC - Historical Recognized Environmental Condition:

A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

***De minimis* Condition:**

A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Data Gap/Significant Data Gap:

A lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information. A data gap is significant if other information and/or professional experience raises concerns involving the data gap.

Please note that the term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

APPENDIX B
ENVIRONMENTAL DATABASE REPORT

NOTES ON ENVIRONMENTAL DATABASE REPORT

The third-party provider conducted its searches for the standard environmental record sources and the minimum search distances, as specified by the ASTM Standard. The ASTM Standard uses the terminology "approximate minimum search distance" to refer to the radii searched in the environmental database report.

The third-party provider conducted the search of environmental databases in September 2021. Because the environmental databases themselves are sometimes not updated by the specific regulatory agencies for periods of up to one year or more (depending on the database and the state), the database search conducted herein will not necessarily list any facility or site for which an environmental investigation/listing has been initiated subsequent to the last update.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/22/2021 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 9 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/23/2021 has revealed that there is 1 ENVIROSTOR site within approximately 1 mile of the target property.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2019 has revealed that there is 1 HAZNET site within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR

researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.25 miles of the target property.

CITRUS MOTORS ONTARIO INC (Continued) **1007739294**

Site ID:	105794
Site Name:	CITRUS MOTORS ONTARIO INC
Violation Date:	09-10-2019
Citation:	HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description:	Failure to comply with one or more of the following requirements: 1. Have record of inspections and tests, including integrity tests, signed by the appropriate supervisor or inspector. 2. Keep written procedures and records of inspections and tests, including integrity tests, for at least three years. 3. Keep comparison records.
Violation Notes:	Returned to compliance on 10/01/2019. OBSERVATION: Records of the spill prevention and tank inspections as called out by the SPCC plan were not available for review. This is a different inspection than the daily hazardous waste tank inspection. CORRECTIVE ACTION: Submit a signed statement indicating the tank inspections per the SPCC plan are being conducted.
Violation Division:	San Bernardino County Fire Department
Violation Program:	APSA
Violation Source:	CERS

Site ID:	105794
Site Name:	CITRUS MOTORS ONTARIO INC
Violation Date:	09-10-2019
Citation:	HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description:	Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes:	Returned to compliance on 09/10/2019. OBSERVATION: Records for the hazardous materials, SPCC plan, hazardous waste and PPE training topics were not available for review. CORRECTIVE ACTION: Submit a signed statement indicating that initial and annual training is conducted and that training records are maintained for a minimum of three years.
Violation Division:	San Bernardino County Fire Department
Violation Program:	HMRRP
Violation Source:	CERS

Site ID:	105794
Site Name:	CITRUS MOTORS ONTARIO INC
Violation Date:	09-13-2016
Citation:	HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Description:	Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.
Violation Notes:	Returned to compliance on 12/22/2016. Hazardous materials above reportable threshold missing from CERS hazardous materials inventory.
Violation Division:	San Bernardino County Fire Department
Violation Program:	HMRRP
Violation Source:	CERS

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violation Notes: Returned to compliance on 03/05/2018. Hazardous waste accumulation

WEBBER EMI (Continued) **S105697979**

time exceeded (CCR 66262.34(a)) The site has a 55 gallon drum of waste oil that appears to be full. The accumulation time limit on this waste has been exceeded. It is recommended that after the waste is removed that used oil be collected in closeable and properly labeled 5 gallon container. The used oil accumulated from the service of the compressor can be taken to a certified used oil collection center. (Auto zone, Pep boys) If you opt to collect and dispose of the waste oil in this manner keep a log showing the date and quantity of used oil taken to the disposal center.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 09/24/2020. OBSERVATION: The accumulation time limit for the waste oil has been exceeded. CORRECTIVE ACTION: Have the waste oil removed by a licensed hazardous waste hauler and submit to this office a copy of the hazardous waste manifest.
Violation Division:	San Bernardino County Fire Department
Violation Program:	HW
Violation Source:	CERS

UNIVERSAL PLASTIC BAG MFG CO. (Continued) **S116676324**

6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 12/02/2020. OBSERVATION: The hazardous materials inventory submitted in CERS was incomplete. The maximum daily amount listed in CERS for each inventory item needs to be updated to reflect the most on site at any one time. The facility has four 40,000 pound silos plus approximately forty five 1200 pound gaylord totes of resins. The inventory also needs to be updated to include the 30 gallon waste oil drum and the 55 gallon ammonium hydroxide drums. CORRECTIVE ACTION: Submit an accurate and complete hazardous materials inventory via CERS.

Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665
Violation Description: Failure to comply with one or more of the following: Failure to install or maintain a liquid-tight spill bucket. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill bucket/spill container. Be resistant to galvanic corrosion.
Violation Notes: Returned to compliance on 03/22/2018. 03/22/18: CLOSE OUT VIOLATION PER E. GRIMES-PREYES OBSERVATION: THE 87 SIPHON OVERSPILL BUCKET FAILED TO MAINTAIN LIQUID WHEN TESTED. REQUIREMENT: WITHIN 10 DAYS, REPAIR OR REPLACE THE FAILED BUCKET WITH LIKE-FOR-LIKE EQUIPMENT. UPON COMPLETION, SUBMIT A COPY OF THE WORK ORDER DOCUMENTING THE REPAIR AND RETEST WITH A COPY OF THE SIGNED CERTIFICATE OF COMPLIANCE TO JKOOYMAN@SBCFIRE.ORG TO CLEAR THE VIOLATION. FAILURE TO SUBMIT THE REQUIRED DOCUMENTATION WILL REQUIRE A SCHEDULED WITNESSED RETEST.

AUTO CHARGERS (Continued) **S105697866**

Violation Source: CERS

Site ID: 9535
Site Name: AUTO CHARGERS
Violation Date: 03-23-2016
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665
Violation Description: Failure of the overfill prevention system to meet one of the following requirements: 1. Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.
Violation Notes: Returned to compliance on 03/23/2016. OBSERVATION: The light bulb in the external over fill alarm failed when tested. COMPLIANCE MET ON SITE: Technician replaced and re-tested alarm- passed

Violation Date: 03-22-2018
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Description: Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.
Violation Notes: OBSERVATION: THE EPA ID NUMBER, CAL000341666, WAS FOUND TO BE INACTIVE SINCE 6/30/2015. FACILITIES STORING HAZARDOUS WASTE MUST MAINTAIN AN ACTIVE EPA ID NUMBER AND IT IS REQUIRED FOR HAULERS TO LEGALLY HAUL THE FACILITIES WASTE. CORRECTIVE ACTION: OBTAIN AN ACTIVE EPA ID AND PROVIDE PROOF TO OUR DEPARTMENT. SCHEDULE A HAZARDOUS WASTE PICKUP FROM AN APPROVED HAULER AND PROVIDE A COPY OF THE MANIFEST TO OUR DEPARTMENT. THESE ACTIONS MUST BE COMPLETED BY THE SET COMPLIANCE DATE OF 4/21/2018. CORRECTIVE ACTION

Site Name: AUTO CHARGERS
Violation Date: 03-22-2018
Citation: 23 CCR 16 2712 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712
Violation Description: Failure to comply with any of the applicable requirements of the permit issued for the operation of the UST system.
Violation Notes: Returned to compliance on 03/22/2018. OBSERVATION: THE 91, 87 MAIN AND 87 AUXILLARY FILL SUMPS HAD WATER INSIDE. THE AMOUNT WAS NOT ENOUGH TO TRIGGER THE ALARMS. HOWEVER, THE SAME ISSUE WAS NOTED ON THE LAST MONITORING CERTIFICATION REPORT FOR ALL FILL SUMPS. THE TESTING COMPANY REMOVED THE WATER. CORRECTIVE ACTION: EVEN THOUGH WATER WAS REMOVED, THERE APPEARS TO BE AN ISSUE WITH WATER INTRUSION. THERE WERE NO VISIBLE ISSUES WITH GASKETS OR BOLTS. THE CURRENT MATS BEING USED ARE NOT INTENDED TO KEEP WATER FROM ENTERING, THEY ARE BASIC FLOOR MATS. THERE ARE SPECIAL THICK RUBBER MATS THAT ARE MADE FOR TANK TOPS AND WILL ASSIST IN PREVENTING EASY WATER INTRUSION. INVESTIGATE THIS OPTION AND OTHERS IN ORDER TO RESOLVE THIS MATTER. INFORM OUR DEPARTMENT OF YOUR ROUTE BY THE COMPLIANCE DATE SET.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART)

ARCO FACILITY NO 05965 (Continued) **1004677997**

provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violations:

Site ID:	416746
Site Name:	Coram CVS/specialty Infusion Services #48084
Violation Date:	03-03-2020
Citation:	22 CCR 12 66262.42 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.42
Violation Description:	Failure to complete the Uniform Hazardous Waste Manifest exception requirements.
Violation Notes:	Returned to compliance on 04/02/2020. Observation: Copies of the hazardous waste manifests from the treatment/disposal site were not available for review. The generator failed to determine the status of a uniform hazardous waste manifested shipment within 35 days from the date the waste was shipped. CORRECTIVE ACTION: Submit documentation demonstrating you have determined the status of the hazardous waste manifests generated from this facility for 2019 and 2020. This would be a copy of a signed manifest from the disposal site.
Violation Division:	San Bernardino County Fire Department
Violation Program:	HWLQG
Violation Source:	CERS

Site ID:	416746
Site Name:	Coram CVS/specialty Infusion Services #48084
Violation Date:	03-03-2020
Citation:	22 CCR 12 66262.23(a)(4) - California Code of Regulations, Title 22,

CORAM HEALTHCARE CORPORATION OF SOUTHERN CALIFORNIA (Continued) **S113138071**

	Chapter 12, Section(s) 66262.23(a)(4)
Violation Description:	Failure to send a legible copy of each hazardous waste manifest to the Department within 30 days of each shipment of hazardous waste.
Violation Notes:	Returned to compliance on 04/02/2020. OBSERVATION: The generator has not sent a legible copy of each Uniform Hazardous Waste Manifest to the DTSC within 30 days of shipment. DTSC Generator Manifests P.O. Box 400 Sacramento, CA 95812-0400 CORRECTIVE ACTION: Submit a copy of all hazardous waste manifests to the DTSC for years 2018 and 2019. Submit a statement demonstrating compliance with this requirement.
Violation Division:	San Bernardino County Fire Department
Violation Program:	HWLQG
Violation Source:	CERS
Site ID:	416746
Site Name:	Coram CVS/specialty Infusion Services #48084
Violation Date:	03-03-2020
Citation:	HSC 6.11 25404(e)(4) - California Health and Safety Code, Chapter 6.11, Section(s) 25404(e)(4)
Violation Description:	Failure to report program data electronically.
Violation Notes:	Returned to compliance on 04/02/2020. Observation: The site failed to update the CERS business plan within 30 days of a change. The contact information for the site was incorrect. The site map was no longer current. The hazardous waste storage area is not where it is shown on the site map and the hazardous materials inventory was not reflective of what was found on site. CORRECTIVE ACTION: Submit the updated business plan information via CERS.
Violation Division:	San Bernardino County Fire Department
Violation Program:	HWLQG
Violation Source:	CERS
Site ID:	416746
Site Name:	Coram CVS/specialty Infusion Services #48084
Violation Date:	03-03-2020
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 03/03/2020. OBSERVATION: The four hazardous waste containers did not have hazardous waste labeling. All containers are required to be labeled at the start of accumulation in each container. CORRECTIVE ACTION: Submit a signed certificate of compliance to indicate compliance with this requirement. The containers were also labeled during the inspection.
Violation Division:	San Bernardino County Fire Department
Violation Program:	HWLQG

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

EMPIRE NISSAN INC (Continued) **1000595502**

TSD EPA ID: CAL000330453
CA Waste Code: 352 - Other organic solids
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.27500

Year: 2019
Gepaid: CAD983594490
TSD EPA ID: AZD081705402
CA Waste Code: 181 - Other inorganic solid waste
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.30000

Year: 2019
Gepaid: CAD983594490
TSD EPA ID: CAL000330453
CA Waste Code: 352 - Other organic solids
Disposal Method: -
Tons: 1.40000

Year: 2018
Gepaid: CAD983594490
TSD EPA ID: CAL000330453
CA Waste Code: 352 - Other organic solids
Disposal Method: H010 - Metals Recovery Including Retoring,Smelting,Chemicals,Ect
Tons: 4.47500

Year: 2018
Gepaid: CAD983594490
TSD EPA ID: AZD081705402
CA Waste Code: 181 - Other inorganic solid waste
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.27500

Year: 2017
Gepaid: CAD983594490
TSD EPA ID: NED981723513
CA Waste Code: 223 - Unspecified oil-containing waste
Disposal Method: H040 - Incineration--Thermal Destruction Other Than Use As A Fuel
Tons: 0.15

Year: 2017
Gepaid: CAD983594490
TSD EPA ID: CAT000613927
CA Waste Code: 134 - Aqueous solution with total organic residues less than 10 percent
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.168

Year: 2017
Gepaid: CAD983594490
TSD EPA ID: CAL000330453
CA Waste Code: 352 - Other organic solids
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No

EMPIRE NISSAN INC (Continued) **1000595502**

Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.175

Year: 2017
Gepaid: CAD983594490
TSD EPA ID: CAL000330453
CA Waste Code: 352 - Other organic solids
Disposal Method: H010 - Metals Recovery Including Retoring,Smelting,Chemicals,Ect
Tons: 2.525

Citation:	HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Description:	Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or

ALEXIS OIL CO (Continued) **S125534345**

	business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.
Violation Notes:	Returned to compliance on 01/19/2017. The following hazardous material and hazardous waste were not disclosed on the Business Plan: (8) 55 gallon drums for drained used oil filters and 55 gallons of parts cleaner
Violation Division:	San Bernardino County Fire Department
Violation Program:	HMRRP
Violation Source:	CERS
Site ID:	114466
Site Name:	Empire Nissan
Violation Date:	11-09-2016

Violation Date:	11-09-2016
Citation:	HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description:	Failure to discuss in the SPCC Plan procedures to test or inspect each aboveground container for integrity in accordance with industry standards: 1. On a regular schedule. 2. After material repairs are made. 3. By qualified personnel. 4. The frequency and type of testing and inspections based on container size, configuration, and design.
Violation Notes:	Returned to compliance on 01/26/2017. There is no industry standard stated in the SPCC Plan for integrity testing conducted at the facility. The SPCC Plan states there will be a monthly formal visual inspection conducted by the Responsible Person or his designee and every 5 years each AST is inspected by a qualified independent tank inspection and testing service. An example of an industry standard is STI SP001. Compliance Requirement: Update the SPCC Plan to include

ALEXIS OIL CO (Continued) **S125534345**

integrity testing conducted in accordance with an industry standard. Submit a signed statement that the SPCC Plan has been updated.
Violation Division: San Bernardino County Fire Department

Site ID: 114466
Site Name: Empire Nissan
Violation Date: 01-30-2020
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to ensure that tanks are inspected and tested by an appropriately qualified person in accordance with industry standards.
Violation Notes: Returned to compliance on 02/07/2020. OBSERVATION: Per SPCC Plan, the facility conducts monthly and annual inspections in accordance with STI SP001. At the time of the inspection, monthly inspections of ASTs had been conducted; however, annual inspections had not been conducted. In addition, the insterstitial space for all double wall ASTs at the facility has not been inspected on a monthly and annual basis as required. CORRECTIVE ACTION: Conduct inspections and testing in accordance to industry standards. Ensure all components of the STI SP001, including interstitial space, are covered during the monthly and annual inspections. Submit a signed statement indicating that tanks are inspected and tested by qualified personnel as required. Provide a copy of the annual AST inspection. Maintain inspection records for a minimum of three years.

Violation Date: 01-30-2020
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: "Failure to prepare an SPCC Plan which fulfills all basic requirements that include: 1. The SPCC Plan must be prepared in accordance with good engineering practices. 2. Have full approval of management at a level of authority to commit the necessary resources to fully implement the SPCC Plan. 3. Prepare the SPCC Plan in writing. 4. Follow the sequence of the SPCC rule or include a cross-reference. 5. If the SPCC Plan calls for additional procedures, methods, or equipment not yet fully operational, discuss the items in separate paragraphs."
Violation Notes: Returned to compliance on 01/30/2020. OBSERVATION: At the time of the inspection, the management approval section of the SPCC Plan had not been completed. CORRECTED ON SITE: Mr. Farris signed and completed the management approval section of the SPCC Plan at the time of the inspection.

Violations:

Site ID:	404201
Site Name:	TOYOTA MOTOR SALES - PARTS
Violation Date:	06-09-2020
Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 06/22/2020. OBSERVATION: At time of inspection, observed accumulation start date of 11-5-2019 on (1) 10 gallon drum of used oil. Accumulation time of 180 days has been exceeded. CORRECTIVE ACTION: Dispose of hazardous waste that has been stored over the applicable time limit and provide documentation that the violation has been corrected.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

COMPUMERIC (Continued) **S108202993**

Site Name:	COMPUMERIC
Violation Date:	06-22-2016
Citation:	HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Description:	Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.
Violation Notes:	Returned to compliance on 07/20/2016. Observed higher quantities of Argon/CO2 compressed gas than previously disclosed.
Violation Division:	San Bernardino County Fire Department
Violation Program:	HMRRP
Violation Source:	CERS
Site ID:	21239
Site Name:	COMPUMERIC
Violation Date:	06-22-2016
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.
Violation Notes:	Returned to compliance on 07/20/2016. Business plan was last reviewed February 4th, 2015
Violation Division:	San Bernardino County Fire Department
Violation Program:	HMRRP
Violation Source:	CERS
Site ID:	21239
Site Name:	COMPUMERIC
Violation Date:	06-11-2019
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes:	Returned to compliance on 06/13/2019. OBSERVATION: Inventory provided on the California Environmental Reporting System (CERS) was inconsistent with inventory observed on site at time of inspection. (2) 55-gallon empty drums were not observed at time of inspection and (6) 244-cfu cylinders of Oxygen were observed at time of inspection. Quantity values for the following items were inconsistent with CERS submittal; Argon, Waste Oil, and Nitrogen Gas. CORRECTIVE ACTION: Using CERS add and remove inventory items respectively. Update quantity values for the following items; Nitrogen Gas, Waste Oil, and Argon. Please reference the inventory provided on this report. Fulfill the mentioned request within 30 days of this inspection. Once changes have been made, sign the Certificate of Compliance (CofC) located at the end of this report. Submit the completed certificate to this Division. Your CERS ID #10048117.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violations:

Site ID:	40290
Site Name:	JOHN ELWAY'S CROWN TOYOTA
Violation Date:	08-16-2018
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes:	Returned to compliance on 09/18/2018. OBSERVATION: Used oil filters, brake fluid waste and universal waste aerosols were found on site that were not listed on the CERS inventory. Hazardous waste is disclosable in any quantity. The quantity of brake cleaner also needs to be updated to reflect the five 55 gallon drums observed. CORRECTIVE ACTION: Submit an accurate and complete hazardous materials inventory into the California Environmental Reporting System (CERS).
Violation Division:	San Bernardino County Fire Department
Violation Program:	HMRRP
Violation Source:	CERS

Violation Date: 08-16-2018
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to ensure drainage from diked storage areas is restrained by valves, except where facility systems are designed to control such discharge, or failure to ensure manually activated pumps or ejectors are used and the condition of the accumulation is inspected prior to draining dike.
Violation Notes: Returned to compliance on 09/18/2018. The drain valve on the used oil tank located on the south side of the east service department building was found broken in an open position. CORRECTIVE ACTION: Replace the valve and ensure that all valves to containment basins are kept closed. Submit a photograph showing the repair.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/25/2021

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

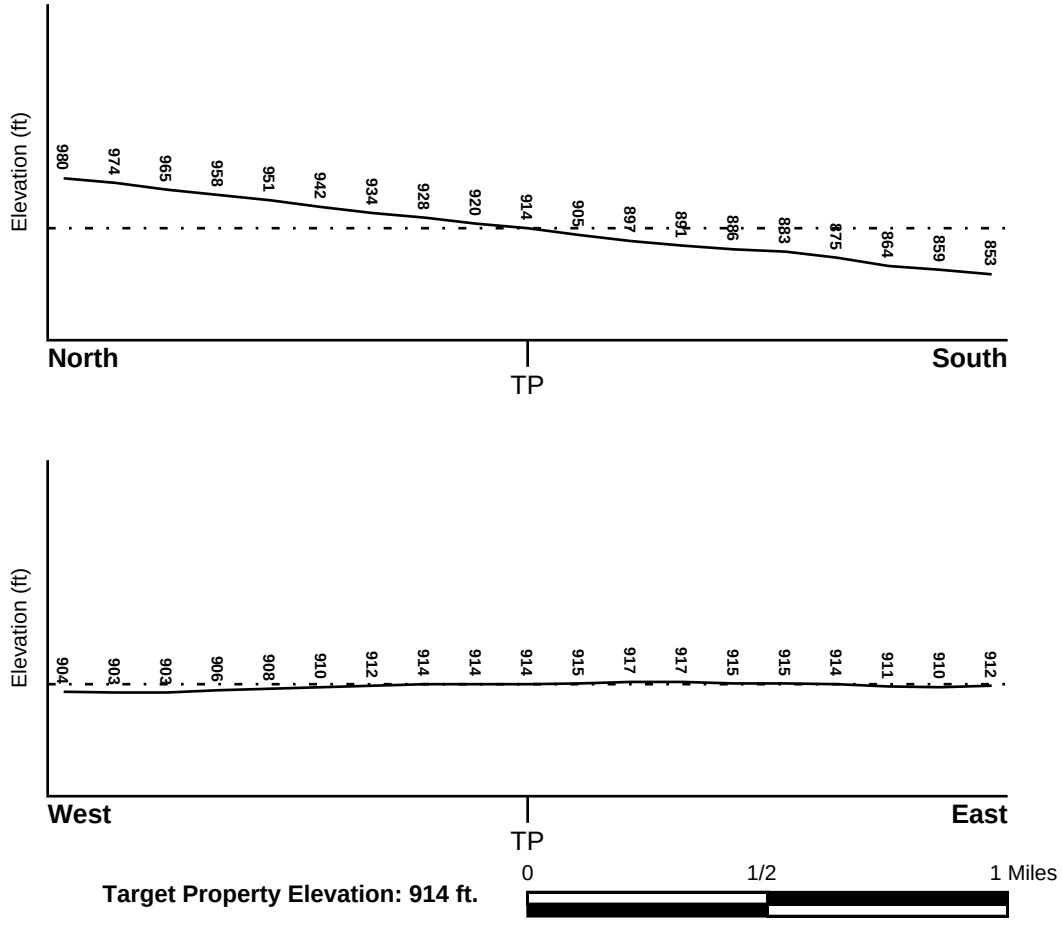
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06071C8641H	FEMA FIRM Flood data

06071C8633H	FEMA FIRM Flood data
06071C8637H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
GUASTI	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: DELHI

Soil Surface Texture: fine sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	18 inches	fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1
2	18 inches	59 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

PHYSICAL SETTING SOURCE RECORDS SEARCHED

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

Vancouver, WA 98660
Contact: Clarissa Krohe

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Ramboll were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ramboll were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Partner Project No. 20-276036.1
Client Reference No. 20-000123-02-1

Dear Ms. Helems:

Partner Engineering and Science, Inc. (Partner) is pleased to provide the results of the *Phase I Environmental Site Assessment* (Phase I ESA) report of the abovementioned address (the "subject property"). This assessment was performed in conformance with the scope and limitations as detailed in the ASTM Practice E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

This assessment included a site reconnaissance as well as research and interviews with representatives of the public, property ownership, site manager, and regulatory agencies. An assessment was made, conclusions stated, and recommendations outlined.

We appreciate the opportunity to provide environmental services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at 415-992-3755.

Sincerely,

Jay Grenfell
National Client Manager

EXECUTIVE SUMMARY

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in accordance with the scope of work and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and set forth by Mechanics Bank for the property located at 1375 South Woodruff Way in Ontario, San Bernardino County, California (the "subject property"). The Phase I Environmental Site Assessment is designed to provide Mechanics Bank with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

Property Description

The subject property is located on the northeast corner of the intersection of South Woodruff Way and Jurupa Street within a mixed commercial and light industrial area of San Bernardino County. Please refer to the table below for further description of the subject property:

Subject Property Data	
Address:	1375 South Woodruff Way, Ontario, California
Property Use:	Commercial and Light Industrial
Land Acreage:	10.6 Acres
Number of Buildings:	One
Number of Floors:	One
Gross Building Area:	149,600 Square feet
Date of Construction:	1988
Assessor's Parcel Number (APN):	0238-221-22-0000
Type of Construction:	Concrete Tilt-Up
Current Tenants:	Citrus Ford – automotive sales, service and repair operations
Site Assessment Performed By:	Tatjana McCondichie of Partner
Site Assessment Conducted On:	March 5, 2020

The subject property is currently occupied by Citrus Ford and utilized for automotive sales, service and repair operations. Onsite operations involve the use of new and used oil, gasoline, and various other new and used automotive lubes stored in aboveground storage tanks and 55-gallon drums. Additionally, the subject property is equipped with two spray paint booths. In addition to the current structure, the subject property is also improved with asphalt-paved parking areas and drives.

According to available historical sources, the subject property was formerly developed agriculturally from at least 1938 until 1975; was vacant in at least 1985; and was developed with the current structure in 1988. Since construction the subject property has been occupied by Citrus Ford and utilized for automotive sales, service and repair operations.

The immediately surrounding properties consist of S&W Plastic Inc. and a multi-tenant light industrial warehouse structure to the north across Wanamaker Avenue; Toyota North America Parts Center to the south across East Jurupa Street; Maney Aircraft Inc and Universal Plastic Bag Mfg Co to the east; and Carl's Jr and Citrus Kia to the west across South Woodruff Way.

According to the Regional Water Quality Control Board, groundwater in the vicinity of the subject property is expected to be encountered approximately over 250 feet below ground surface (bgs) and flow toward the south.

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property; due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Partner did not identify recognized environmental conditions during the course of this assessment.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify controlled recognized environmental conditions during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify historical recognized environmental conditions during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- Based on Partner's historical research, the subject property has been occupied by an automobile sale and repair facility since at 1988. Additionally, according to South Coast Air Quality Management District records, the subject property has been equipped with a 'spray-paint booth' since at least 1994. All of the facility's lifts are aboveground in nature and there were no drains observed of reported within the permitted spray paint booths and no records of underground features such as underground tanks or clarifiers were noted other than the clarifier that services the car wash only. Some administrative violations were noted during inspections; however, they all appear to have been subsequently brought into compliance. While the use and storage of hazardous substances represents an environmental issue, no further investigation appears warranted at this time.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 1375 South Woodruff Way in Ontario, San Bernardino County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property. Based on the conclusions of this assessment, Partner recommends no further investigation of the subject property at this time.

1.0 INTRODUCTION

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at 1375 South Woodruff Way in Ontario, San Bernardino County, California (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-13) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances. The information contained in the ESA Report will be used by Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout or seller financing; 2) evaluate the subject property's overall development potential, the associated market value and the impact of applicable laws that restrict financial and other types of assistance for the future development of the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout or seller financing of the subject property.

This ESA was performed to permit the *User* to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"). ASTM Standard E1527-13 constitutes "*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

1.2 Scope of Work

The scope of work for this ESA is in accordance with the requirements of ASTM Standard E1527-13. This assessment included: 1) a property and adjacent site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Partner contacted local agencies, such as environmental health departments, fire departments and building departments in order to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-13, AULs are the legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the subject

property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater on the property.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM include the following: ACMs, LBP, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 6.3.

1.4 User Reliance

Mechanics Bank engaged Partner to perform this assessment in accordance with an agreement governing the nature, scope and purpose of the work as well as other matters critical to the engagement. All reports, both verbal and written, are for the sole use and benefit of Mechanics Bank. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with Partner granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Partner, its

officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, Client and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such Use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

1.5 Limiting Conditions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past owners, operators and occupants were not reasonably ascertainable, which constitutes a data gap. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the conclusions of this assessment.
- Partner submitted Freedom of Information Act (FOIA) requests to San Bernardino County Fire Department for information pertaining to hazardous substances, underground storage tanks, releases, inspection records, etc. for the subject property. As of this writing, this agency has not responded to Partner's request. Based on information obtained from other historical sources, this limitation is not expected to alter the overall conclusions of this assessment.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The subject property at 1375 South Woodruff Way in Ontario, California is located on the northeast corner of the intersection of South Woodruff Way and Jurupa Street. According to the San Bernardino County Assessor, the subject property is legally described as *PARCEL MAP 9752 PARCEL 2*, and ownership is currently vested in Shannon, Dennis A and Janet C TRS.

Please refer to Figure 1: Site Location Map, Figure 2: Site Plan, Figure 3: Topographic Map, and Appendix A: Site Photographs for the location and site characteristics of the subject property.

2.2 Current Property Use

The subject property is currently occupied by Citrus Ford and utilized for automotive sales, service and repair operations. Onsite operations involve the use of new and used oil, gasoline, and various other new and used automotive lubes stored in aboveground storage tanks and 55-gallon drums. Additionally, the subject property is equipped with two spray paint booths. The subject property consists of one single-story building and parking areas.

The subject property is designated for commercial development by the City of Ontario.

The subject property was identified as an AST, CERS HAZ WASTE, CERS TANKS, FINDS, San Bern Co Permit, CERS, RCRA NonGen/NLR, FINDS, ECHO, HAZNET and HWTS site in the regulatory database report, which is further discussed in Section 4.2.

2.3 Current Use of Adjacent Properties

The subject property is located within a mixed commercial and light industrial area of San Bernardino County. During the vicinity reconnaissance, Partner observed the following land use on properties in the immediate vicinity of the subject property:

Immediately Surrounding Properties	
North:	Wanamaker Avenue beyond which is S&W Plastic Inc. (14270 Albers Way/1200 Wanamaker Ave) and a multi-tenant light industrial warehouse structure
South:	Jurupa Street beyond which is Toyota North America Parts Center (1425 Toyota Way)
East:	Maney Aircraft Inc (1305 Wanamaker Ave) and Universal Plastic Bag Mfg Co (1309 Wanamaker Ave)
West:	South Woodruff Way beyond which is Carl's Jr (4555 Jurupa St) and Citrus Kia (1350 S. Woodruff Way)

The adjacent properties were identified as a HAZNET, HWTS, RCRA NonGen/NLR FINDS, ECHO, CERS HAZ WASTE, CERS and San Bern Co Permit site in the regulatory database report, which is further discussed in Section 4.2.

2.4 Physical Setting Sources

2.4.1 Topography

The United States Geological Survey (USGS) *Guasti, California* Quadrangle 7.5-minute series topographic map was reviewed for this ESA. According to the contour lines on the topographic map, the subject

property is situated approximately 914 feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping moderately toward the south. No site-specific structures are depicted on the 2012 topographic map.

A copy of the 2012 topographic map is included as Figure 3 of this report.

2.4.2 Hydrology

The nearest surface water in the vicinity of the subject property is Lytle Creek located approximately 0.5 miles east of the subject property. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment.

According to available information, a public water system operated by the Ontario Water Utility Department serves the subject property vicinity. According to a representative of the OWUD, shallow groundwater beneath the subject property is not utilized for domestic purposes. The sources of public water for the City of Ontario are 24 groundwater public wells and the State Water Project.

According to the Regional Water Quality Control Board, groundwater in the vicinity of the subject property is expected to be encountered approximately over 250 feet below ground surface (bgs) and flow toward the south.

2.4.3 Geology/Soils

The subject property is located south of the San Gabriel Mountains in the San Gabriel groundwater basin, at an elevation of approximately 1,205 feet above mean sea level. The San Gabriel basin is a structural basin filled with Quaternary alluvial deposits comprised of eroded sand, gravel, and clay. The alluvium is the major aquifer in the basin and attains a maximum thickness of more than 4,000 feet. The regional hydrogeologic setting for the subject site is characterized by steeply to moderate sloping alluvial deposits which are coarser near their apex in the mountains and grade to finer deposits towards the ocean. Within the alluvial deposits are layers of sand and gravel, which may extend for some distance west, and which may serve as groundwater discharge areas. Near their source, the alluvial fans are underlain by, and in direct hydraulic contact with, older alluvial fans or lie directly upon consolidated fractured sedimentary, metamorphic, or igneous rock. Away from the mountains, these deposits consist of interbedded sand, silt, and clay with discontinuous lenses of coarser sand and gravel, which formed on a narrow coastal plain of moderate relief.

Based on information obtained from the United States Department of Agriculture (USDA) Natural Resources Conservation Service Web Soil Survey online database, the subject property is mapped as Delhi fine sand. The Delhi series consists of deep, well-drained to excessively well-drained sands and gravels with high infiltration rates.

2.4.4 Flood Zone Information

Partner performed a review of the Flood Insurance Rate Map, published by the Federal Emergency Management Agency. According to Community Panel Number 06071C8641J, dated September 2, 2016, the subject property appears to be located in Zone X, an area located outside of the 100-year and 500-year flood plains.

3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. A chronological listing of the historical data found is summarized in the table below:

Historical Use Information		
Period/Date	**Source**	**Description/Use**
1938-1975	Aerial Photographs, Topographic Maps	Orchard
1985	Aerial Photographs, Topographic Maps	Vacant
1989-Present	Aerial Photographs, Building Records, City Directories, Interviews, Onsite Observations	Commercial/Auto Sales and Service

Since construction the subject property has been occupied by Citrus Ford and utilized for automotive sales, service and repair operations.

3.1 Aerial Photograph Review

Partner obtained available aerial photographs of the subject property and surrounding area from Environmental Data Resources (EDR) on February 26, 2020. The following was observed on the subject property and adjacent properties during the aerial photograph review:

Date: 1938		*Scale: 1"=500'*
Subject Property:	Appears to be agriculturally developed	
North:	Appears to be agriculturally developed

Copies of reviewed aerial photographs are included in Appendix B of this report.

3.2 Fire Insurance Maps

Partner reviewed the collection of Sanborn Fire insurance maps from EDR on February 26, 2020. Sanborn map coverage was not available for the subject property.

3.3 City Directories

Partner reviewed historical city directories obtained from EDR on February 27, 2020 for past names and businesses that were listed for the subject property and adjacent properties. The findings are presented in the following table:

City Directory Search for 1375 South Woodruff Way (Subject Property)	
Year(s)	**Occupant Listed**
1922-2002	No Listings
2003	Citrus Ford, Citrus Motors Ontario Inc, Citrus Auto Body, Citrus Motors Ontario Service Department
